If only part number changes are required, just change part number directly the part number in the Parts Listing Section.

ELECTRICAL SPECIFICATIONS

Item			32″ LCD COLOUR TV, Model: LC-32GD9E	37″ LCD COLOUR TV, Model: LC-37GD9E
LCD panel			32″ Advanced Super View & BLACK TFT LCD	37″ Advanced Super View & BLACK TFT LCD
Number of dots			3,147,264 dots (1366 × 768 × 3 dots)	
Video Colour System			PAL/SECAM/NTSC 3.58/NTSC 4.43/PAL 60	
TV Function	TV-Standard	Analogue	CCIR (B/G, I, D/K, L, L')	
		Digital	DVB-T (2K/8K OFDM)	
	Receiving Channel	VHF/UHF	E2–E69ch, F2–F10ch, I21–I69ch, IR A–IR Jch, (Digital: E5-E69ch)	
		CATV	Hyper-band, S1–S41ch	
	TV-Tuning System		Auto Preset 99 ch, Auto Label, Auto Sort	
	STEREO/BILINGUAL		NICAM/A2	
Brightness			450 cd/m^2	
Backlight life			60,000 hours (at Backlight Standard position)	
Viewing angles			H : 176° V : 176°	
Audio amplifier			15W × 2	
Speaker			300 × 65 mm (×2)	
Terminals	Rear	Antenna input	UHF/VHF 75Ω Din type (Analogue & Digital)	
		RS-232C	9 pin MINI-DIN male connector	
		EXT 1	SCART (AV input, Y/C input, RGB input, TV output)	
		EXT 2	SCART (AV input/output, Y/C input, RGB input, AV Link)	
		EXT 3	S-VIDEO (Y/C input), RCA pin (AV input)	
		EXT 4	Ø 3.5 mm jack (Audio input), 15 pin mini D-sub (PC/Component)	
		EXT 5	HDMI, Ø 3.5 mm jack (Audio input)	
		EXT 6	HDMI	
		C. I. (Common Interface)	EN50221, R206001	
		OUTPUT	RCA pin (Audio)	
		Headphones	Ø 3.5mm jack (Audio output)	
OSD language			English/German/French/Italian/Spanish/Dutch/Swedish/Portuguese/Finnish/Turkish/Greek/Russian/Polish	
Power Requirement			AC 220–240 V, 50 Hz	
Power Consumption			161 W (0.95 W Standby) (Method IEC60107)	175 W (0.95 W Standby) (Method IEC60107)
Weight			16.7 kg (Display only), 19.2 kg (Display with stand)	20.5 kg (Display only), 23 kg (Display with stand)
Operating temperature			0°C to +40°C	

- As a part of policy of continuous improvement, SHARP reserves the right to make design and specification changes for product improvement without prior notice. The performance specification figures indicated are nominal values of production units. There may be some deviations from these values in individual units.

Cautions regarding use in high and low temperature environments

•When the unit is used in a low temperature space (e.g. room, office), the picture may leave trails or appear slightly delayed. This is not a malfunction, and the unit will recover when the temperature returns to normal.
• Do not leave the unit in a hot or cold location. Also, do not leave the unit in a location exposed to direct sunlight or near a heater, as this may cause the cabinet to deform and the LCD panel to malfunction.
Storage temperature: –20°C to +60°C.

IMPORTANT SERVICE SAFETY PRECAUTION

Service work should be performed only by qualified service technicians who are thoroughly familiar with all safety checks and the servicing guidelines which follow:

WARNING

1. For continued safety, no modification of any circuit should be attempted.
2. Disconnect AC power before servicing.

> **CAUTION**: FOR CONTINUED PROTECTION AGAINST A RISK OF FIRE REPLACE ONLY WITH SAME TYPE
> F701 (4A / 250 V)

BEFORE RETURNING THE RECEIVER (Fire & Shock Hazard)

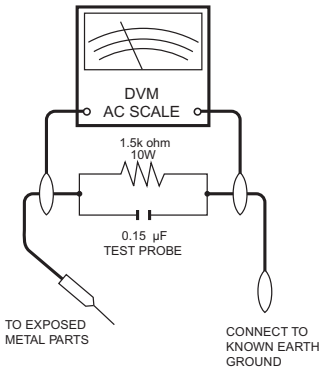
Before returning the receiver to the user, perform the following safety checks:

1. Inspect all lead dress to make certain that leads are not pinched, and check that hardware is not lodged between the chassis and other metal parts in the receiver.
2. Inspect all protective devices such as non-metallic control knobs, insulation materials, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacitor networks, mechanical insulators, etc.
3. To be sure that no shock hazard exists, check for leakage current in the following manner.

• Plug the AC cord directly into a 220~240 volt AC outlet. (Do not use an isolation transformer for this test).
•Using two clip leads, connect a 1.5k ohm, 10 watt resistor paralleled by a 0.15μF capacitor in series with all exposed metal cabinet parts and a known earth ground, such as electrical conduit or electrical ground connected to an earth ground.

- •A true RMS reading multimeter should be used for this test, especially where the equipment uses a switch mode power supply which may result in very non-sinusoidal leakage current.
- •Connect the resistor connection to all exposed metal parts having a return to the chassis (antenna, metal cabinet, screw heads, knobs and control shafts, escutcheon, etc.) and measure the AC voltage drop across the resistor.

All checks must be repeated with the AC cord plug connection reversed. (If necessary, a nonpolarized adaptor plug must be used only for the purpose of completing these checks.)
Any reading of 1.05V peak (this corresponds to 0.7 mA. peak AC.) or more is excessive and indicates a potential shock hazard which must be corrected before returning the monitor to the owner.



SAFETY NOTICE

Many electrical and mechanical parts in LCD television have special safety-related characteristics.
These characteristics are often not evident from visual inspection, nor can protection afforded by them be necessarily increased by using replacement components rated for higher voltage, wattage, etc.
Replacement parts which have these special safety characteristics are identified in this manual; electrical components having such features are identified by "⚠".

For continued protection, replacement parts must be identical to those used in the original circuit.
The use of a substitute replacement parts which do not have the same safety characteristics as the factory recommended replacement parts shown in this service manual, may create shock, fire or other hazards.

PRECAUTIONS FOR USING LEAD-FREE SOLDER

1 Employing lead-free solder

"ALL PWB" of this model employs lead-free solder. The LF symbol indicates lead-free solder, and is attached on the PWBs and service manuals. The alphabetical character following LF shows the type of lead-free solder.
Example:

Indicates lead-free solder of tin, silver and copper.

In the case of LC-37GD9E, for the Inverter PWB Units the type used is nickel, so they are marked as LFn:

Indicates lead-free solder of tin, silver and nickel.

2 Using lead-free wire solder

When fixing the PWB soldered with the lead-free solder, apply lead-free wire solder. Repairing with conventional lead wire solder may cause damage or accident due to cracks.
As the melting point of lead-free solder (Sn-Ag-Cu) is higher than the lead wire solder by 40°C, we recommend you to use a dedicated soldering bit, if you are not familiar with how to obtain lead-free wire solder or soldering bit, contact our service station or service branch in your area.

3 Soldering

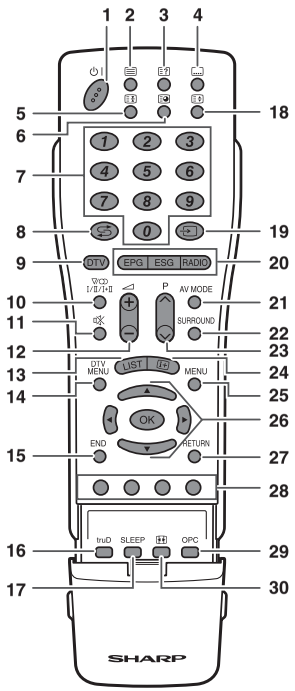
As the melting point of lead-free solder (Sn-Ag-Cu) is about 220°C which is higher than the conventional lead solder by 40°C, and as it has poor solder wettability, you may be apt to keep the soldering bit in contact with the PWB for extended period of time. However, Since the land may be peeled off or the maximum heat-resistance temperature of parts may be exceeded, remove the bit from the PWB as soon as you confirm the steady soldering condition.
Lead-free solder contains more tin, and the end of the soldering bit may be easily corroded. Make sure to turn on and off the power of the bit as required.
If a different type of solder stays on the tip of the soldering bit, it is alloyed with lead-free solder. Clean the bit after every use of it.
When the tip of the soldering bit is blackened during use, file it with steel wool or fine sandpaper.

Be careful when replacing parts with polarity indication on the PWB silk.

Lead-free wire solder for servicing.

Part No.	★	Description	Code
ZHNDAi123250E	J	ϕ0.3mm 250g(1roll)	BL
ZHNDAi126500E	J	ϕ0.6mm 500g(1roll)	BK
ZHNDAi12801KE	J	ϕ1.0mm 1kg(1roll)	BM

Remote control unit



1 ⏻ | **(Standby/On)**
Enter standby mode or turn on the power. (See page 8.)

2 **(Teletext)**
Select the TELETEXT mode. (all TV image, DTV/DATA image, all TEXT image, TV/TEXT image) (See pages 21 and 31.)
DTV: Select DTV data broadcasting and TELETEXT.

3 **(Reveal hidden Teletext)**
(See page 21.)

4 **(Subtitle for Teletext)**
TV/External: To turn the subtitles on and off. (See page 21.)
DTV: Display the subtitle selection screen. (See page 31.)

5 **(Freeze/Hold)**
(See page 21.)

6 **(Subpage)**
(See page 21.)

7 **0–9**
Set the channel in TV and DTV mode.
Set the page in Teletext mode.

8 **(Flashback)**
Press to return to the previous image in normal viewing mode. (Will not work while operating in EPG/ESG screen.)

9 **DTV**
Press to access DTV mode while watching other input sources, and vice versa.
(This button will not work if you were watching DTV immediately before turning off the TV. In this case first select any other input source except DTV using the ⏎ button.)

10 **(Sound mode)**
Select the sound multiplex mode. (See below.)

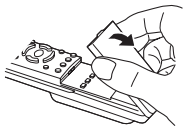
11 **(Mute)**
Switch the sound on and off.

12 **(+/−) (Volume)**
(+) Increase the volume.
(−) Decrease the volume.

13 **LIST**
DTV: Display the programme list.

14 **DTV MENU**
Display DTV Menu screen.

15 **END**
Exit the menu screen.



16 **truD**
Demonstrate the truD effects in a dual screen format. (See page 14.)

17 **SLEEP**
Set the sleep timer in units of 30 min. up to max. 2hr. 30min.

18 **(Top/Bottom/Full)**
Set the area of magnification in Teletext mode. (See page 21.)

19 **(INPUT SOURCE)**
Select an input source.
(TV, DTV, EXT1, EXT2, EXT3, EXT4, EXT5, EXT6) (See page 9.)

20 **EPG**
DTV: To display EPG (Electronic Programme Guide) screen.
ESG
DTV: To display ESG (Electronic Service Guide) screen.
RADIO
DTV: Switch between RADIO and DTV mode.

21 **AV MODE**
Select a video setting. (See page 13.)

22 **SURROUND**
Switch the surround effects on and off.

23 **P (∧/∨)**
TV/DTV: Select the channel.
External: Switch to TV or DTV input mode.
Teletext: Move to the next/previous page.

24 **(Display information)**
(See pages 21, 29 and 30.)

25 **MENU**
Display the MENU screen.
(See page 11.)

26 **▲/▼/◀/▶ (Cursor)**
Select a desired item on the setting screen.

OK
Execute a command within the menu screen.
Display the programme list.

27 **RETURN**
Return to the previous menu screen.

28 **Colour (Red/Green/Yellow/Blue)**
TELETEXT: Select a page. (See page 21.)
DTV: The coloured buttons are used to select correspondingly to the coloured items in the menu screen.

29 **OPC**
To switch the Optical Picture Control on and off. (See page 13.)

30 **(WIDE MODE)**
Select the wide mode.
(See page 20.)

Using ▽◁▷ I/II/I+II on the remote control unit

DTV mode:

Press ▽◁▷ I/II/I+II to open the multi audio screen. (See page 31.)

Analogue TV mode:

Each time you press ▽◁▷ I/II/I+II, the mode switches as illustrated in the following tables.

NICAM TV broadcasts selection

Signal	Selectable items
Stereo	NICAM STEREO, MONO
Bilingual	NICAM CH A, NICAM CH B, NICAM CH AB, MONO
Monaural	NICAM MONO, MONO

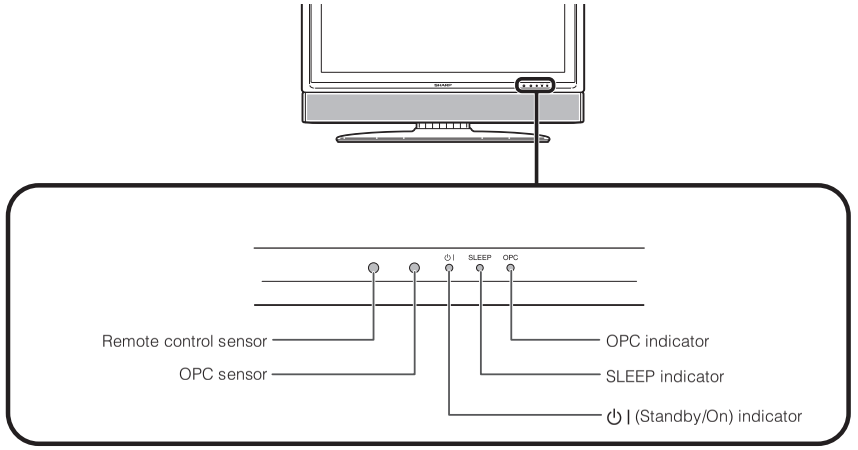
A2 TV broadcasts selection

Signal	Selectable items
Stereo	STEREO, MONO
Bilingual	CH A, CH B, CH AB
Monaural	MONO

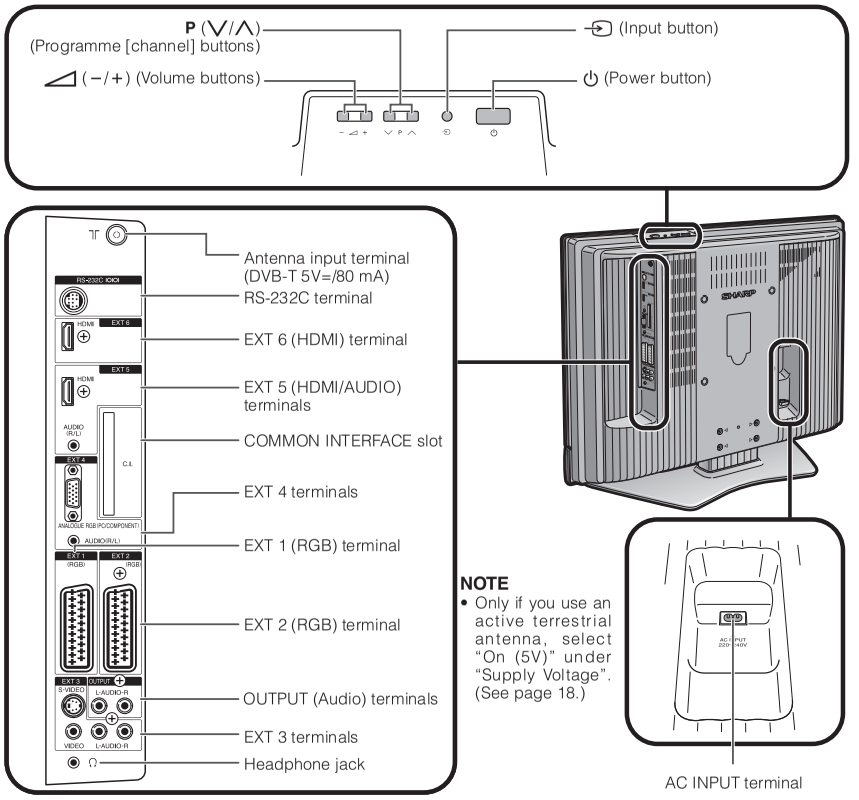
NOTE

- When no signal is input, the sound mode will display “MONO”.

TV (Front view)



TV (Rear view)



NOTE

- Only if you use an active terrestrial antenna, select “On (5V)” under “Supply Voltage”. (See page 18.)

Using external equipment

Setting the input source

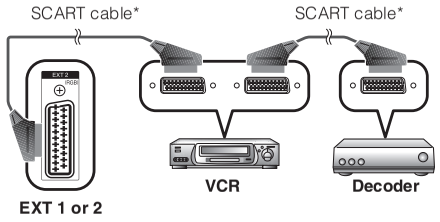
To view external source images, select the input source using ⏎ on the remote control unit or TV.

NOTE

- The cables marked with * are commercially available items.

Connecting a VCR

You can use the EXT 1 or 2 terminals when connecting a VCR and other audiovisual equipment.
If your VCR supports TV-VCR advanced AV Link systems, you can connect the VCR to the EXT 2 terminal of the TV using the fully-wired SCART cable.

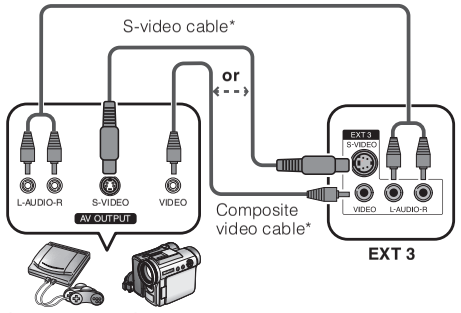


NOTE

- TV-VCR advanced AV Link systems may not be compatible with some external sources.
- TV-OUT from EXT 1 is not outputted when EXT 5 (HDMI), EXT 6 (HDMI) or DTV is selected as the input.

Connecting a game console or camcorder

A game console, camcorder and some other audiovisual equipment are conveniently connected using the EXT 3 terminals.

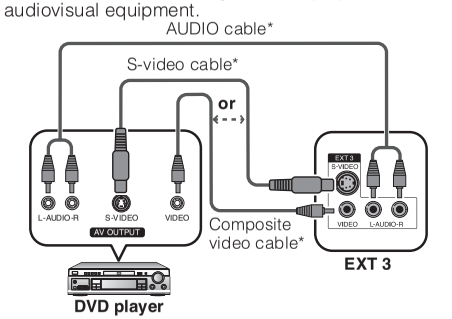


NOTE

- EXT 3: The S-video terminal has priority over the video terminals.
- You can connect the game console to EXT 1 or 3 terminals to enjoy clearer picture.

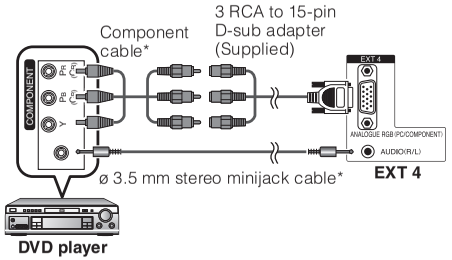
Connecting a DVD player

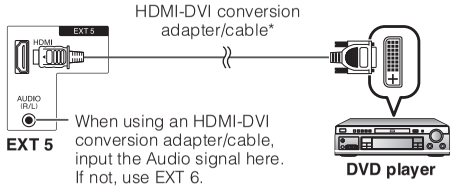
You can use the EXT 3, 4, 5 (HDMI) or 6 (HDMI) terminals when connecting to a DVD player and other audiovisual equipment.

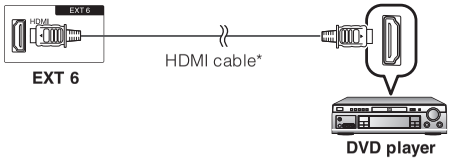


NOTE

- EXT 3: The S-video terminal has priority over the video terminals.





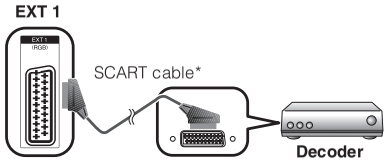


NOTE

- When connecting an HDMI-DVI conversion adapter/cable to the HDMI terminal, the image may not come in clearly.

Connecting a decoder

You can use the EXT 1 terminal when connecting a decoder and other audiovisual equipment.

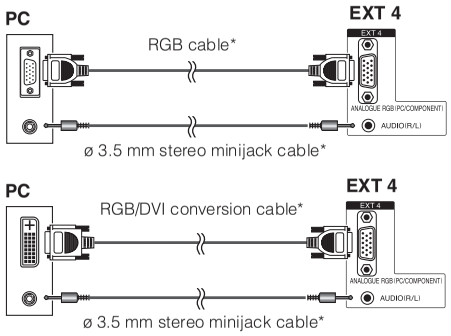


NOTE

- In cases when the decoder needs to receive signal from the TV, make sure to set "Decoder" to "EXT1" in the Programme Setup "Manual Adjust" menu. (See page 16.)
- Do not connect the decoder to the EXT 2 terminal.

Connecting a PC

Use the EXT 4 terminals to connect a PC.



NOTE

- The cables marked with * are commercially available items.
- The PC input terminals are DDC1/2B-compatible.
- Refer to page 33 for a list of PC signals compatible with the TV.
- Macintosh adaptor may be required for use for some Macintosh computers.
- When connecting to a PC, the correct input signal type is automatically detected.

Using AV Link function

This TV incorporates four typical AV Link functions for smooth connections between the TV and other audiovisual equipment.

One Touch Play

While the TV is in standby mode, it automatically turns on and plays back the image from the audiovisual source (e.g. VCR, DVD).

WYSIWYR (What You See Is What You Record)

When the remote control unit of the connected VCR has the WYSIWYR button, you can automatically start recording by pressing the WYSIWYR button.

Preset Download

Automatically transfers the channel preset information from the tuner on the TV to the one on the connected audiovisual equipment (e.g. VCR) via the EXT 2 terminal.

NOTE

- Refer to operation manuals of each external equipment for the details.
- Only works when the audiovisual equipment is connected to the EXT 2 terminal on the TV with AV Link via a fully wired SCART.
- The use of the AV Link function is only possible if the TV-set has enforced a complete auto-installation with the connected audiovisual equipment (page 8, Initial auto installation).
  The availability of the AV Link function depends on the audiovisual equipment used. Depending on the manufacturer and type of equipment used, it is possible that the described functions may be completely or partially unusable.

Quick guide

Attaching the stand

Before performing work spread cushioning over the base area to lay the TV on, making sure the area is completely flat. This will prevent it from being damaged.

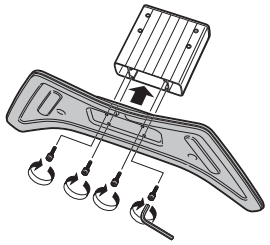
Before attaching (or detaching) stand, unplug the AC cord from the AC INPUT terminal.

1 Confirm the 8 screws supplied with the TV.

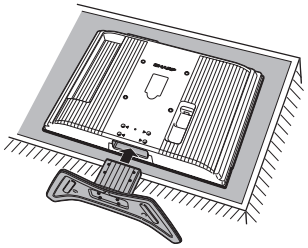
Short screws (×4)
(used in step 2)

Long screws (×4)
(used in step 4)

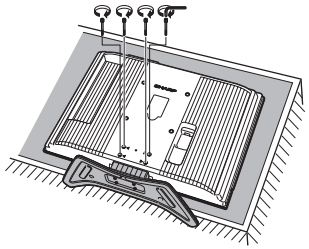
2 Attach the two parts of the stand unit to each other using the 4 short screws as shown.



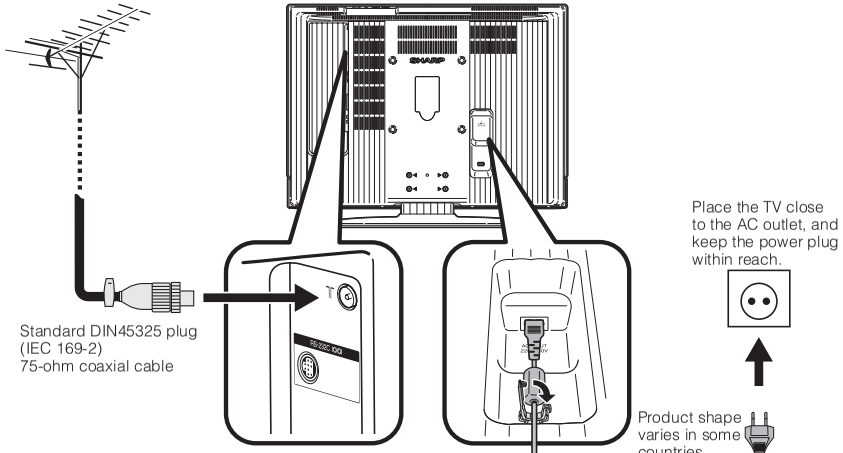
3 Insert the stand into the opening on the bottom of the TV.



4 Insert and tighten the 4 long screws on the rear of the TV as shown.



Setting the TV



Antenna
Connect the antenna cable from your antenna-/cable socket or the (room-/roof) antenna for antenna input terminal on the back of your TV set to receive digitally/terrestrially broadcast stations.

Appendix

Troubleshooting

Problem	Possible Solution
• No power.	• Check if you pressed ⏻ | on the remote control unit. (See page 8.) If the indicator on the TV lights up red, press ⏻ |. • Is the AC cord disconnected? (See page 4.) • Check if you pressed ⏻ on the TV. (See page 8.)
• Unit cannot be operated.	• External influences such as lightning, static electricity, etc., may cause improper operation. In this case, operate the unit after first turning the power off, or unplugging the AC cord and re-plugging it in after 1 or 2 minutes.
• Remote control unit does not operate.	• Are batteries inserted with polarity (+, −) aligned? (See page 5.) • Are batteries worn out? (Replace with new batteries.) • Are you using it under strong or fluorescent lighting? • Is a fluorescent light illuminated to remote control sensor?
• Picture is cut off.	• Is the image position correct? (See page 18.) • Are screen mode adjustments (4:3 Mode/WSS) such as picture size made correctly? (See pages 18 and 20.)
• Strange colour, light colour, or dark, or colour misalignment.	• Adjust the picture tone. (See pages 13 and 14.) • Is the room too bright? The picture may look dark in a room that is too bright. • Check the colour system setting. (See pages 16 and 19.) • Check the HDMI Setup setting. (See page 19.)
• Power is suddenly turned off.	• The unit's internal temperature has increased. Remove any objects blocking vent or clean. • Check the power control setting. (See page 15.) • Is sleep timer set? Press **SLEEP** on the remote control unit until it sets to Off.
• No picture.	• Is connection to other components correct? (See pages 9 and 10.) • Is input signal type selected correctly after connection? (See page 19.) • Is the correct input source selected? (See page 9.) • Is non-compatible signal being input? (See page 33.) • Is picture adjustment correct? (See pages 13 and 14.) • Is the antenna connected properly? (See page 4.) • Is "On" selected in "Audio Only"? (See page 18.)
• No sound.	• Is the volume too low? (See pages 6 and 7.) • Make sure that headphones are not connected. (See page 7.) • Check if you pressed 🔇 on the remote control unit. (See page 6.)
• The DTV menu screen is displayed in monochrome and hard to select the item.	• Check if "Monochrome" is set to "On". If so, set it to "Off". (See page 14.)

Cautions regarding use in high and low temperature environments

- When the unit is used in a low temperature space (e.g. room, office), the picture may leave trails or appear slightly delayed. This is not a malfunction, and the unit will recover when the temperature returns to normal.
- Do not leave the unit in a hot or cold location. Also, do not leave the unit in a location exposed to direct sunlight or near a heater, as this may cause the cabinet to deform and the LCD panel to malfunction.
  Storage temperature: –20°C to +60°C.

PC compatibility chart

Resolution		Horizontal Frequency	Vertical Frequency	VESA Standard
VGA	640 × 480	31.5 kHz	60 Hz	✓
SVGA	800 × 600	37.9 kHz	60 Hz	✓
XGA	1024 × 768	48.4 kHz	60 Hz	✓

VGA, SVGA and XGA are registered trademarks of International Business Machines Co., Inc.

NOTE

- This TV has only limited PC compatibility, correct operation can only be guaranteed if the video card conforms exactly to the VESA 60Hz standard. Any variations from this standard will result in picture distortions.

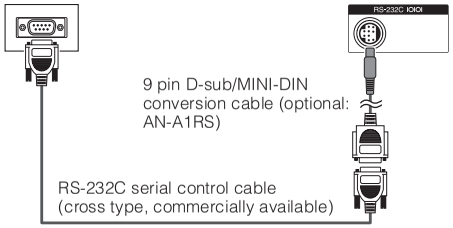
RS-232C port specifications

PC Control of the TV

- When a program is set, the TV can be controlled from the PC using the RS-232C terminal.
  The input signal (PC/video) can be selected, the volume can be adjusted and various other adjustments and settings can be made, enabling automatic programmed playing.
- Attach an RS-232C cable cross-type (commercially available) to a 9 pin D-sub/MINI-DIN (optional: AN-A1RS) for the connections.

NOTE

- This operation system should be used by a person who is accustomed to using PCs.



Communication conditions

Set the RS-232C communications settings on the PC to match the TV's communications conditions. The TV's communications settings are as follows:

Baud rate:	9,600 bps
Data length:	8 bits
Parity bit:	None
Stop bit:	1 bit
Flow control:	None

Communication procedure

Send the control commands from the PC via the RS-232C connector.
The TV operates according to the received command and sends a response message to the PC.
Do not send multiple commands at the same time. Wait until the PC receives the OK response before sending the next command.

Command format

Eight ASCII codes + CR

C1	C2	C3	C4	P1	P2	P3	P4	↵

Command 4-digits | Parameter 4-digits | Return code

Command 4-digits: Command. The text of four characters.
Parameter 4-digits: Parameter 0 – 9, ×, blank, ?

Parameter

Input the parameter values, aligning left, and fill with blank(s) for the remainder. (Be sure that four values are input for the parameter.)
When the input parameter is not within an adjustable range, "ERR" returns. (Refer to "Response code format".)

0			
0	0	0	9
–	3	0	
1	0	0	
0	0	5	5

When "?" is input for some commands, the present setting value responds.

?			
?	?	?	?

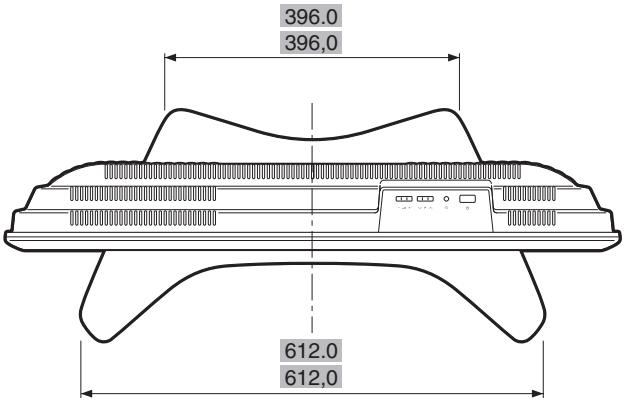
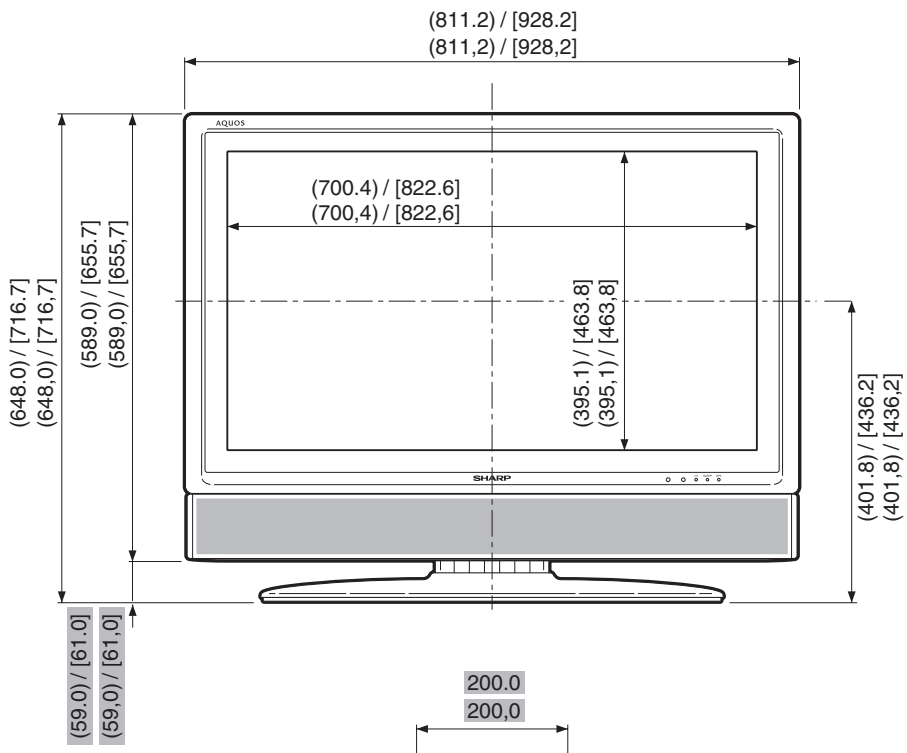
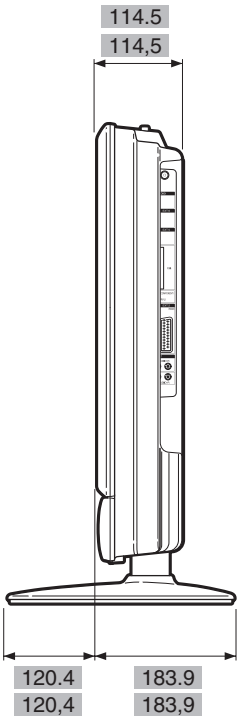
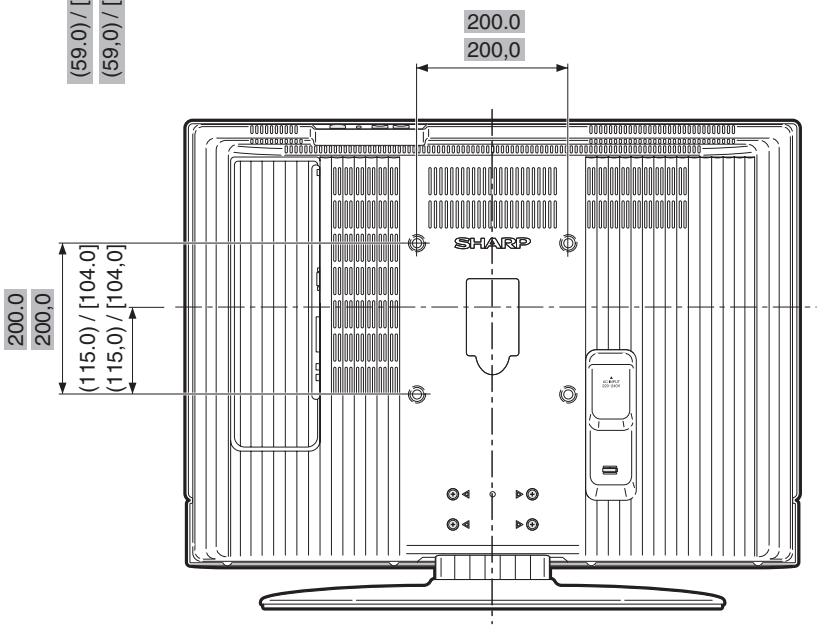
DIMENSIONS

( ) : LC-32GD9E
[ ] : LC-37GD9E
: LC-32/37GD9E



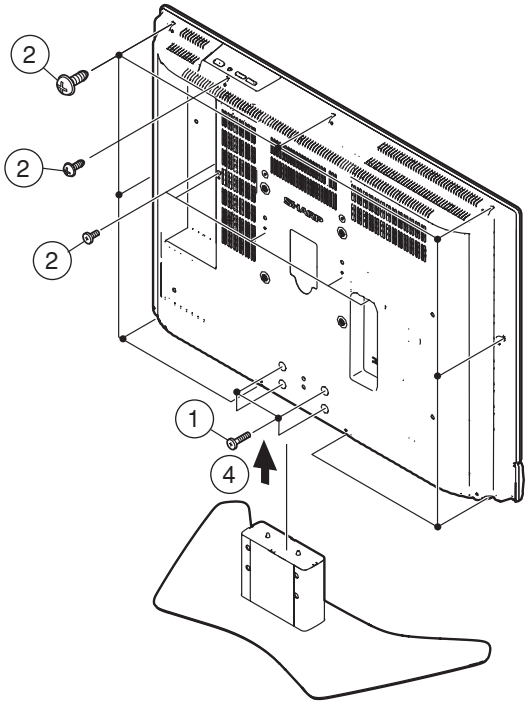


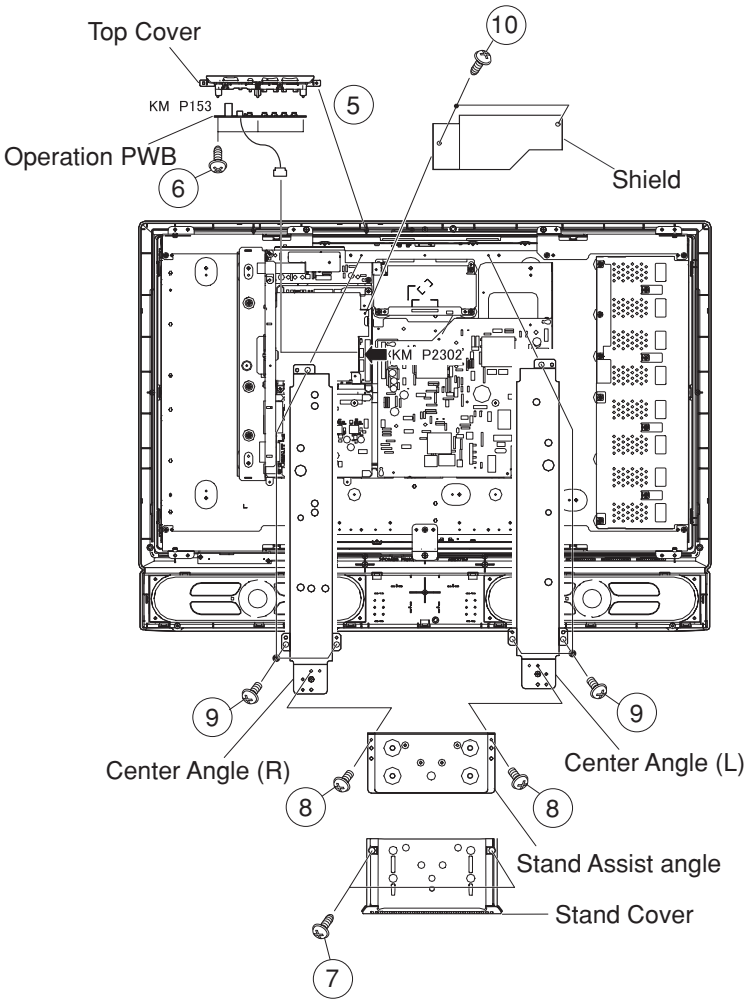




REMOVING OF MAJOR PARTS

1. Remove the stand fixing screws (4 pcs.).
2. Remove the terminal screws (6 pcs.).
3. Remove the cabinet B fixing screws (9 pcs.).
4. Remove the cabinet B after opening from the direction of an arrow.
5. Remove the top cover ass'y.
6. Remove the operation PWB fixing screws (3 pcs.).
7. Remove the stand cover fixing screws (2 pcs.).
8. Remove the stand assist angle fixing screws (2 pcs.).
9. Remove the 6 lock screws from the right and left center angles and take out both center angles.
10. Remove the Shield screws (2 pcs.).

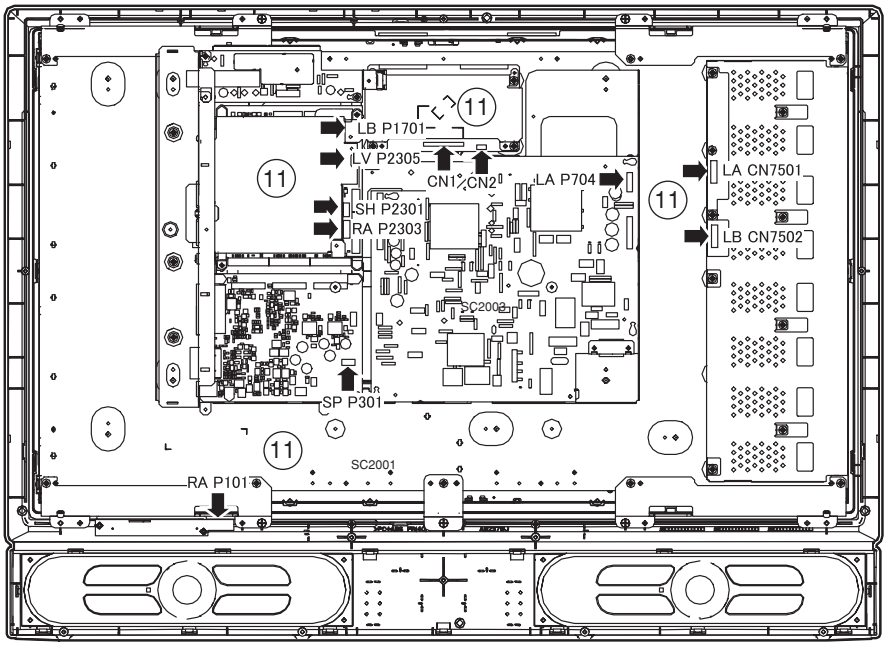




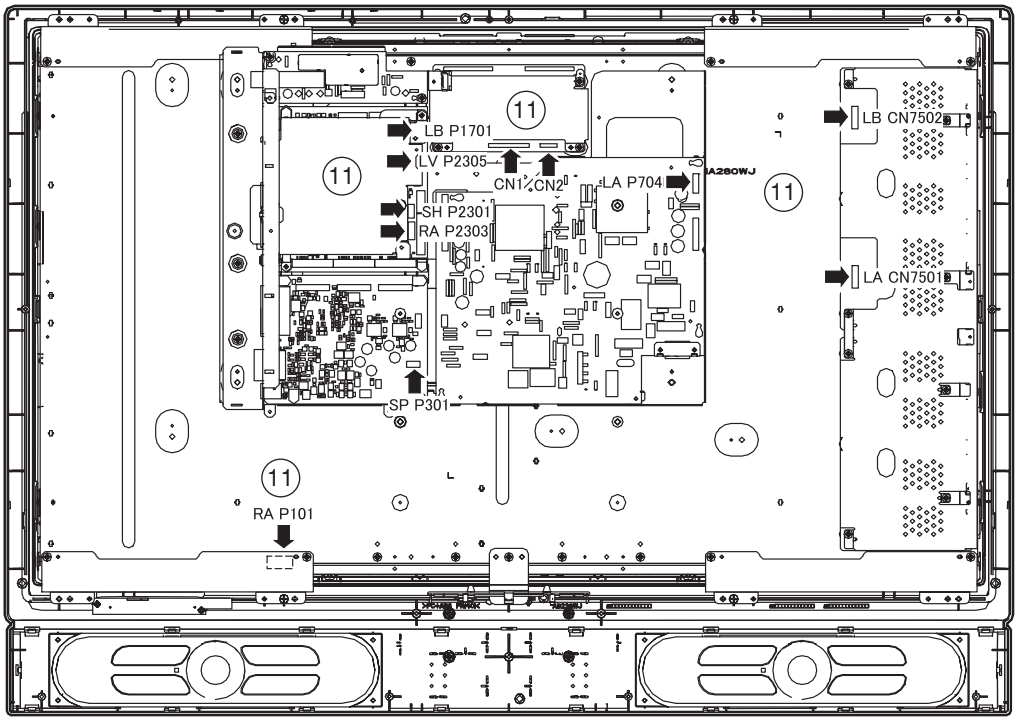
Removing of Major Parts (Continued)

11. Disconnect all the connectors from all the PWBs.

LC-32GD9E

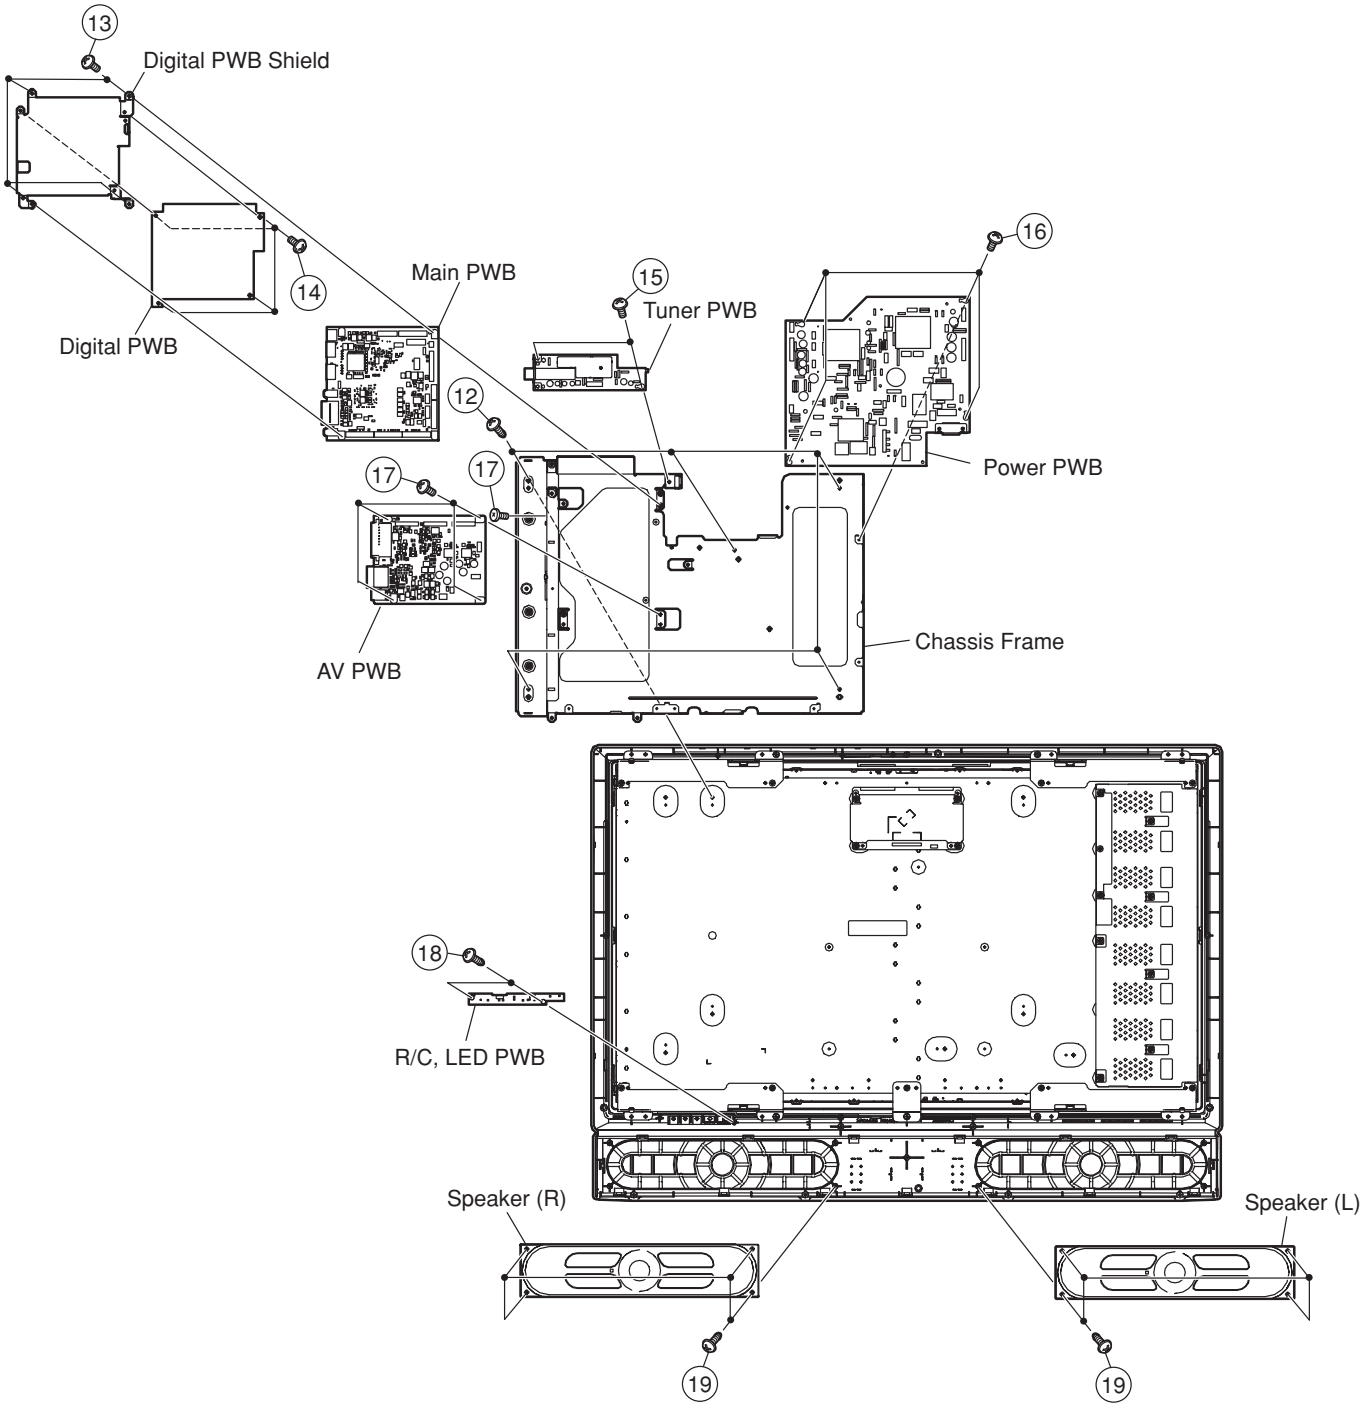


LC-37GD9E



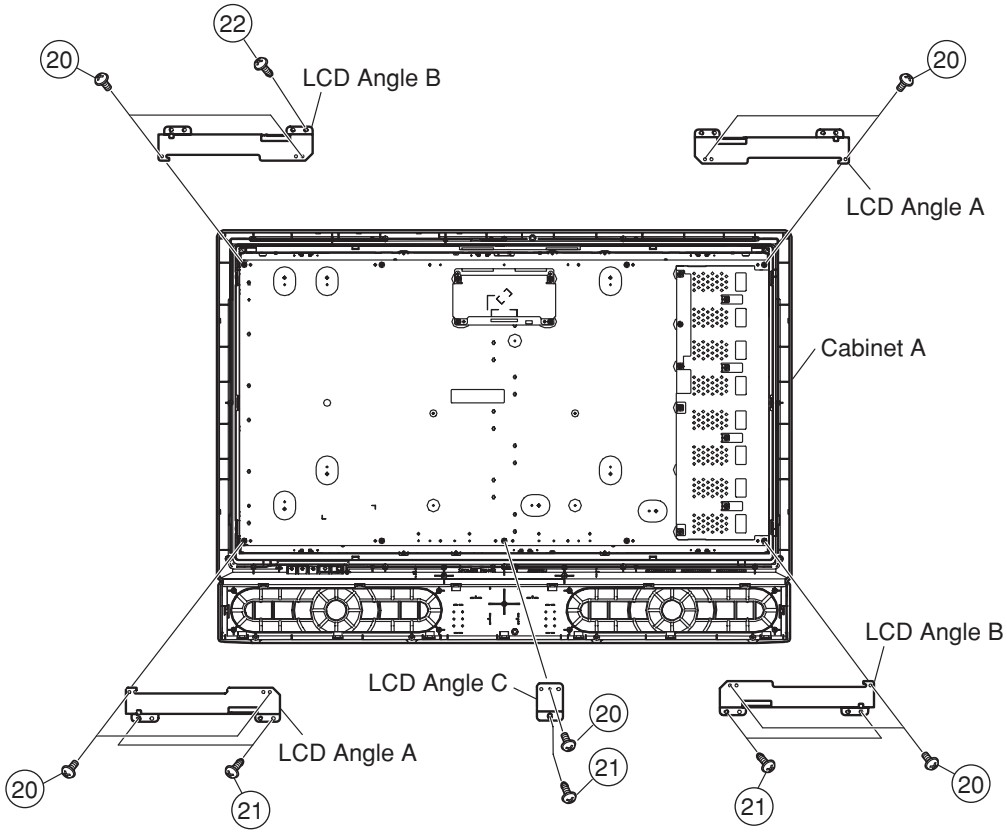
Removing of Major Parts (Continued)

12. Remove the chassis frame fixing screws (5 pcs.).
13. Remove the Digital PWB with Digital PWB Shield fixing screws (4 pcs.).
14. Remove the Digital PWB from Digital PWB Shield (4 pcs.).
15. Remove the tuner PWB fixing angle fixing screws (2 pcs.).
16. Remove the power PWB fixing screws (4 pcs.).
17. Remove the AV PWB fixing screws (5 pcs.).
18. Remove the R/C,LED PWB fixing screws (3 pcs.).
19. Remove the 8 lock screws from the right and left speakers and take out both speakers.



Removing of Major Parts (Continued)

20. Remove the LCD angle to LCD Panel fixing screws (9 pcs.).
21. Remove the LCD angle to Cabinet-A fixing screws (5 pcs.).
22. Remove the LCD angle to Cabinet-A fixing screws (1 pcs.) (Only for LC-37GD9E).



SERVICE ADJUSTMENTS

The adjustment values are set to their optimum at the factory before shipping. If by any chance a value should become improper or a readjustment is required due to part replacement, make an adjustment according to the following procedure.

1. Entering and exiting the adjustment process mode

1- Unplug the AC power cord of TV set to force power off.
2- While holding down the “VOL (–)” and “INPUT” keys on the set at once, plug in the AC power cord to turn on the set. The letter K appears on the screen. (Factory mode)
3- Next, hold down the “VOL (—)” and “P (V)” keys on the set at once. Multiple lines of orange characters appearing on the screen indicate that the set is now in the adjustment process mode. If you fail to enter the adjustment process mode (the display is the same as normal start up), retry the procedure.
4- To exit the adjustment process mode after the adjustment is done, unplug the AC power cord to force off the power. (When the power is turned off by the remote controller, unplug also the AC power cord and wait for 10 seconds before plug it in again.)
5- To remove “K” mode, just repeat steps 1 and 2. This time the letter K disappears from screen.

Caution: Use due care in handling the information described here lest the users should know how to enter the adjustment process mode. If the settings tampered with in this mode, unrecoverable system damage may result.

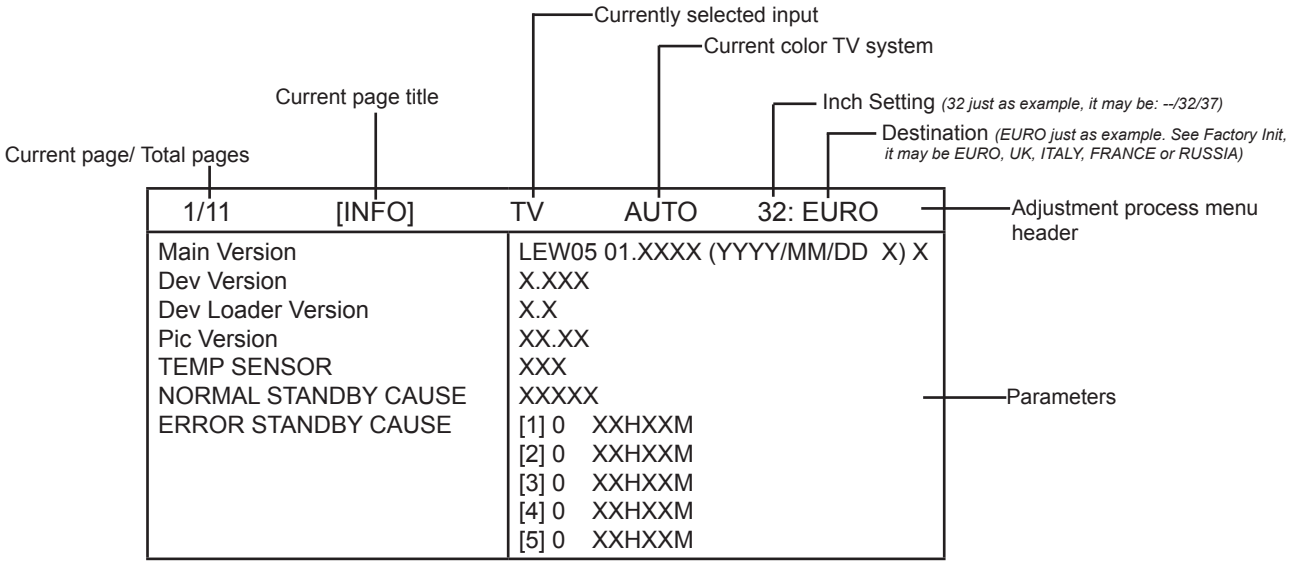
2. Remote Controller Key Operation and Description of Display in Adjustment Process Mode

2.1 Key operation

Remote controller key	Main unit key	Function
P (Λ / V)	P (Λ / V)	Moving an item (line) by one (UP/DOWN)
VOL (+/-)	VOL (+/-)	Changing a selected item setting (+1/-1)
Cursor (UP / DOWN)	————	Turning a page (PREVIOUS / NEXT)
Cursor (LEFT / RIGHT)	————	Changing a selected line setting (+10/-10)
INPUT SOURCE on remote controller	INPUT button	Input source switching (toggle switching) (TV→DTV→EXT1→EXT2→EXT3→EXT4→EXT5→EXT6) (Not Operative)
OK	————	Executing a function

Input mode is switched automatically when relevant adjustment is started so far as the necessary input signal available.

2.2 Description of display



3. Adjustment process mode menu

The character string in brackets [ ] will appear as a page title in the adjustment process menu header.

Page	Line	Item	Description	Remarks (Adjustment detail, etc.)
1/11		[INFO]		
	1	Main Version	1.xxx (xx/xx/xxxx) x	Main microprocessor version (VCTP)
	2	Dev Version	x.xxx	Digital Module version
	3	Dev Loader Version	x.x	Digital Module loader version
	4	PIC Version	xx.xx	PIC version
	5	TEMP SENSOR	xxx	Temp inside cabinet (near panel)
	6	NORMAL STANDBY CAUSE	[X]0	Last status which cause standby
	7	ERROR STANDBY CAUSE	xxHxxM (X5)	Error standby cause Total operating time before error
2/11		[INIT]		
	1	Factory Init	(--/EURO/UK/ITALY/FRANCE/RUSSIA)ENTER	Initialization to factory settings
	2	Inch Setting	(--/26/32/37/45)	Initialization data for different panel sizes
	3	PUBLIC MODE	OFF/ON	PUBLIC MODE flag setting

4. Special Features

- ERROR STAND-BY CAUSE (Page 1/11)
  When the unit enters standby due to operational error, total time before the error and the cause of error is recorded on EEPROM, if possible. The values can be used to locate the fault for repair.
- EEP CLEAR (Page 10/11)
  Restore NVM data to default values.
- EEP CLEAR B (Page 10/11)
  Restore NVM data to default values except adjustment data.

5. Video Signal Adjustment Procedure

The adjustment process mode menu is listed in Section 3.

5.1. Signal check

Signal generator level adjustment check (Adjustment to the specified level).

- Composite signal PAL : 0.7Vp-p ± 0.02Vp-p (Pedestal to white level)
- 15K Component signal (50Hz) (576i/50Hz) : Y level 0.7Vp-p ± 0.02Vp-p (Pedestal to white level)
  PB, PR level 0.7Vp-p ± 0.02Vp-p

5.2. Entering the adjustment process mode

Enter the adjustment process mode according to Section 1.

5.3. RF AGC Adjustment

	Adjustment Point	Adjustment conditions	Adjustment procedure
1	Setting	[Signal] PAL Field Color Bar RF signal [Terminal] TUNER	• Feed the PAL color bar signal (E-12ch) to TUNER. Signal level: 50 ±1dB µV (75Ω LOAD) [TUNER]  ↑ 100% white
2	Auto adjustment performance	Adjustment process page 3.	Bring the cursor on [▪RF AGC ADJ] and press [OK]. [▪RF AGC ADJ OK] appears when finished.

5.4. RF AGC Adjustment (SMPTE RF SIGNAL- Alternative Method)

	Adjustment Point	Adjustment conditions	Adjustment procedure
1	Setting	[Signal] PAL SMPTE Field Color Bar RF signal [Terminal] TUNER	• Feed the PAL SMPTE color bar signal (E-12ch) to TUNER. Signal level: 50 ±1dB µV (75Ω LOAD) [TUNER]  ↑ 100% white
2	Auto adjustment performance	Adjustment process page 6.	Bring the cursor on [▪RF AGC ADJ] and press [OK]. [▪RF AGC ADJ OK] appears when finished.

5.5. PAL Signal & Tuner Adjustment

	Adjustment Point	Adjustment conditions	Adjustment procedure
1	Setting	[Signal] PAL FULL Field Color Bar Composite or RF signal [Terminal] EXT3 VIDEO IN TUNER	• Feed the PAL full field color bar signal (75% color saturation) to EXT3 VIDEO IN. • Feed the RF signal PAL color bar (E-12) to TUNER. • Make sure the PAL color bar pattern (E-12) has the sync level of 7:3 with the picture level. [EXT 3] [TUNER]  ↑ 100% white ↑ 100% white
2	Auto adjustment performance	Adjustment process page 3.	Bring the cursor on [▪PAL +TUNER ADJ] and press [OK]. [▪PAL+ TUNER ADJ OK] appears when finished.

5.6. PAL Signal & Tuner Adjustment (SMPTE RF SIGNAL-Alternative Method)

	Adjustment Point	Adjustment conditions	Adjustment procedure
1	Setting	[Signal] PAL FULL Field Color Bar Composite or RF SMPTE signal [Terminal] EXT3 VIDEO IN TUNER	• Feed the PAL full field color bar signal (75% color saturation) to EXT3 VIDEO IN. • Feed the RF signal SMPTE color bar (E-12) to TUNER. • Make sure the SMPTE color bar pattern (E-12) has the sync level of 7:3 with the picture level. [EXT 3] [TUNER]  ↑ 100% white ↑ 100% white
2	Auto adjustment performance	Adjustment process page 6.	Bring the cursor on [▪PAL +TUNER ADJ] and press [OK]. [▪PAL+ TUNER ADJ OK] appears when finished.

5.7. ADC Adjustment (Component 15K)

	Adjustment Point	Adjustment conditions	Adjustment procedure
1	Setting	[Signal] (576i/50) COMP 15K, 50Hz 100% Full Field Color Bar [Terminal] EXT4 [COMPONENT]	• Feed the COMPONENT 15K 100% full field color bar signal (100% color saturation) to EXT4 COMPONENT IN. [EXT 4]  ← Black ↑ 100% white
2	Auto adjustment performance	Adjustment process page 4.	Bring the cursor on [▪COMP15K ADJ] and press [OK]. [▪COMP15 ADJ OK] appears when finished.

6. White Balance Adjustment

Adjustment procedure Page 7/11 shows the value of adjustment gradation (IN value) and Adjustment procedure Page 8/11 & 9/11 show adj. offset value (initial value : 0). White balance adjustment is executed adjusting the adj. offset value, indicated on Page 8/11 & 9/11.

Condition of the inspection: • Backlight: MAX (+8) [DYNAMIC]
• Colorimeter at screen centre
Adjustment reference device: Minolta CA-210
Tolerance adjustment spec. ±0.004, Inspection spec. : ±0.006 (GAMMA 1)
Tolerance adjustment spec. ±0.002, Inspection spec. : ±0.004 (GAMMA 2...6)

Adjustment: Check that the values on page 7/11 of process adjustment are set as below. If not, change them accordingly.

M GAMMA IN 1	160	M GAMMA IN 2	320
M GAMMA IN 3	480	M GAMMA IN 4	640
M GAMMA IN 5	800	M GAMMA IN 6	960

1- Display the current adjustment status at point 6. (Page 9/11 of process adjustment)
The pattern for checking the adjustment status is toggled by pressing the “6” button on the remote control. (Normal OSD display -> “6” -> pattern for check (OSD disappears) -> “6” -> normal OSD display -> …)

2- Read the value of the luminance meter.

3- Change M GAMMA R6/M GAMMA B6 (adjustment offset value) on page 9/11 of process adjustment so that the values of the luminance meter approach **x = 0.272** and **y = 0.277.**
(Basically, G is not changed. If adjustment fails only with R and B, then G should be reduced. In this case, the weaker of R and B must be fixed.)

4- If G is changed in step “3”, change the values of M GAMMA G1 - M GAMMA G5 on pages 8/11 and 9/11 of process adjustment as follows. When not changed, go to step “5”.

Offset value of M GAMMA G1 = (Offset value of M GAMMA G6)*(160/960)
Offset value of M GAMMA G2 = (Offset value of M GAMMA G6)*(320/960)
Offset value of M GAMMA G3 = (Offset value of M GAMMA G6)*(480/960)
Offset value of M GAMMA G4 = (Offset value of M GAMMA G6)*(640/960)
Offset value of M GAMMA G5 = (Offset value of M GAMMA G6)*(800/960)

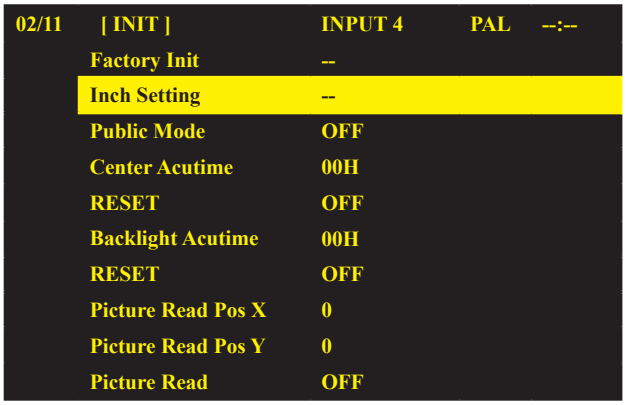
5- Display the adjustment status of the current point 5. (Each time the “5” button on the remote control is pressed, the adjustment status check pattern is toggled.)
(Normal OSD display -> “5” -> Pattern display (OSD disappears) -> “5” -> Normal OSD display ->…)

Change M GAMMA R5/M GAMMA B5 (adjustment offset value) on page 9/11 of process adjustment so that the values of the luminance meter approach **x = 0.272** and **y = 0.277.**

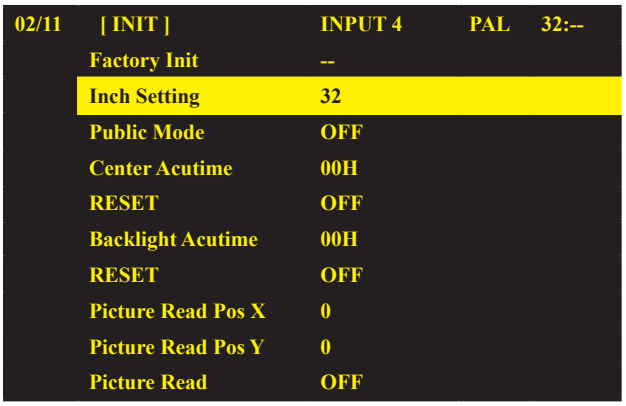
6- Repeat step “5” for GAMMA points 4, 3, 2, and 1.

7. QS Temperature NVM Data Confirmation

During servicing of the LCD TV set , by software upgrading or by any cleaning NVM, it’s mandatory select the “Inch Setting” in Service Mode, Page 2, according to the size of the TV set.



Default picture after cleaning NVM.



Picture with [Inch Setting] to 32.

8. Initialization to factory settings

Caution: When the factory settings have been made, all user setting data, including the channel settings, are initialized. (The adjustments done in the adjustment process mode are not initialized.) Keep this in mind when initializing these settings.

	Adjustment item	Adjustment conditions	Adjustment procedure
1	Factory settings	See to below caution	● Enter the adjustment process mode. ● Bring the cursor on to [FACTORY INIT] on page 2/11. ● Use the [Volume + -] key to select a region from [EURO/UK/ITALY/ FRANCE/RUSSIA] and press [ENTER]. “EXECUTING” appears and initialization starts.After a while, “***OK***” appears and the setting is complete. **Note: Never turn the power off during initialization.**
			The following settings will be back to their factory ones. 1. User settings 2. Channel data (e.g. broadcast frequencies) 3. Password data

After adjustments, exit the adjustment process mode.
To exit the adjustment process mode, unplug the AC power cord from the outlet to forcibly turn off the power. When the power is turned off with the remote control, unplug the AC power cord and plug it back in (wait approximately 10 seconds before plugging in the AC power cord).

9. Lamp error detection

9.1. Functional description

This LCD colour television has a function (lamp error detection) to be turned OFF automatically for safety when the lamp or lamp circuit is abnormal.
If the lamp or lamp circuit is abnormal, or some other errors happen, and the lamp error detection is executed, the following occur.
1- The main unit of television is turned OFF 5 seconds after it is turned ON. (The power LED on the front side of TV turns from green to red.)
2 - If the situation “1” happens 5 times sequentially, television can not be turned ON. (The power LED remains red.)

9.2. Countermeasures

When television is turned OFF by the lamp error detection mentioned above, it enters the adjustment process with the power LED red. Entering the adjustment process turns OFF the error detection and turns ON TV. This enables the operation check to detect errors in the lamp or lamp circuit.
Check whether “L ERROR RESET” on point 7, page 10/11 of the adjustment process is 1 or more. If it is 1 or more, it indicates the lamp error detection was executed. After confirming that the lamp or lamp circuit is normal, reset the lamp error counter pushing “OK” in the R/C. After resetting counter the label “***OK***” appears on Screen.

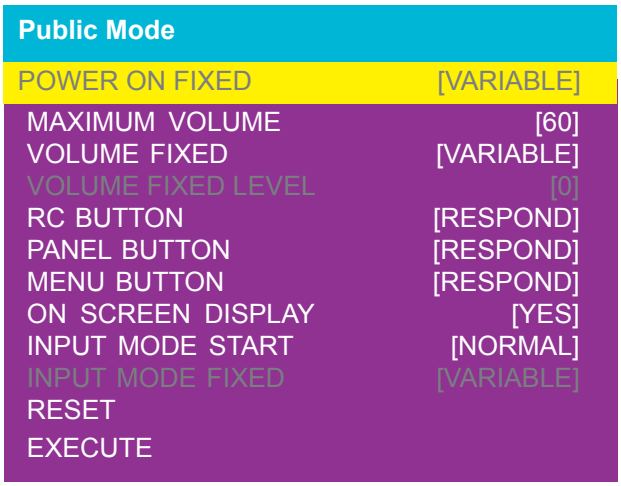
9.3. Reset standby cause error list

After confirming that the lamp error counter has been erased, select “STAND BY CAUSE RESET” on point 3, page 10/11 of the adjustment process and select ON using the right cursor. For execute press “OK” in the R/C and the label “***OK***” appears on Screen.

10. Public Mode (Hotel Mode)

10.1 How to Enter in the Public Mode (Hotel Mode).

Turn on the power and enter in the Adjustment Process mode (ADJ1 or Service Mode) as usual.
In the [INIT], Page 2/11 of Service, turns ON the Public Mode option.
Turn off TV by pressing Main Power switch.
While pressing “VOL+”and “P^” keys at the same time, press Main Power switch for more than 2 seconds.
After this sequence the TV will turn on showing the Public Mode setting screen as follows:



Is possible to select each item of function by pressing cursor UP/DOWN keys on the remote control or CH(∧)(∨) keys on the LCD TV.
The setting position of each item of functions is made by pressing cursor RIGHT/LEFT keys on the remote control or VOL(+)(-) keys on the LCD TV.
Select ENTER position after you set all function, and press cursor RIGHT/LEFT keys on the remote control or VOL(+)/(-) keys on the LCD TC for confirmation.

10.2. Public Mode Settings.

1. POWER ON FIXED [VARIABLE ⇔FIXED]
When it is set to “FIXED” the TV is impossible to be switch off by Main Switch or Remote Control.
2. MAXIMUM VOLUME [0 ⇔ 60]
Is possible to set the maximum volume at limited level.
3. VOLUME FIXED [VARIABLE ⇔ FIXED]
Is possible to fix the sound volume at limited level.
When “FIXED” is selected the sound volume before limited is fixed.
4.VOLUME FIXED LEVEL [0 ⇔ 60]
If “FIXED” has been selected, is possible to set a fixed volume at the level that is choosen.
5. RC BUTTON [RESPOND ⇔ NO RESPOND]
If “NO RESPOND” is selected, the remote control keys are inoperative.
6. PANEL BUTTON [RESPOND ⇔ NO RESPOND]
If “NO RESPOND” has been selected, the set´s keys remain deactivated (Except POWER key).
7. MENU BUTTON [RESPOND ⇔ NO RESPOND]
If “NO RESPOND” has been selected, “MENU” keys on the remote control, is inoperative.
8. ON SCREEN DISPLAY [YES ⇔ NO]
If “NO” has been selected, the On Screen Display does not appear.
9. INPUT MODE START [NORMAL⇨TV (X)⇨DTV⇨INPUT1⇨INPUT2⇨INPUT3⇨INPUT4 ⇨INPUT5⇨INPUT6⮌]
When any other item than “NORMAL” has been selected, the sets will start in a selected input mode at the next power-on.
10. INPUT MODE FIXED [VARIABLE ⇔FIXED]
If “FIXED” has been selected, any channels and input modes other than those selected at the start mode cannot be picked up.
11. RESET
Cancel all Public Mode settings. (It returns to the factory settings)
12. EXECUTE
After select this item, all positions that has been selected will be set.

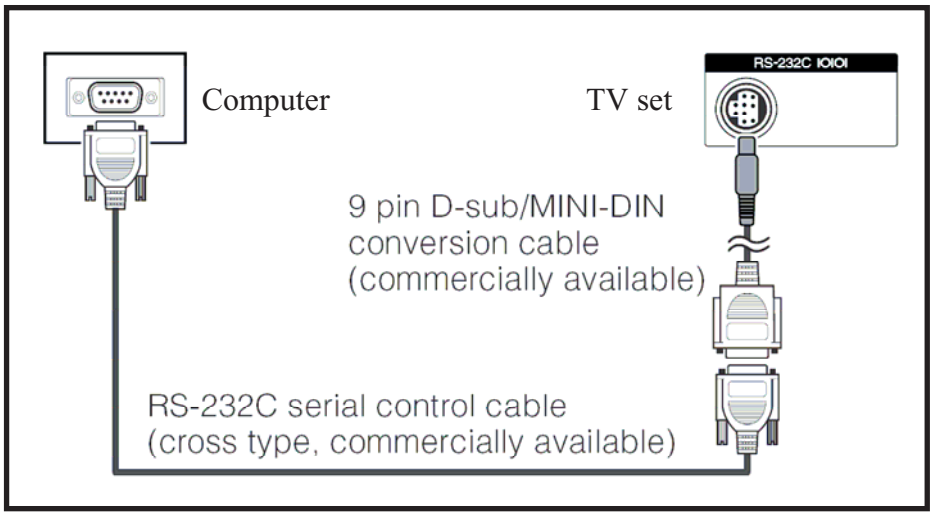
SOFTWARE UPDATING

There are 3 methods to update software in the VCTp: I2C method, RS-232C HyperTerminal and RS-232C Tera Term method.

- RS-232C method is allowed when the TV is working properly and the action should be only software upgrade.
- I2C method is required when the VCTp flash is empty or corrupted (it means, any software inside IC running).

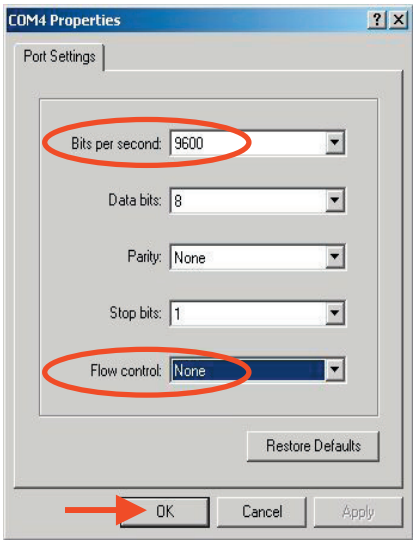
1. RS-232C Method Description (HyperTerminal).

The hardware tools requirement are:
1. A Modem-null (Cross type) DB9 female to DB9 female cable.
2. An adaptor DB9 male to mini-Din 9 pin male cable (Sharp Code: QCNWGA015WJPZ)
3. Make the connections as indicated in the figure:



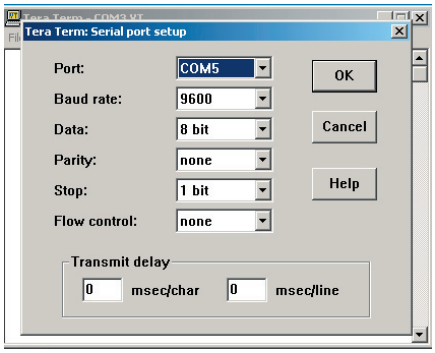
Before using RS-232C updating method is necessary to configure a Terminal PC software. HyperTerminal has been selected as a Terminal software because it's include in all Windows versions as an accessory, and you can find it inside "Accessories\Communications" folder. For this reason, please follow carefully the next steps:

1. First time HyperTerminal is used, it's necessary to configure some settings. Follows next action to configure two connection: low speed (9600bps) and high speed (115200bps).
2. Create a New Connection file with name "P55_9600bps".
3. Select a free COM port and select the Port Settings properties as follows:

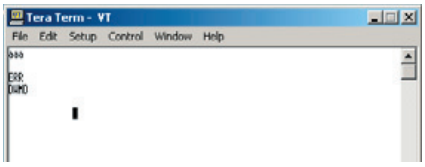


(*) If it has been created this file for P55E Series, it may be used for GD9E. If not it may be created a "GD9E_9600bps."

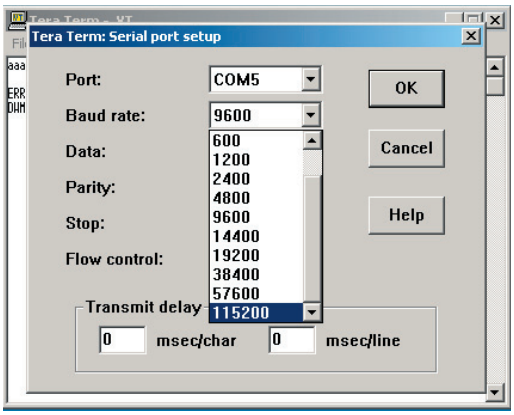
VCTp Software Updating, Tera Term (continued)



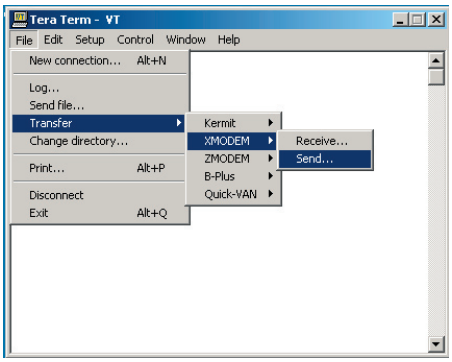
5. Select follows settings:
   Serial port to use: COM x
   Baud rate: 9600
   Data: 8 bits
   Parity: none
   Stop: 1 bit
   Flow control: none
   Enter O.K.



6. Check the connection between TV set and PC, sending a wrong command, as for example: “aaa”. TV set returns an “err” label as an syntaxes ERROR (Not correct order or sequence).
Send a “DWMD” (capital letters) command to enter TV set in Download Mode.
Change a baud rate to 115200.
Select: **Setup** ⇒ **Baud rate** ⇒ **115200** ⇒ **O.K.**

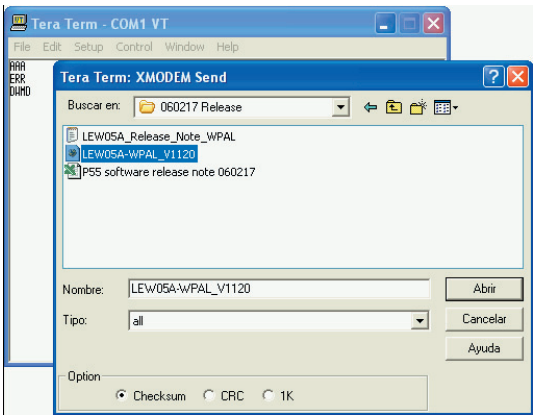


7. Select: **File** ⇒ **Transfer** ⇒ **XMODEM** ⇒ **Sent**

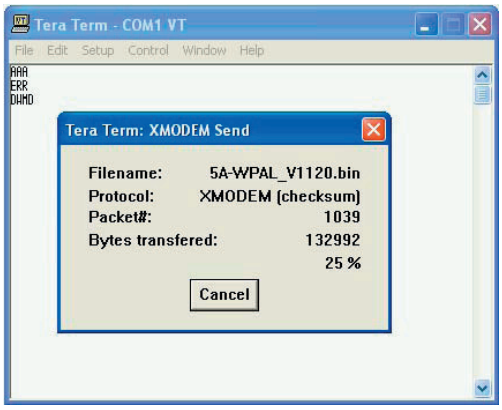


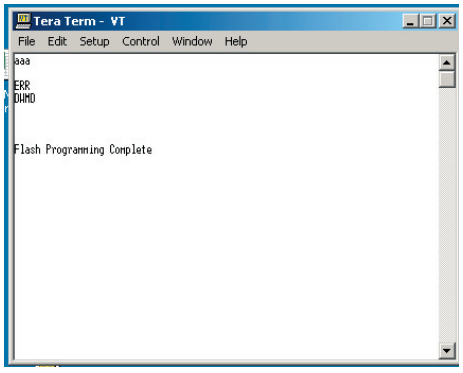
VCTp Software Updating, Tera Term (continued)

8. Choose the file for upgrade and click “Open”.



9. After select “Open” the upgrade process starts as follows:

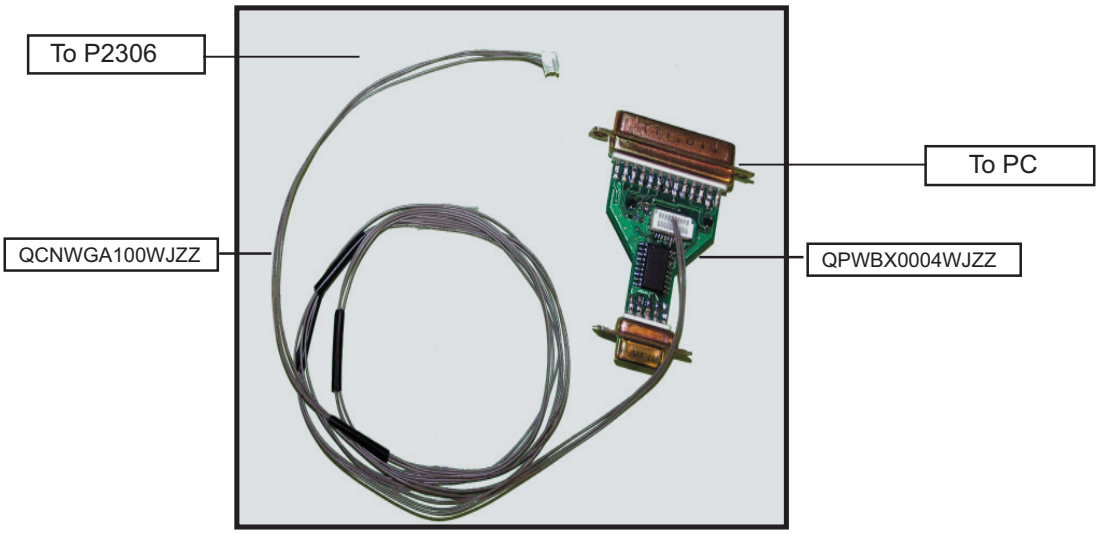




VERY IMPORTANT NOTE:
During the updating time, please don’t use the PC for other purposes, in order to abolish communication problems between TV set and PC. If TV set was not updated properly, the TV won’t have the software to startup again, and you must follow the “I2C method” to update another time the TV set.

1.3. I2C Method Description

The hardware tools requirement are:
1. A Parallel port I2C interface with 20 pin to 3 pin cable (Sharp Code: CKIT-0004WJV0).
2 . Make the connections as indicated below:
   a. Connect Parallel port I2C interface to LPT port of the computer.
   b. Connect the 20 to 3 pin cable from the I2C interface to the P2306 socket in the main board (XD603).

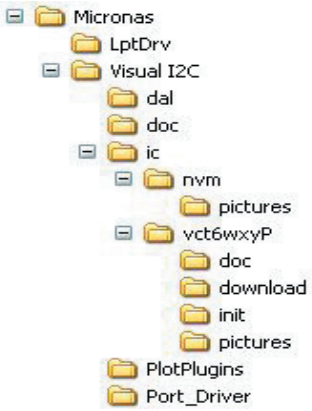


I2C Interface (CKIT-0004WJV0)

Before using I2C method is necessary to install Visual I2C software following next procedure.

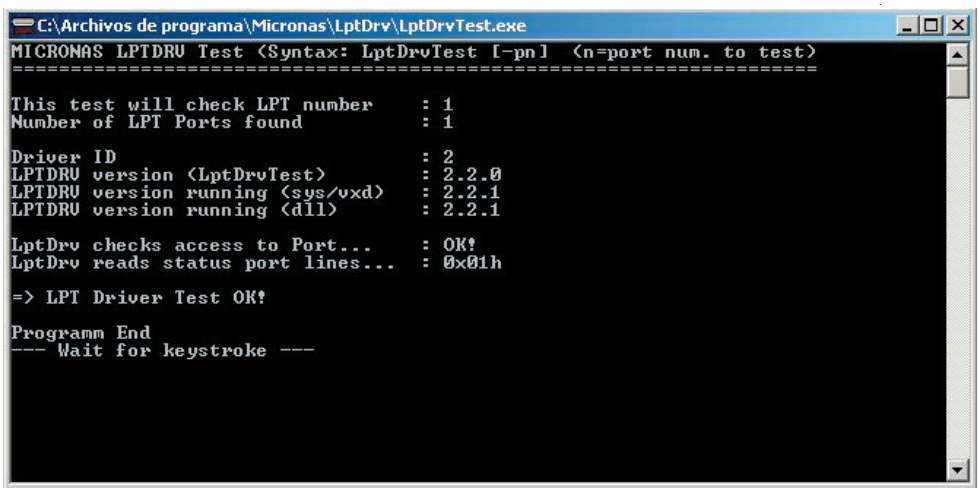
1. Install Visual I2C release V3.2.3b from file (“Setup_Visual_I2C_v3-2-3b8h.exe”).
•It’s strongly recommended to accept the suggested default folder (“C:\Program Files\Micronas\Visual I2C”).
2. Install Visual I2C VCTp extension from file (“Setup_VI2C_for_VCT6wxyP_v0111.exe”).
•It’s interesting to change default folder to same as Visual I2C (“C:\Program Files\Micronas\Visual I2C”).
•During this installation process is possible to install also a complementary software to manage NVM memories . This installation is not needed, for this reason uncheck the option when the setup program ask to you. In case of installation it’s interesting to change default folder to same as Visual I2C (“C:\Program Files\Micronas\Visual I2C”).
3. Install Parallel driver depending of your Windows version from existing files inside the Visual I2C installation folder “C:\Program Files\Micronas\Visual I2C\Port_Driver”, following next criteria:.
   a. Windows 98/Me (“Setup_LptDrv_v0104_9x.exe”).
   b. Windows NT (“Setup_LptDrv_v0104_NT_2000.exe”).
   c. Windows Xp/2000 (“Setup_LptDrv_v020201_XP_2000.exe”).

After installing Visual I2C, the new generated file structure should look like this:



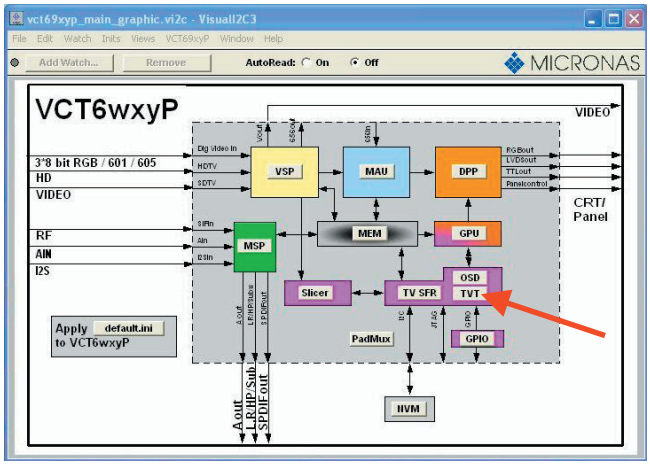
VCTp Software Updating, I2C (continued)

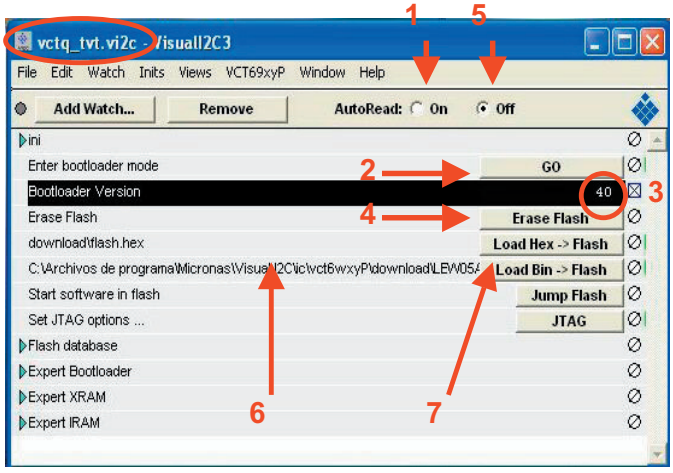
4. Check installation LPT driver using “C:\Program Files\Micronas\LptDrv\LptDrvTest.exe”. After run this software, if LPT driver is installed properly must appear this screen:



•If the result is not OK, check inside PC bios: Parallel Port Mode=EPP

To run VCTp software update program, please click over “VCTP” icon from “START\All programs\Micronas\Visual I2C\IC\VCTP” and after Visual I2C finish their starting process click on “TVT” module. As additional method, it’s possible to create a direct access to “C:\Program Files\Micronas\Visual I2C\ic\vct6wxyP\vctq_tvt.vi2c” and launch it from Windows Desktop.

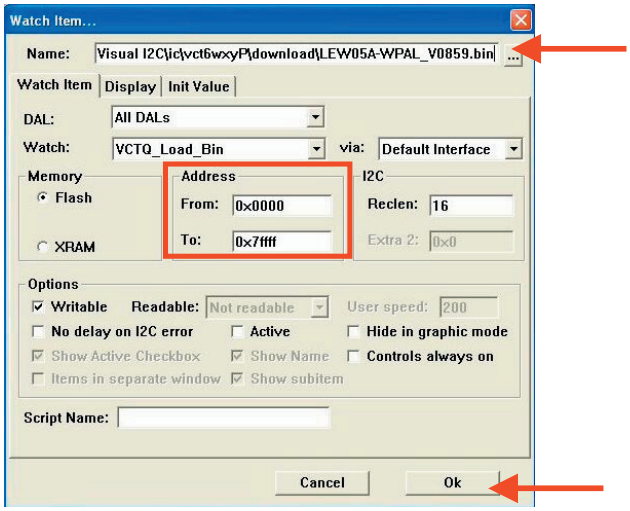




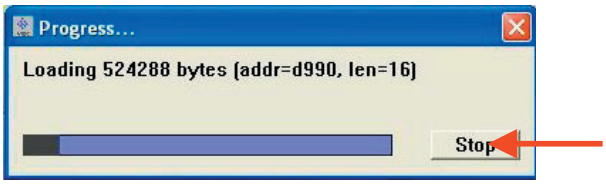
To start updating process follow next instructions:

1. Set Autoread in ON option.
2. Click on “GO” button.
3. Wait until “40” appears in Bootloader Version field.
4. Close DOS pop up windows pressing any key (“Press any key to continue…”.).
5. Click on the “Erase flash” button and wait for a seconds and set the AutoRead to OFF.
6. Check in the desired software version is selected in the “Load BinàFlash” option. If it’s not the correct one, please double click on the file name and select it. The first time this software is use it’s necessary to confirm write Addressing margin as from 0x0 to 0x7ffff.

VCTp Software Updating, I2C (continued)



7. Click on the “Load Bin → Flash” to start updating process.

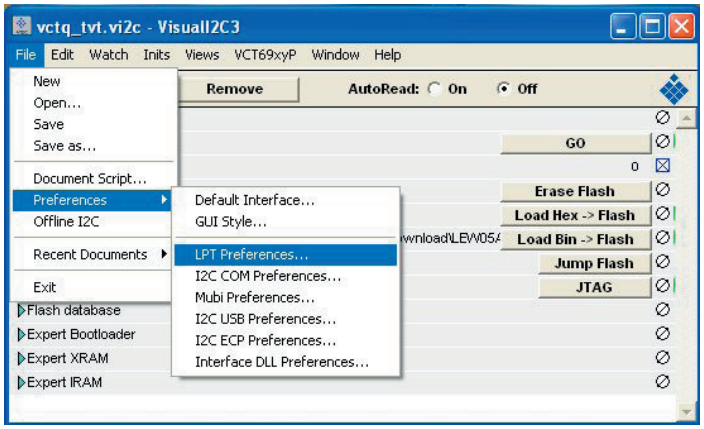


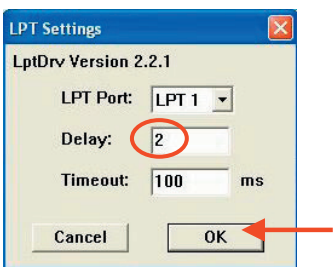
8. When the updating process finishes, the “Progress” pop up window automatically closes. If appears some problem during the updating process a error label appears in the filename information line.

If the TV has problem to enters in the “Bootloader mode”, it’s possible to force it by hardware method. This alternative method is described below:

1.Switch off TV set or hold VCTp RESET line to GND.
2.Pull down SCL line (pin 1) to GND (pin 3) in P2306 connector.
3.Switch on TV set or release VCTp RESET line.
4.Release SCL pull down after minimum of 2 seconds.
5.Check if VCTp is in bootloader mode with Autoread setting in ON.
6.Wait until “40” appears in Bootloader Version field.
7.Follow instruction from item 5 on software method.

Sometimes, depending on the PC hardware, the progress bar runs very fast (Normal time: 1 minute) or some error message appears in the filename information line. This means it’s necessary to modify some parameter of LPT port, for this reason select “LPT Preferences” on the “File\Preferences…” menu and increase Delay from “0” to “1” or “2” (normally, these values are the best choice).





2. How to update the Digital Board Software.

There are 2 methods to update the Digital Board Software on Flash Memory (IC4203) throught the Digital Processor (IC4001).

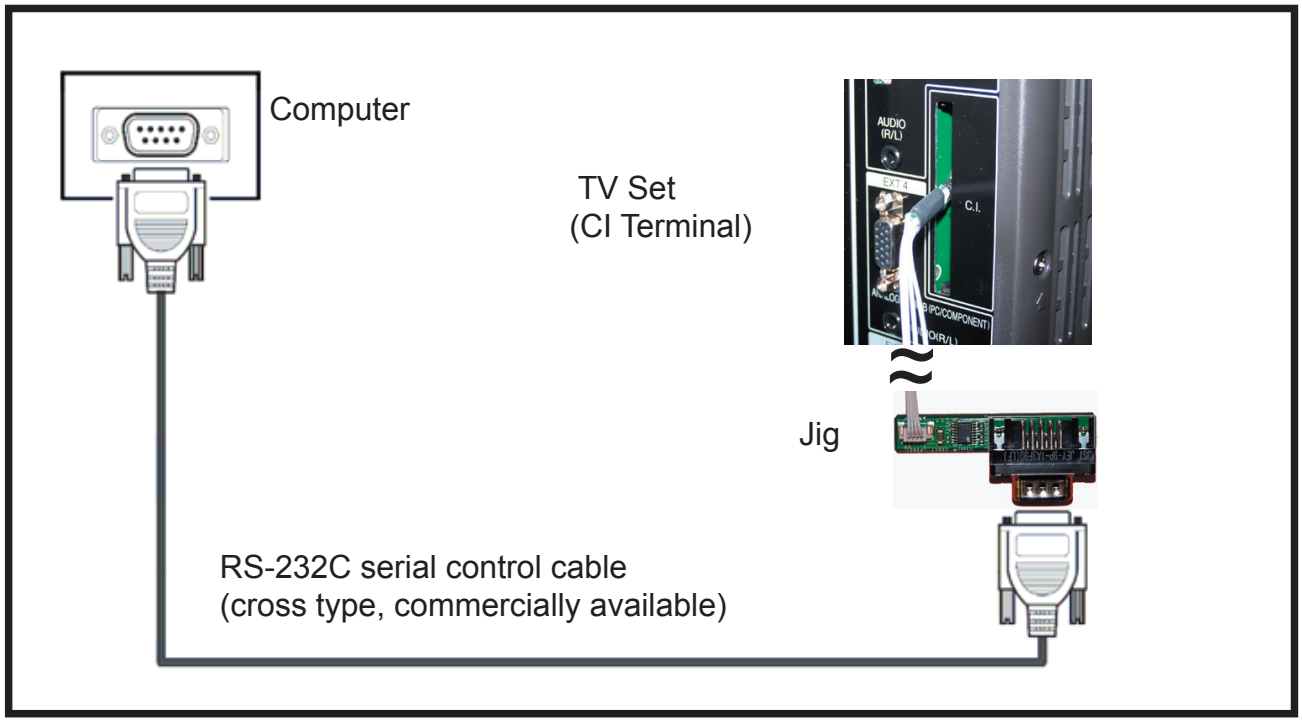
- Jig RS-232 Method (From PC trough RS-232C COM port).
- PCMCIA CARD (Compact Flash Memory) Method.

Note: *The PCMCIA method is only compatible with those PCs running XP Windows Version.*

2.1. Jig RS-232 Method Description

• **Hardware requirements:**

1. A modem null (Cross type) DB9 female to DB9 female cable.
2. The Jig Kit (Sharp Code: QCNWKA012WJZZ)
3. Make the connections as in the below figure.

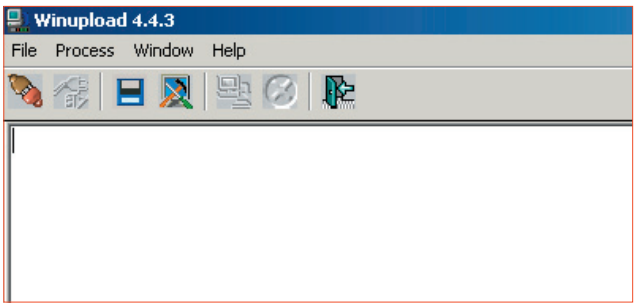


• **Software requirements:**

1. “Winupload” application software on PC.

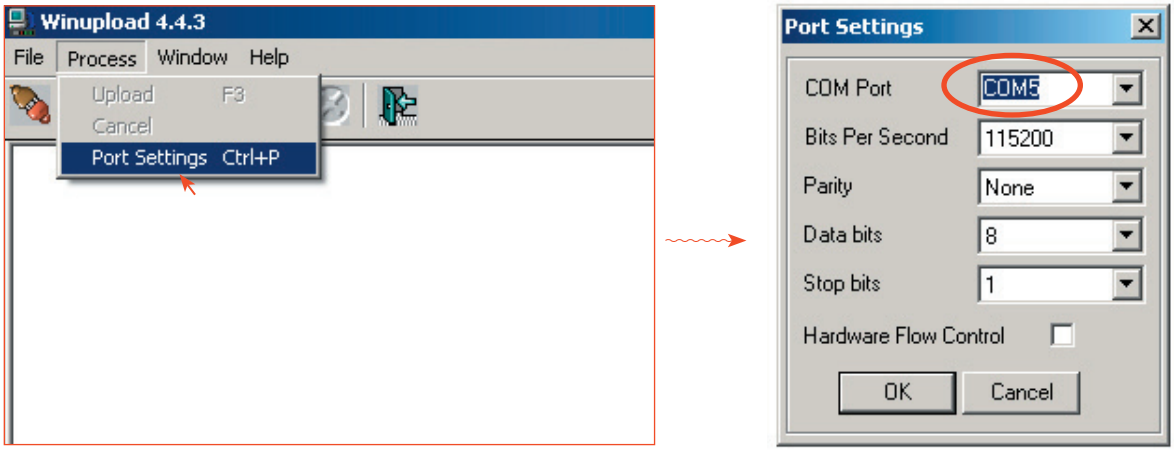
• **How to setup the “Winupload” software for the first time:**

1. Start “Winupload”. It will appear the following picture.



Digital Board Software Updating , Jig RS-232 (continued)

2. Select the most suitable RS232 Serial Port from “Port Setting” - “Process” Menu.

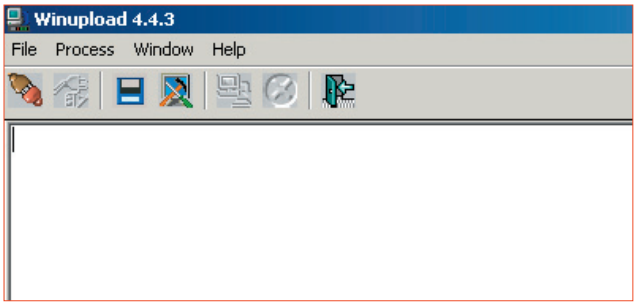


3. Select the following settings from “Port Settings” Menu.
   Bits Per Second: 115200
   Parity: None
   Data bits: 8
   Stop bits: 1
   Hardware Flow Control: OFF

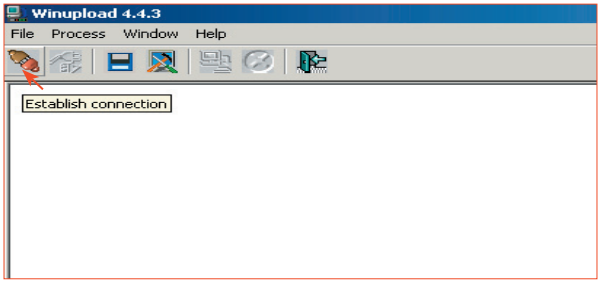
• **Procedure for updating the TV set.**

1. Switch off the TV set to be updated, in DTV mode.

2. Start “Winupload”. It will appear the following picture on PC.

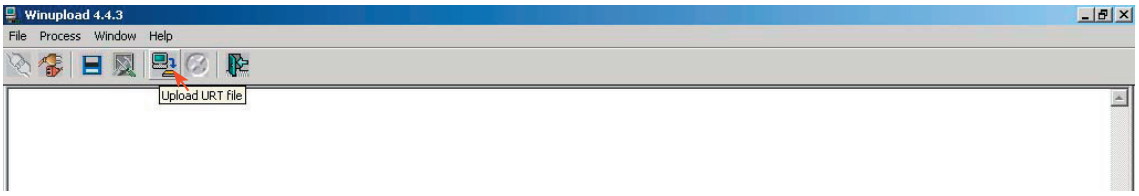


3. Establish connection on Winupload Software.

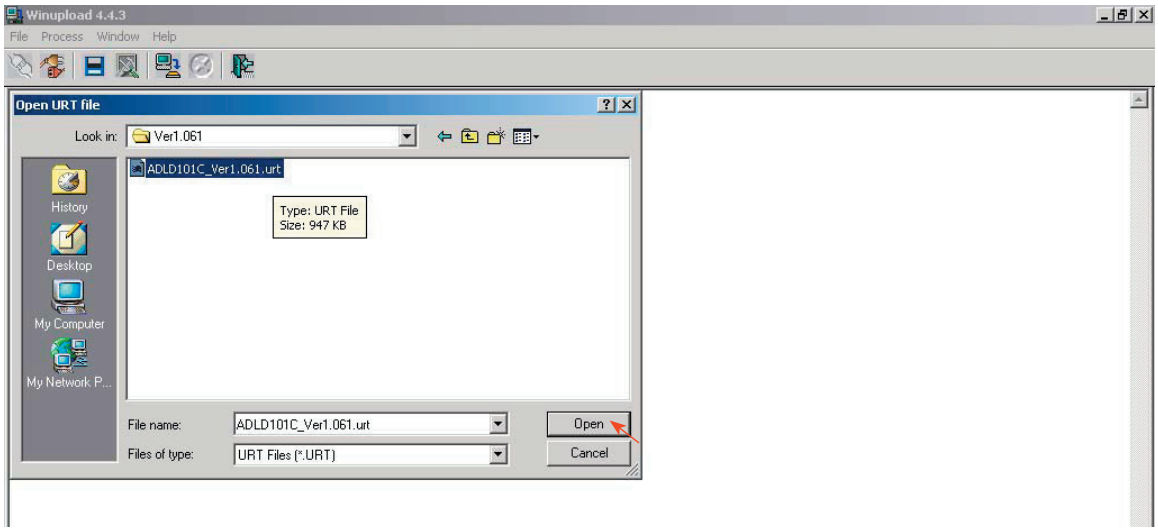


Digital Board Software Updating , Jig RS-232 (continued)

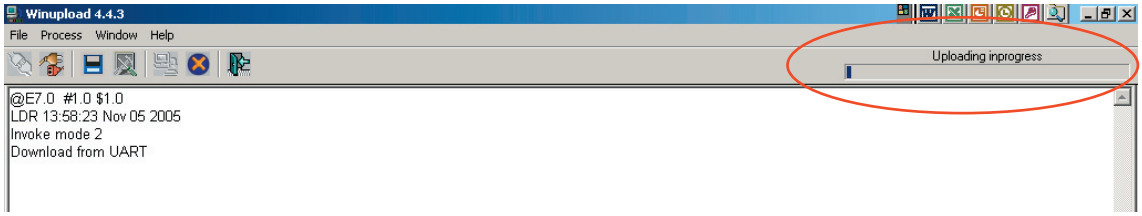
4. Select “Upload URT file”



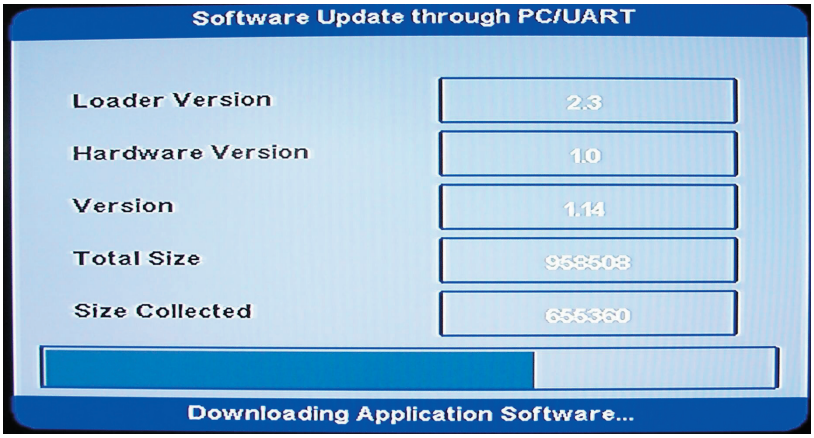
5. Select and open the “.urt” data file from data directory
   Note: *Consider the version shown below just an example, may be is not the latest one, and could be different depending on the TV set destination (market/Country) or model.*



6. Switch On the TV Set (previously in DTV Mode). The Uploading Process starts automatically.



While the TV set is uploading the software, the following information is shown on the TV set screen.



Digital Board Software Updating , Jig RS-232 (continued)

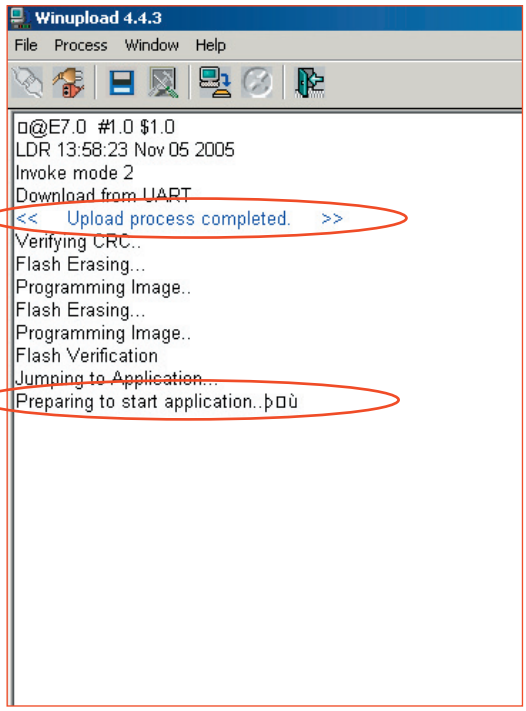
Then, data transfer from PC to TV set finishes when the “Upload progress completed” label appears in the “Winupload” screen. Now, the TV set made some additional verification (Items #2 to #7). When the full uploading process is finished, in the “Winupload” window appears the label “Preparing to start application” for a new TV Set, and just now, in the TV screen of the updated set, appears a congratulations label (Item #8).

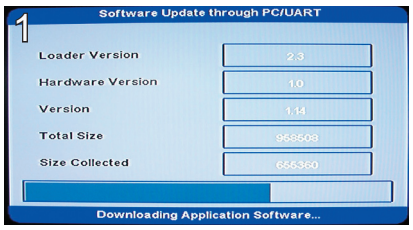
PC SCREEN PROGRESS

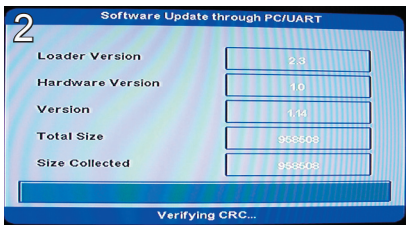
TV SCREEN PROGRESS

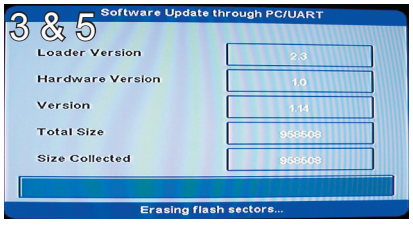
TV INDICATION

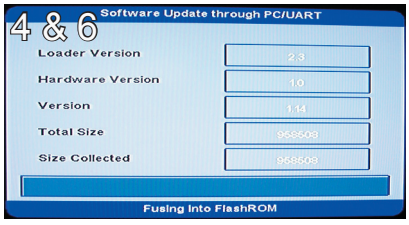
1
2
3
4
5
6
7
8

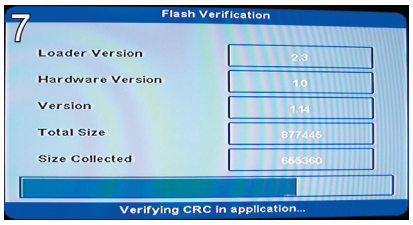












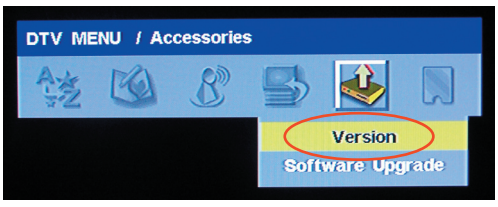
Note: *Do not turn off the TV set while the software updating was in progress.*

7. Unplug the AC cord.

8. Disconnect the Jig from TV Set.

• Software Version verification procedure.

1. Connect the AC cord and Switch On the TV Set.
2. Select DTV Menu on TV Set. The following On Screen Display will appear.



3. Select “Version”. The updated version can be verified.

Note: *Consider the version shown above just as example, may be is not the latest one, and could be different depending on the TV set destination (market/Country) or model.*

2.2. PCMCIA Card (Compact Flash) Method.

• **Hardware requirements:**

1. Compact Flash Memory Card.
2. PCMCIA Compact Flash Adapter or USB Multi Card Reader.

• **Software requirements:**

1. “StorageMediaManager1.0.1“ application software, installed on PC.
2. “Loader 2.2” or higher application software, installed on DTV Set.

Note: *Storage Media Manager only for Windows XP.*

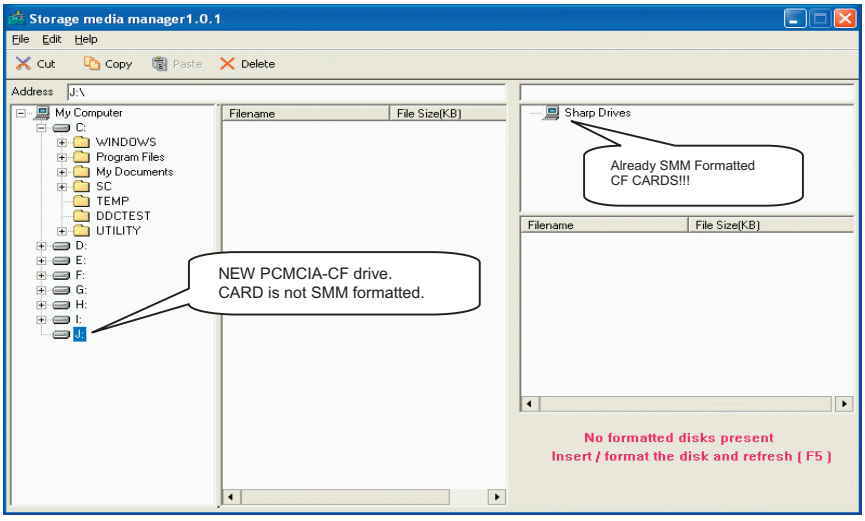
• **How to prepare the CF Card using the “Storage Media Manager 1.0.1” (SMM):**

1. Insert PCMCIA (Compact Flash(CF) + CF-Adapter)

2. Execute SMM. If SMM does not appear or a Windows Error Box appears, please verify there are no USB media drives connected to the PC.

Note: *Consider that it’s recommended remove unnecessary media during SMM execution. Probably, If you try to use an USB Multi Card Reader with SMM doesn’t work fine.*

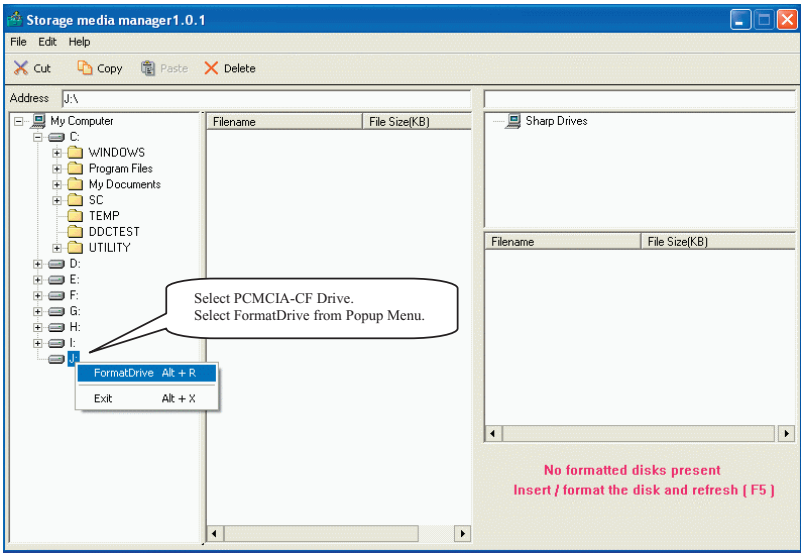
3. If the CF card has never been formatted for the SMM (is not same format type used in Windows), the SMM will show you the PCMCIA-CF drive as a Windows Media Drives, hanged of the “My Computer” tree (“J” Drive in the picture showed below).



But, if the PCMCIA-CF card had been formatted previously by SMM, directly the PCMCIA-CF drive will appear in the SMM formatted Drives box (**Sharp Drives**). Please go to Item #6.

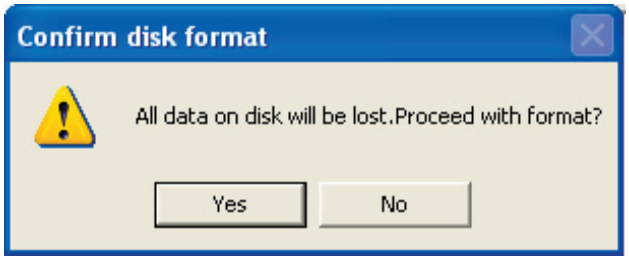
Digital Board Software Updating , PCMCIA (continued)

4. In case of not SMM formatted card, select PCMCIA-CD Drive and using the Right-Click Pop up Menu please format the Drive.

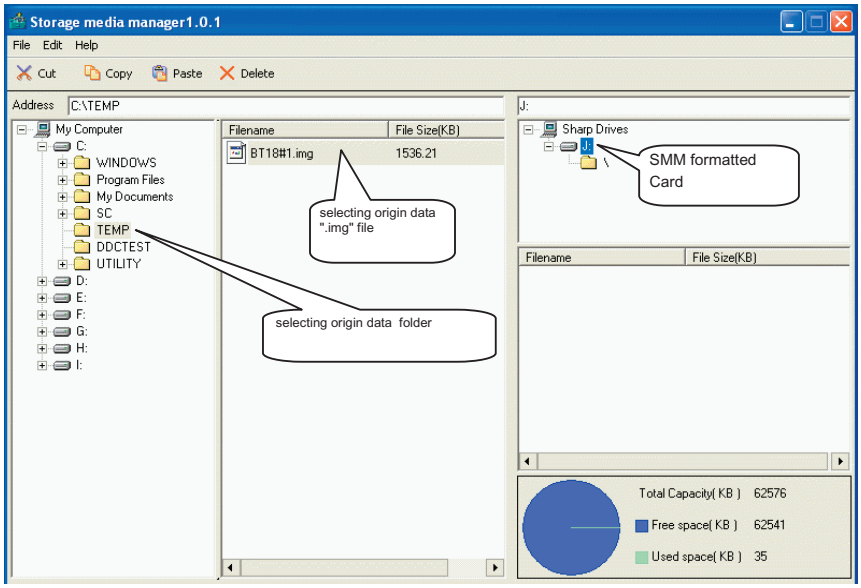


5. Formatting the CF card. Select “Yes” to confirm the action.

NOTICE: All FC’s data of the inside are erased.

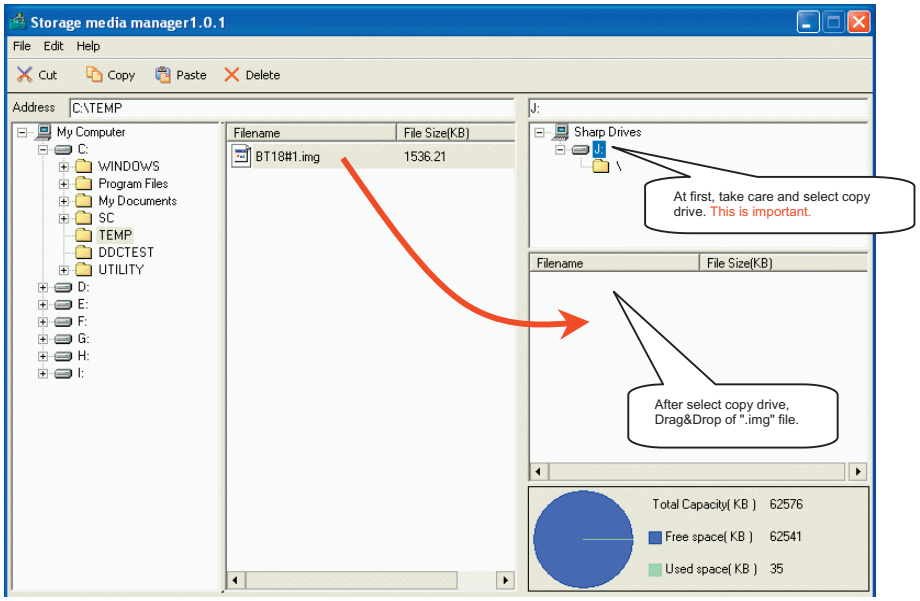


6. If SMM formatted card already appears under SHARP DRIVES box please continue, if not try to repeat from item #1. Select origin folder and “.img” data file to be written in the CF card.

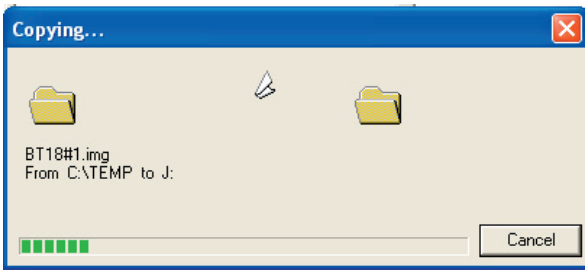


Digital Board Software Updating , PCMCIA (continued)

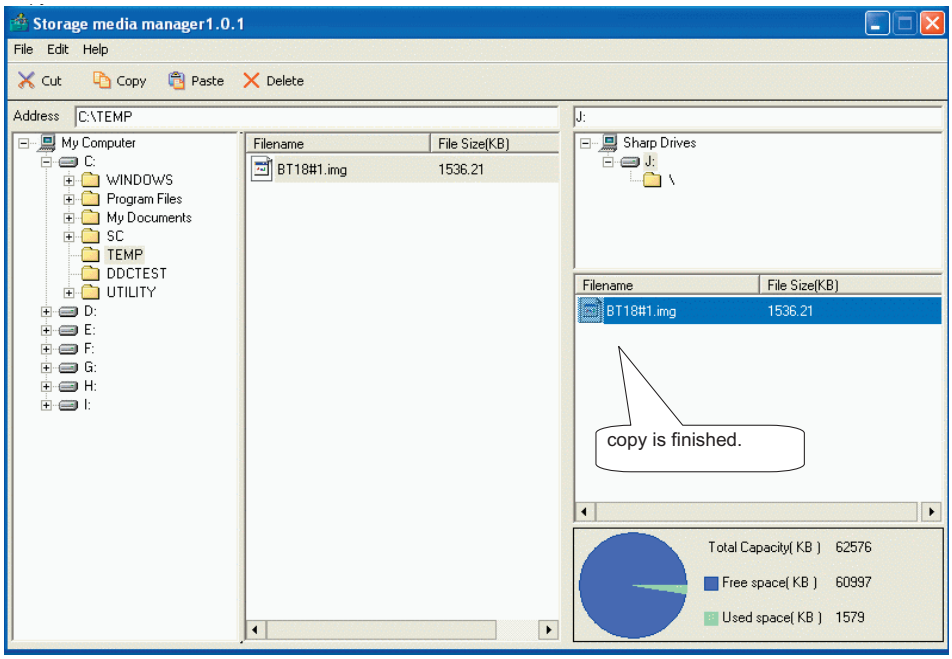
7. First of all, select copy target drive and then use Drag & drop for the ".img" file.



8. Wait, copy is in process.



9. Copy is finished, when the Copying progress bar disappears and the name of data file appears in the File Box.



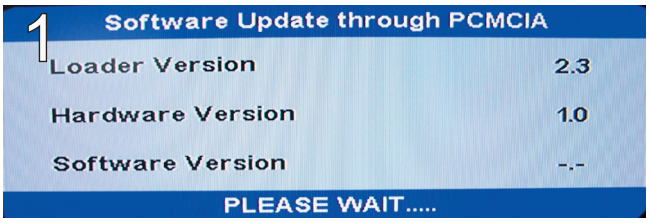
Digital Board Software Updating , PCMCIA (continued)

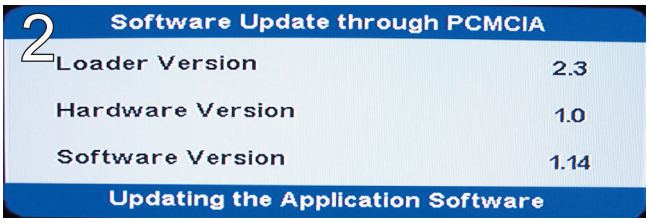
10. Close SMM application.
11. Remove PCMCIA safely using the Windows Task bar pop up menu (Right-click over the Tray Icon).

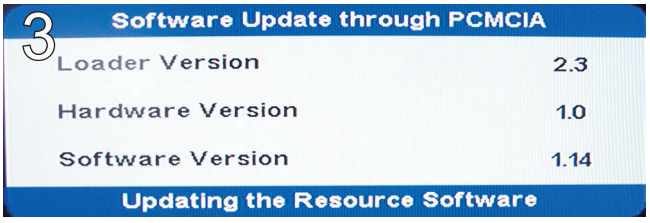
12. Now, the PCMCIA-CF card is prepared to update the TV set.

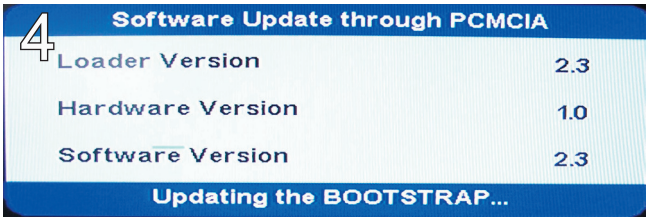
• **Procedure to update the TV Set using PCMCIA-CF Card:**

1. Switch Off the LCD TV Set.
2. Insert PCMCIA Card (already prepared according the details before given at "**How to prepare the CF Card using the "Storage Media Manager 1.0.1" (SMM))**".
3. Switch On the LCD TV Set (it starts automatically the updating, Items #1 to #4).

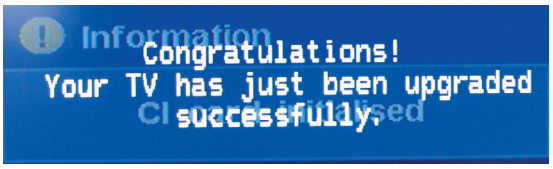








4. Wait till the finishing indication is shown.



5. For checking the correct update, please Select DTV Menu on TV Set. The following On Screen Display will appear.

6. Select "Version". The updated version can be verified.

Backlight failure to light up

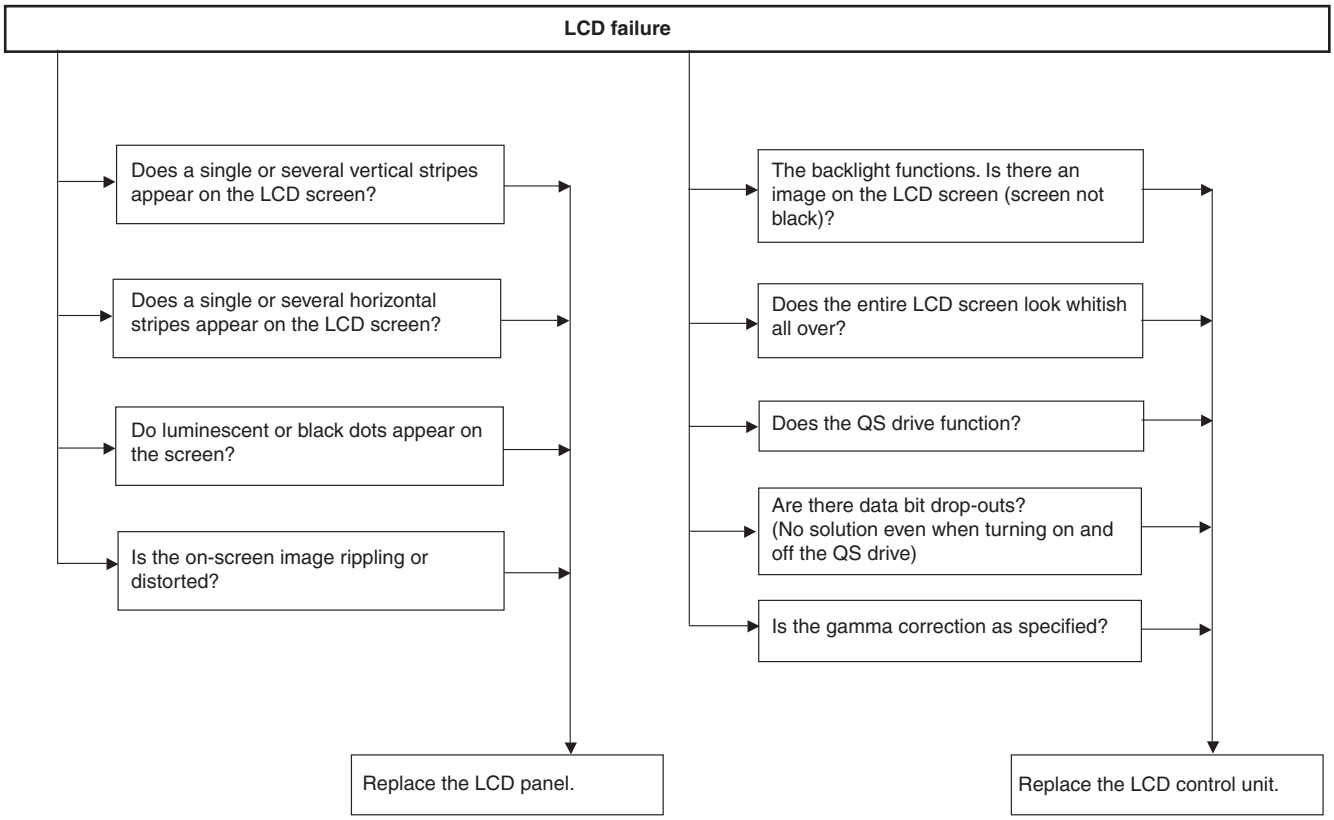
- Do all the fluorescent tubes light up?
  - *NO* → Check the individual fluorescent tubes for light-up failure.
    - *YES* → Replace any defective fluorescent tube (s) with new one (s).
  - *YES* ↓
- Is the power supplied to CN7501 on the inverter unit?
  - *NO* → Check the connection between power unit and inverter unit.
  - *YES* ↓
- Is the F7501 fuse in the inverter unit circuit functioning?
  - *NO* → Replace the blown-out F7501 fuse on the inverter unit. Turn on the power again. If the fuse gets blown out again, check the short-circuited spot.
    - *YES* → Check T7501 and T7502 and their peripheral circuits as well as IC7501 and Z7601 and their peripheral circuits.
  - *YES* ↓
- Is the VCC power supplied to the inverter control IC (IC7501) on the inverter unit?
  - *NO* → Check the circuit connected with the VCC terminal on the inverter control IC (IC7501).
  - *YES* ↓
- Are there control signals (INV-OFL, INV-OSC, INV-ON/OFF, INV-BRT) at CN7501 and CN7502 on the inverter unit?
  - *NO* → Are there the INV-ON/OFF and INV-BRT signals at P704 on the power unit, and the INV-OFL and INV-OSC signals at P1701 on the main PWB?
    - *NO* → Check pins (18), (27) and (28) of IC1710 (main PWB) and pin (16) of IC3003.
  - *YES* ↓
- Is the specified control signal inputted at IC7501 (INV-CTL) on the inverter unit?
  - *NO* → Check the line between CN7502 and IC7501.
  - *YES* ↓
- Are the Q7501 and Q7502 transistors at the primary side of T7501 functioning?
  - *NO* → Replace IC7501 (INV-CTL) or check its peripheral circuits.
  - *YES* ↓
- Is the secondary circuit of T7501 functioning?
  - *NO* → Replace T7501 or the T75** transformer for the fluorescent tubes, or check their peripheral circuits.

FRC circuit failure

Note: The SD signal (576i and 480i) alone passes through the FRC circuit. (The HD signal does not go through.)

- Does the image appear with the HD signal, but not with the SD signal?
  - *YES* → Is the power supplied to IC3301 (FRC)? Is there the FRC-IN signal input at pins (142) and (13) of IC3301? Check the soldering condition.
    - *YES* → Replace IC3301 (FRC).
- Does anything unusual (whitish or blackish screen, block noise, for example) appear on the screen?
  - *YES* → Is there the specified RESET signal input at pin (39) of IC3301 (FRC)? (60 ms delay design)
    - *YES* → Check IC3302 (RESET).
- Does the image look unusual with the power switch turned on?
  - *YES* → Check the connection between pin (208) of IC3002 (VCTP) and pin (13) of IC3301 (FRC) as well as that between pin (4) of IC3302 and pin (6) of IC3301.

Troubleshooting Table (continued)



MAJOR ICs INFORMATION

1. General ICs Information

XD890WJ (MAIN UNIT):

· **IC1905** : HDMI RECEIVER
Part number: Sii9021
Sharp code: VHISII9021+-1Q
The Sii9021 is a second generation panel link cinema receiver that is compatible with the HDMI 1.1 (High Definition Multimedia Interface) specification. The Sii9021 is capable of receiving and outputting two channel digital audio signals at up to 192 kHz— an excellent solution for digital TVs.
This IC features the following.
1) Digital video interface supports video processors.
2) Analog RGB and YPbPr output: 10-bit DAC.
3) Digital audio interface supports high-end audio systems.

· **IC1901 & IC1902**: NVM OF HDMI (E-EDID)
Part number: 24LC2BIN
Sharp code: VHI24LC2BIN-1Y
This IC is a 2-wire (I2C bus type) serial EEPROM this is electrically programmable. This EEPROM chip stores the data structure used to carry configuration information for optimal use of a display (EDID data).

· **IC2701** : SYNC SELECT
Part number: TVHC153T
Sharp code: VHITVHC153T-1Y
This VHC153 is a high-speed Dual 4-input multiplexer with common select inputs and individual enable inputs for each section.

· **IC2704** : HDMI & RGB SOUND MULTIPLEXER
Part number: CD4052BP
Sharp code: VHICD4052BP-1Y
The TC74HC4052A is a high-speed CMOS analog multiplexer/demultiplexer backed by silicon gate CMOS technology. The multiplexer function includes the selection and mixing of analog and digital signals. The chip consists of 4 channels (x 2). A digital signal through the control terminal turns on the switch of a corresponding channel.

· **IC3002 :** VIDEO PROCESSOR
Part number: VCTP
Sharp code: RH-IXB698WJZZQ
The VCT 6wxyP family is dedicated to high-quality FPD and double-scan TV sets. The memory and program ROM are integrated in the IC. Modular design and deep submicron technology allow the integration of audio, video, teletext, OSD, and controller-related functionalities. They cover the whole range of flat-panel display TVs. The IC is based on proven functional blocks of existing products like VCT 49xxI, VSP 94x5B, and DPS 94xxB.
Each member of the IC family contains the entire audio, video, upconversion processing for 4:3 and 16:9 50/60 Hz progressive or 100/120 Hz interlaced stereo TV sets plus the control/data interface for flat-panel displays. The integrated microcontroller is supported by a powerful OSD and graphics generator with integrated teletext acquisition.
The VCT 6wxyP family provides a front-end video processing unit with 4 CVBS-Y/C or component inputs for HDTV, EDTV, and SDTV. A VBI slicer, support of 1000 pages of teletext, and a 3-D comb filter for PAL and NTSC (in certain versions) are also available. The front-end unit further allows to process an SD and an HD source in parallel, thus enabling PiP and PaP functionality. Motion-adaptive de-interlacing, temporal noise reduction, and film mode detection are based on a unified memory technology.
Post-scaling in the display processing block ensures the desired output format. Display processing is supported by an 8-bit 8051-compatible controller. By means of powerful alpha-blending, the graphics mixer composes the output image from following image layers: the video layer, the OSD layer and the pixel graphics layer.
The audio part consists of a multistandard sound IF demodulator and a baseband processor supporting all desired sound features in this range.
A connection for additional features, such as advanced motion compensation via -Micronas' FRC 94xyA, is also provided.

· **IC2702 & IC2705:** VIDEO INPUT SELECTOR.
Part number: MM1507XN
Sharp code: VHIMM1507XN-1Y
This IC extends the series of ICs for video/audio signal switching, with a 2-input 1-output single video switch with 75Ω driver and input clamp.

· **IC3001 :** NVM 64Kb-E2PROM
Part number: BR24L64F
Sharp code: VHIBR24L64F-1Y
The BR24L64F is a 2-wire (I2C bus type) serial EEPROM that is electrically programmable. This IC stores the control data of system contents (last memory, for example) for the main microprocessor's AV PWB and main PWB. The data is given out by commands from the main microprocessor.

· **IC3003 :** PIC MICROCONTROLLER
Part number: PIC16F913
Sharp code: RH-IXB664WJZZY
28 Pin Flash-Based, 8 bit CMOS Microcontrollers with LCD Driver and nanoWatt Technology.
This IC is controlled via I2C and works how expander of ports. This IC has led control and include A/D converter.

· **IC3005**: RESET IC FOR VCTP (IC3002)
Part number: BU4215G
Sharp code: VHIBU4215G+-1Y
Low voltage detector IC with adjustable output delay. Standard detection voltage = 1.5V

· **IC3301:** HIGH-END FRAME-RATE CONVERTER
Part number: FRC 942xA
Sharp code: RH-IXB064WJN1Q
The FRC 942xA is a single-chip frame rate converter with vector-based motion compensation, video scaling, and high-performance picture improvement features. It integrates all functions – including all video frame buffers – in one monolithic IC.

· **IC3302**: RESET IC FOR FRC (IC3301).
Part number: BU4215G
Sharp code: VHIBU4215G+-1Y
Low voltage detector IC with adjustable output delay. Standard detection voltage = 1.5V

· **IC2301 :** RS-232 TRANSMITTERS/RECEIVERS
Part number: ISL83220
Sharp code: VHIISL83220-1Y
The ISL83220E is a 3.0V to 5.5V powered RS-232 transmitter/receiver,+/-15kV ESD protected, minimum data rate 250 kpbs.

· **IC2303 :** NVM OF PC MODE (EDID)
Part number: BR24C21F
Sharp code: VHIBR24C21F-1Y
This IC is a 2-wire (I2C bus type) serial EEPROM this is electrically programmable. This EEPROM chip stores the data structure used to carry configuration information for optimal use of a display (EDID data).

· **IC1701:** POWER RESET OF +BU1.8V
Part number: BU4239G
Sharp code: VHIBU4239G+-1Y
Low voltage detector IC with adjustable output delay. Standard Detection Voltage = 3.9V

· **IC1702:** BU+3.3V (VOLTAGE INPUT: BU+5V)
Part number: PQ20WZ11
Sharp code: VHIPQ20WZ11-1Y
Low power-loss voltage regulators. Variable Output. Output current 1A. Built-in overcurrent, overheat protection functions, ASO protection circuit.

· **IC1703:** S+8V (VOLTAGE INPUT: POW+12V)
Part number: PQ20WZ11
Sharp code: VHIPQ20WZ11-1Y
Low power-loss voltage regulators. Variable Output. Output current 1A. Built-in overcurrent, overheat protection functions, ASO protection circuit.

· **IC1707:** +3.3V (VOLTAGE INPUT: POW+5V)
Part number: PQ20WZ11
Sharp code: VHIPQ20WZ11-1Y
Low power-loss voltage regulators. Variable Output. Output current 1A. Built-in overcurrent, overheat protection functions, ASO protection circuit.

· **IC1708:** +1.8V (VOLTAGE INPUT: POW+5V)
Part number: MP1410
Sharp code: VHIMP1410ES-1Y
DC to DC Converter. 2A Step down switch mode regulator with a built in internal Power Mosfet. Fault condition protection includes cycle-by-cycle current limiting and thermal shutdown.

· **IC1706:** BU+1.8V (VOLTAGE INPUT: BU+5V)
Part number: MP1410
Sharp code: VHIMP1410ES-1Y
DC to DC Converter. 2A Step down switch mode regulator with a built in internal Power Mosfet. Fault condition protection includes cycle-by-cycle current limiting and thermal shutdown.

· **IC1710:** CPLD
Part number: EPM240T
Sharp code: RH-IXB823WJZZQ
This IC is a CPLD of Altera MAXII family and use 240 logic elements (LEs) (192 equivalent macrocells)
MAX II devices offer high I/O counts, fast performance. MAX II devices are designed to reduce cost and power while providing programmable solutions for applications such as bus bridging, I/O expansion, power-on reset (POR) and sequencing control, and device configuration control.
This device controls ON/OFF power supply, signals for inverter unit and etc.

FD604WJ (AV UNIT):

· **IC301 & IC302** : AUDIO AMPLIFIER
Part number: TDA8931T
Sharp code: VHITDA893T-1Y
The TDA8931 is a switching power stage for high efficiency class-D audio power amplifier systems. The IC has a high efficiency so that a heat sink is not required up to 20W (RMS).

· **IC303** : HEADPHONE AMPLIFIER
Part number: NJM4558M
Sharp code: VHINJM4558M-1Y
The NJM4558 is a dual high-gain operational amplifier internally compensated and constructed on a single silicon chip using an advanced epitaxial process.

IC1101 & IC1102: SCART VIDEO OUTPUT DRIVER.
Part number: MM1506XN
Sharp code: VHIMM1506XN-1Y
This IC extends the series of ICs for video/audio signal switching, with a 2-input 1-output single video switch with 75Ω driver and input bias (6dB gain).

IC1201: VIDEO INPUT SELECTOR.
Part number: MM1507XN
Sharp code: VHIMM1507XN-1Y
This IC extends the series of ICs for video/audio signal switching, with a 2-input 1-output single video switch with 75Ω driver and input clamp.

FD605WJ (POWER SUPPLY UNIT):

· **IC704:** POWER SUPPLY CONTROLLER FOR SIGNAL BOARD
Part number: MR4030
Sharp code: VHIMR4030++-1
A high speed 900V IGBT makes ideal partial resonance operation which ensures high efficiency and low noise.
Very low power consumption at micro-loads (burst mode).
Start-up circuit eliminates the need for start-up resistor.
Excess current protection (ON period limitation, primary current limitation), excess voltage protection, and thermal shut-down function are incorporated.

· **IC705:** POWER SUPPLY CONTROLLER FOR INVERTER
Part number: MR4020
Sharp code: VHIMR4020++-1
A high speed 900V IGBT makes ideal partial resonance operation which ensures high efficiency and low noise.
Very low power consumption at micro-loads (burst mode).
Start-up circuit eliminates the need for start-up resistor.
Excess current protection (ON period limitation, primary current limitation), excess voltage protection, and thermal shut-down function are incorporated.

· **IC706 & IC707:** FEEDBACK CONTROL
Part number: TA76431R
Sharp code: VHITA76431R-1Y
Adjustable precision shunt regulator for feedback control for driving an optocoupler in power supplies

IC708: LOW AC MAINS VOLTAGE DETECTOR.
Part number: NJM2904M
Sharp code: VHINJM2904M-1Y
The IC consists of two independent, high gain internally frequency compensated operation amplifiers which were designed specifically to operate from single power supply.

IC709: +24V/+5V VOLTAGE SUPERVISOR.
Part number: NJM2903M
Sharp code: VHINJM2903M-1Y
The IC consist of two independent precision voltage comparator, high gain internally frequency compensated operation amplifiers which were designed specifically to operate from single power supply.

FD607WJ (RC/LED UNIT):

· **IC101 :** OPC
Part number: TPS850
Sharp code: VHITPS850++-1Y
The TPS850 is a linear-output photo-IC which incorporates a photodiode and current amp circuit in a single chip. This photo-IC is current output type, so can set up output voltage freely by arbitrary load resistance.

FD609WJ (TUNER UNIT):

· **IC201 :** IF-Demodulator/PLL
Part number: TDA9886
Sharp code: VHITDA9886+-1Y
The TDA9886 is an alignment-free multi-standard (PAL, SECAM and NTSC) vision and sound IF signal PLL demodulator for positive and negative modulation including sound AM and FM processing.
This IC features are the following.
* Gain controlled wide-band vision intermediate frequency (VIF) amplifier (AC-coupled).
* Multi-standard true synchronous demodulation with active carrier regeneration (very linear demodulation, good intermodulation figures reduced harmonics, excellent pulse response).
* Gate phase detector for L/L accent standard.
* Fully integrated VIF Voltage Controlled Oscillator (VCO), alignment-free; frequencies switchable for all negative modulated standards via I2C bus.

* 4MHz reference frequency input [signal from phase-locked loop (PLL) tuning system] or operating as crystal oscillator.
* VIF Automatic Gain Control (AGC) detector for gain control operating as a peak sync detector for negative modulated signals and as a peak white detector for positive modulated signals.

IC 202: COFDM DECODER.
Part number: STV0360C
Sharp code: RH-IXB682WJZZQ
The STV0360C is a COFDM (codec orthogonal frequency division multiplex) demodulator that performs IF to MPEG-2 block processing of OFDM carriers. It is intended for digital terrestrial receivers for compressed video, sound and data services. It implements all the functions from the tuner IF output to the MPEG-2 transport stream input. The STV0360C integrates an A/D converter that delivers the required performance to handle up to 64 QAM carriers in a direct IF sampling architecture.

IC204: I2C BUS SELECTOR (TUNER CONTROLLED FROM VCTP OR COFDM DECODER).
Part number: SN74LV4053APWR
Sharp code: VHILV4053AT-1Y
The SN74LV4053APWR is a high-speed CMOS analog multiplexer/demultiplexer backed by silicon gate CMOS technology. The multiplexer function includes the selection and mixing of analog and digital signals. The chip include two independent 3 channels selectors. A digital signal through the control terminal turns on the switch of a corresponding channel.

KD628WJ (DIGITAL UNIT):

IC4001: DIGITAL PROCESSOR MPEG 1/2 DECODER (Audio/Video).
Part number: STI5516AUCL
Sharp code: RH-IXB680WJZZQ
The STi5516 is a device that integrates all of the back-end functions required for mainstream set-top boxes . These include:
*An enhanced ST20 32-bit RISC CPU with a 166MHz clock, 8Kbytes of instruction cache, 8Kbytes of data cache and 8Kbytes of embedded SRAM.
*A 16-bit, 133MHz Shared Memory Interface, with support for 64- and 128-bit configurations.
*A programmable External Memory Interface supporting six separately configurable banks of SRAM, Flash and DRAM.
*An MPEG-2 (MP@ML) decoder, including trick modes such as smooth fast-forward and rewind.
*A Graphics/Display unit with five display panes, alpha blending, antialiasing and antiflutter filters, subpicture decoder, and display compositor with separate OSD (On-Screen Display) controls for TV and VCR outputs.
PAL/NTSC/SECAM encoder.
*Audio subsystem with embedded DSP for all popular audio formats.
*A full range of on-chip peripherals, including five UARTs, six parallel I/O banks, two smart card interfaces, four PWM channels, teletext serializer, multi-channel IR transmitter/receiver, and a modem analog front-end interface.

IC 4203: 16 Mbit Flash Memory (Program Memory).
Part number: MBM29LV160BE70TN
Sharp code: RH-IXA964WJN1

IC 4201 & IC 4202: 64Mbit SDRAM (Temporary Data).
Part number: KAS641632H-UC75
Sharp code: RH-IXB076WJZZQ

IC4204: NVM 64Kb-E2PROM FOR DIGITAL PROCESSOR (IC4001).
Part number: BR24L64F
Sharp code: VHIBR24L64F-1Y
The BR24L64F is a 2-wire (I2C bus type) serial EEPROM that is electrically programmable. This IC stores all data related to the Digital Module (Channels, User settings, etc.).

IC4003: RESET ICs FOR DIGITAL PROCESSOR (IC4001).
Part number: BU4228G
Sharp code: VHIBU4228G+-1Y
Low voltage detector IC with adjustable output delay. Standard detection voltage = 2.8V.

IC4402 & IC4405: OCTAL TRANSPARENT D-TYPE LATCHES WITH 3-STATE OUTPUTS.
Part number: SN74LVC573APWR
Sharp code: VHILVC573AP-1Y
These devices feature 3-state outputs designed specifically for driving highly capacitive or relatively low-impedance loads. They are particularly suitable for implementing buffer registers, input/output (I/O) ports, bidirectional bus drivers, and working registers. In this design additionally are isolating digital processor (IC4001) from PCMCIA connector.

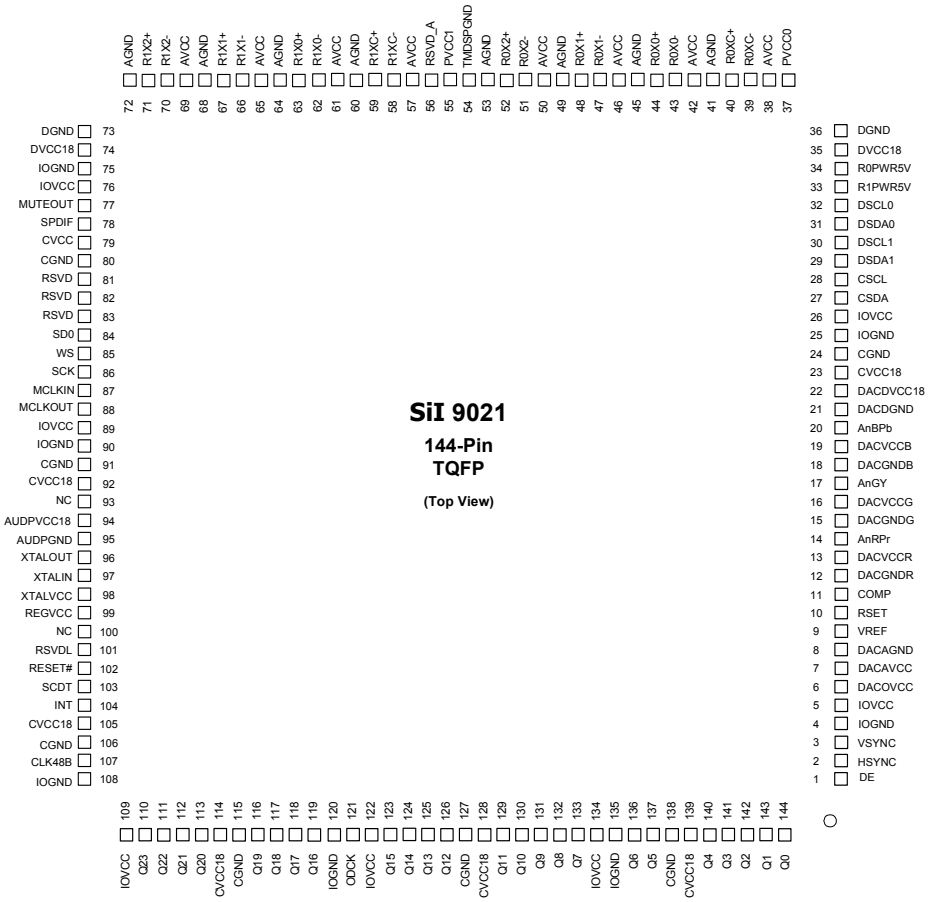
IC4401: LOW VOLTAGE OCTAL BUS TRANSCEIVER WITH 5V TOLERANT INPUTS AND OUTPUTS.
Part number: TC74LCX245FS
Sharp code: VHICLCX245-2Y
The device is designed for working in 3.3V systems but could be used to interface to 5V supply environment for both inputs and outputs. The direction of the data transmission is controlled by the level of the DIR input. The OE input could be used to isolate the device of the busses (PCMCIA and Digital Processor).

IC4404: LOW VOLTAGE BUFFER / LINE DRIVER WITH 5V TOLERANT INPUTS AND OUTPUTS.
Part number: 74LCX244AE
Sharp code: VHILCX244MT-1Y
The LCX244 contains eight non-inverting buffers with 3-STATE outputs. The device may be employed as a memory address driver, clock driver and bus-oriented transmitter/receiver. The LCX244 is designed for low voltage (2.5V or 3.3V) VCC applications with capability of interfacing to a 5V signal environment.

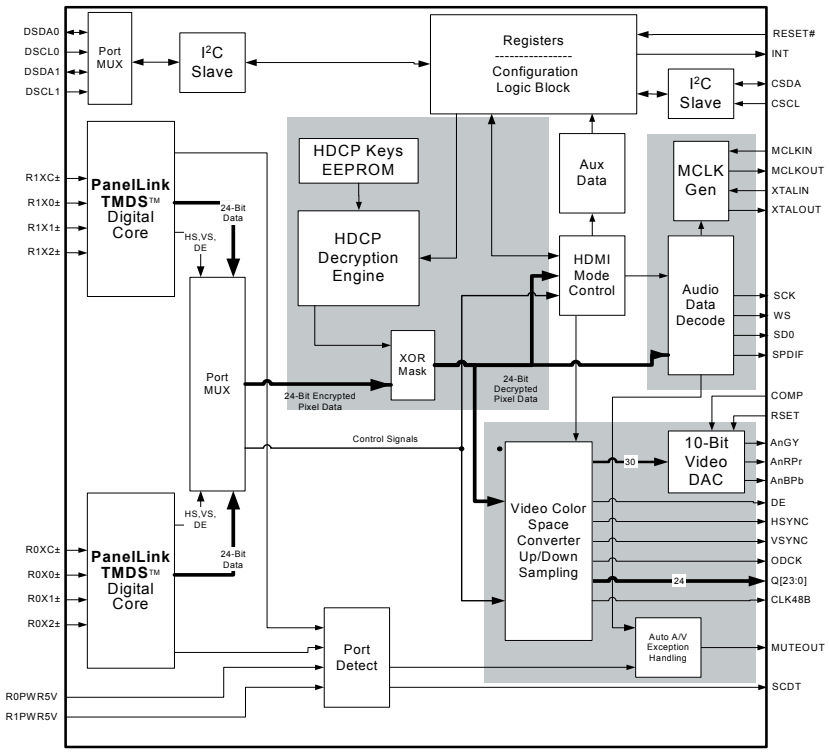
2. Detailed ICs Information

2.1. IC1905 (VHISII9021+-1Q)

2.1.1. Pinning



2.1.2. Block Diagram



The SiI 9021 supports two HDMI input ports. Only one port may be active at any time.

2.2. IC3002 (RH-IXB698WJZZQ)

2.2.1. Pin Connections and Short Description

IN = Input Pin
ANA = Analog Pin
OUT = Output Pin
SUPPLY = Supply Pin

NC = not connected
LV = if not used, leave vacant
OBL = obligatory; connect as described in circuit diagram

VCTP Pin No. PLQFP 208-1		Pin Name	Type	Connection (If not used)	Short Description
1		656O6 P4_6 TDOFW	IN/OUT	LV	Digital 656 Bit 6 Output Port 4, Bit 6 Input/Output JTAG Interface Data Output (firmw. Controler)
2		656O5 P4_5 TDIFW	IN/OUT	LV	Digital 656 Bit 5 Output Port 4, Bit 5 Input/Output JTAG Interface Data Input (firmw. Controler)
3		656O4 P4_4 TMSFW	IN/OUT	LV	Digital 656 Bit 4 Output Port 4, Bit 4 Input/Output JTAG Interface Mode Select Input (fw. Contr.)
4		656O3 P4_3 TCLK	IN/OUT	LV	Digital 656 Bit 3 Output Port 4, Bit 3 Input/Output JTAG Interface Clock Input (TV Controler)
5		656O2 P4_2 TDO	IN/OUT	LV	Digital 656 Bit 2 Output Port 4, Bit 2 Input/Output JTAG Interface Data Output (TV Controler)
6		656O1 P4_1 TDI	IN/OUT	LV	Digital 656 Bit 1 Output Port 4, Bit 1 Input/Output JTAG Interface Data Input (TV Controler)
7		656O0 P4_0 TMS	IN/OUT	LV	Digital 656 Bit 0 Output (LSB) Port 4, Bit 0 Input/Output JTAG Interface Mode Select Input (TV Contr.)
8		RESETQ	IN/OUT	OBL	$\overline{\text{Reset}}$ Input/Output
9		AIN1R	IN	GND	Analog Audio 1 Input, Right
10		AIN1L	IN	GND	Analog Audio 1 Input, Left
11		AIN2R	IN	GND	Analog Audio 2 Input, Right
12		AIN2L	IN	GND	Analog Audio 2 Input, Left
13		AIN3R	IN	GND	Analog Audio 3 Input, Right
14		AIN3L	IN	GND	Analog Audio 3 Input, Left
15		AIN4R	IN	GND	Analog Audio 4 Input, Right
16		AIN4L	IN	GND	Analog Audio 4 Input, Left
17		VREFAU	ANA	OBL	Reference Voltage, Audio
18		VSUP8.0AU	SUPPLY	OBL	Supply Voltage Analog Audio, 8.0 V
19		GNDA	SUPPLY	OBL	Ground Analog Audio, Platform Ground
20		SGND	ANA	OBL	Analog Signal GND

2.2.2. Pin Descriptions

2.2.2.1. Supply Pins

VSUP1.8DIG – Supply Voltage 1.8 V
This pin is main and standby supply for the digital core logic of controller, video and display processing.

VSUP1.8FE – Supply Voltage 1.8 V
This pin is main and standby supply for the analog video frontend.

VSUP3.3FE – Supply Voltage 3.3 V
This pin is main and standby supply for the analog video frontend.

VSUP3.3VO – Supply Voltage 3.3 V
This pin is main and standby supply for the analog video outputs.

VSUP1.8LVDS – Supply Voltage 1.8 V
This pin is main and standby supply for the analog LVDS core.

VSUP3.3LVDS – Supply Voltage 3.3 V
This pin is main and standby supply for the Digital LVDS port.

VSUP3.3FL – Supply Voltage 3.3 V
This pin is main and standby supply for the Flash device.

VSUP3.3DRI – Supply Voltage 3.3 V
This pin is main supply for the digital RAM interface.

VSUP3.3RAM – Supply Voltage 3.3 V
This pin is main supply for the RAM device

VSUP3.3IO 1-3 – Supply Voltage 3.3 V
This 3 pins are main and standby supply for the digital I/O-ports.

VSUP3.3COM – Supply Voltage 3.3 V
This pin is main and standby supply for the digital Input ports and common digital logic.

VSUP3.3DIG – Supply Voltage 3.3 V
This pin is main supply for the digital core logic of IF and audio processing and digital video backend.

VSUP8.0AU – Supply Voltage 8.0 V
This pin is main supply for the analog audio processing.

VSUP5.0SIF – Supply Voltage 5.0 V
This pin is main supply for the SIF processing.

VSUP3.3DAC – Supply Voltage 3.3 V
This pin is main and standby supply for the Analog DAC.

GND* – Ground
This pin are main ground for all digital analog and port supplies.

Application Note:

All GND pins must be connected to a low-resistive ground plane underneath the IC. All supply pins must be connected separately with short and low-resistive lines to the power supply. Decoupling capacitors from VSUPxx to GND have to be placed as closely as possible to these pins. It is recommended to use more than one capacitor. By choosing different values, the frequency range of active decoupling can be extended.

2.2.2.2 Audio Pins

VREFAU – Reference Voltage for Analog Audio
This pin serves as the internal ground connection for the analog audio circuitry. It must be connected to the **GND** pin with a 3.3 µF and a 100 nF capacitor in parallel.

SGND – Analog Reference Input
This is the reference ground Analog Audio part.

AIN1 R/L – Audio 1 Inputs
The analog input signal for audio 1 is fed to this pin. Analog input connection must be AC coupled.

AIN2 R/L – Audio 2 Inputs
The analog input signal for audio 2 is fed to this pin. Analog input connection must be AC coupled.

AIN3 R/L – Audio 3 Inputs
The analog input signal for audio 3 is fed to this pin. Analog input connection must be AC coupled.

AIN4 R/L – Audio 4 Inputs
The analog input signal for audio 4 is fed to this pin. Analog input connection must be AC coupled.

AIN5 R/L – Audio 5 Inputs
The analog input signal for audio 5 is fed to this pin. Analog input connection must be AC coupled.

AOUT1 R/L – Audio 1 Outputs
Output of the analog audio 1 signal. Connections to these pins are intended to be AC coupled.

AOUT2 R/L – Audio 2 Outputs
Output of the analog audio 2 signal. Connections to these pins are intended to be AC coupled.

SPEAKER R/L – Loudspeaker Outputs
Output of the loudspeaker signal.

HEADPHONES R/L – Headphones Outputs
Output of the headphones signal.

2.2.2. Pin Descriptions (Continued)

SUBWOOFER – Subwoofer Outputs
Output of the subwoofer signal

I2S_DEL_WS - Delay Line Bus Word Strobe
This is the word strobe signal of the delay line bus.

I2S_DEL_CL - Delay Line Bus Clock
This is the Clock signal of the delay line bus.

I2S_DEL_IN - Delay Line Bus Data Input
This is the data input signal of the delay line bus.

I2S_DEL_OUT - Delay Line Bus Data Output
This is the data output signal of the delay line bus.

I2S_WS - I2S Word Strobe
This is the word strobe signal of I2S bus.

I2S_DA_IN - I2S Data Input
This is the data input signal of I2S bus.

I2S_CL - I2S Clock
This is the Clock signal of I2S bus.

SPDIF_OUT -
This is an SPDIF output signal to connect to an A/V receiver.

SIF –/+ – Sound IF Input
This is the SIF input to connect to an external DRX.

VREFSIF – Reference Voltage for SIF
This pin serves as the internal ground connection for the analog audio circuitry.

2.2.2.3 Video Pins

656I 0-7 – Digital 656 Data Input
These are the 8 bits digital 656 video inputs.

656CLKI – Digital 656 Input clock
This is the clock for the digital 656 video inputs.

656O 0-7 – Digital 656 Data Output
These are the 8 bits digital 656 video outputs.

656CLKO– Digital 656 output clock
This is the clock for the digital 656 video outputs.

OSDR 0-3 – Graphic Data input/output
These are the 2 or 4 bit graphic input/output

OSDG 0-3 – Graphic Data input/output
These are the 2 or 4 bit graphic input/output

OSDB 0-3 – Graphic Data input/output
These are the 2 or 4 bit graphic input/output

OSDHCS 0-1 – Graphic Half Contrast Input/Output
This is the half contrast for the graphic input/output

OSDFSW – Graphic Fast Switch Input/Output
This is the fast switch for the graphic input/output

OSDCLK – Graphic clock Input/Output
This is the clock for the graphic video input/output

OSDV – Graphic vertical sync Input/Output
This is the vertical sync for the graphic input/output

OSDH – Graphic horizontal sync Input/Output
This is the horizontal sync signal for the graphic I/O

DRO1_ 0-9 - Digital Red Outputs
This are 10 bits digital signals for red outputs, for dual RGB use bits (0-7).

DGO1_ 0-9 - Digital Green Output
This are 10 bits digital signals for green outputs, for dual RGB use bits (0-7).

DBO1_ 0-9 - Digital Blue Outputs
This are 10 bits digital signals for blue outputs, for dual RGB use bits (0-7).

DRO2_ 0-7 - Digital dual Red Outputs
This are 8 bits digital signals for red outputs.

DGO2_ 0-7 - Digital dual Green Output
This are 8 bits digital signals for green outputs.

DBO2_ 0-7 - Digital dual Blue Outputs
This are 8 bits digital signals for blue outputs.

PCS 0-5 - LCD Panel Control Select Outputs
This are 6 control select signals for LCD outputs.
For CRT application use PCS_0 as H sync and PCS_1 as V sync Back End.

PCLK1,2 - LCD Panel Clock Outputs
This are the clock signals for LCD/RGB outputs.

LVDSA_* - LCD Panel LVDS Outputs
This are 12 signals and clocks for LVDS single or dual output.

LVDSB_* - LCD Panel LVDS Outputs
This are 10 signals and clocks for LVDS dual output.

REXT - LVDS External Resistor
This pin is connected to the external LVDS resistor. (6.2 kOhm to gnd)

DRI 0-7 - Digital video inputs for Red
This are 8 bits digital inputs for red signal

DGI 0-7- Digital video inputs for Green
This are 8 bits digital inputs for green signal

DBI 0-7- Digital video inputs for Blue
This are 8 bits digital inputs for blue signal.

DEN - Digital video inputs Enable
This is the enable signal for the Digital Video Inputs.

DHS - Digital video inputs Horizontal Sync
This is the H Sync signal for the Digital RGB input bus or for the VGA Video Inputs.

DVS - Digital video inputs Vertical Sync
This is the V Sync signal for the Digital RGB input bus or for the VGA Video Inputs.

DCLK - Digital video inputs Clock
This is the Clock signal for the Digital Video Inputs.

CLKOUT – Digital Output clock
This is a 20MHz clock for the external video ICs.

VIN 1–22 – Analog Video Input
These are the 19 analog video inputs.
(Vin 4,10 and 14 are missing)
A CVBS, S-VHS, YCrCb or RGB signal is converted using the luma, chroma and component AD converter.
Vin 8,18 are fast blank inputs. Vin22 is an Hsync input.
The input signals must be AC-coupled.

VOUT 1-3 – Analog Video Output
The analog video inputs that are selected by the video matrix are output at these pins.

ROUT, GOUT, BOUT – Analog RGB Output
These pins are the analog Red/Green/Blue outputs of the back-end.

SVMOUT – Scan Velocity Modulation Output
This output delivers the analog SVM signal. The D/A converter is a current sink like the RGB D/A converters. At zero signal the output current is 50% of the maximum output current.

2.2.2.4 Controller Pins

XTALIN Crystal Input and **XTALOUT** Crystal Output
These pins are connected to an 20.25 MHz crystal oscillator. An external clock can be fed into XTALIN.

RESETQ – Reset Input/Output
A low level on this pin resets the VCT 69xyP. The internal CPU can pull down this pin to reset external devices connected to this pin.

TEST – Test Input
This pin enables factory test modes. For normal operation, it must be connected to ground.

SCL – I^2C Bus Clock
This pin delivers the I^2C bus clock line. The signal can be pulled down by external slave ICs to slow down data transfer.

SDA – I^2C Bus Data
This pin delivers the I^2C bus data line.

P1_0–**P1_3** – I/O Port
These pins provide CPU controlled I/O ports.

P1_4–**P1_7** – I/O Port
These pins provide CPU controlled I/O ports.
Also used as **CADC1**–**4** – Controller A/D inputs 1 to 4.
This 4 pins are analog/digital converters from the controller

P2_0–**P2_7** – I/O Port
These pins provide CPU controlled I/O ports.

P3_0–**P3_7** – I/O Port
These pins provide CPU controlled I/O ports.

P4_0–**P4_7** – I/O Port
These pins provide CPU controlled I/O ports.

TDO-TCLK-TDI-TMS -JTAG Interface Pins for TV controler.
TCLK at pin 4 (656O3) has during reset an internal pull up: (TCLK=0) at end of reset enables the JTAG mode at 656 LSB's, this can also be done via I2C.
This JTAG is also available at Port(1 and 2) but only via I2C.

TDOFW-TCLKFW-TDIFW-TMSFW -JTAG Interface Pins for firmware controler.
TCLKFW at pin 208 (656O7) has during reset an internal pull up: (TCLKFW=0) at end of reset enables the JTAG mode, this can also be done via I2C.

2.2.3. Pinning

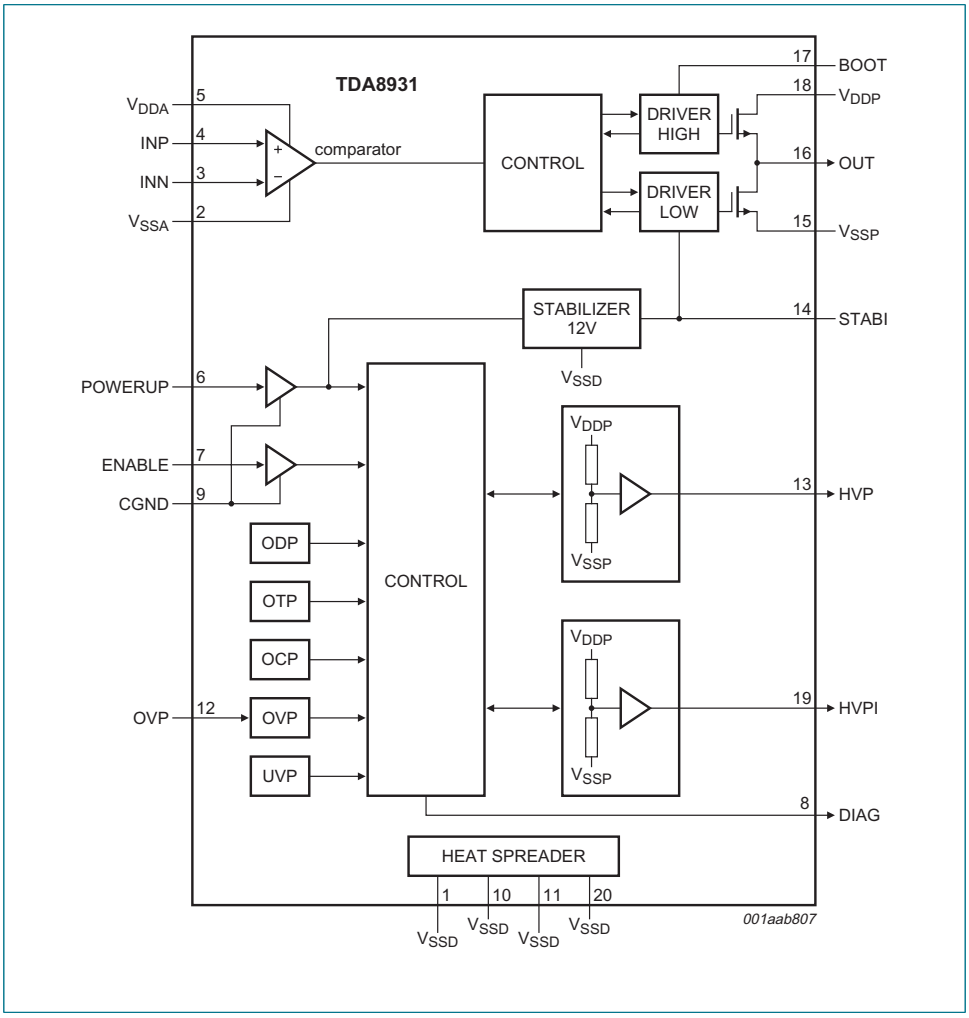
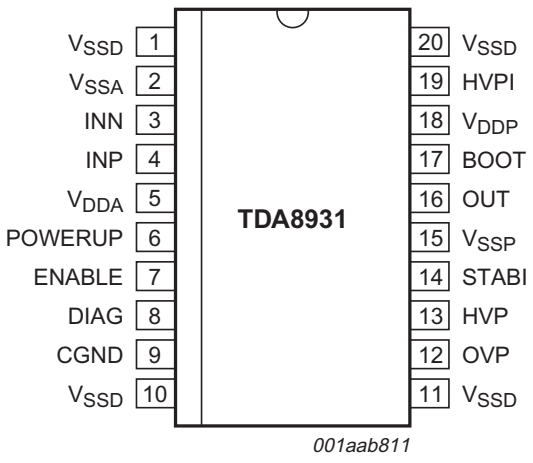
2.3.1. Block Diagram

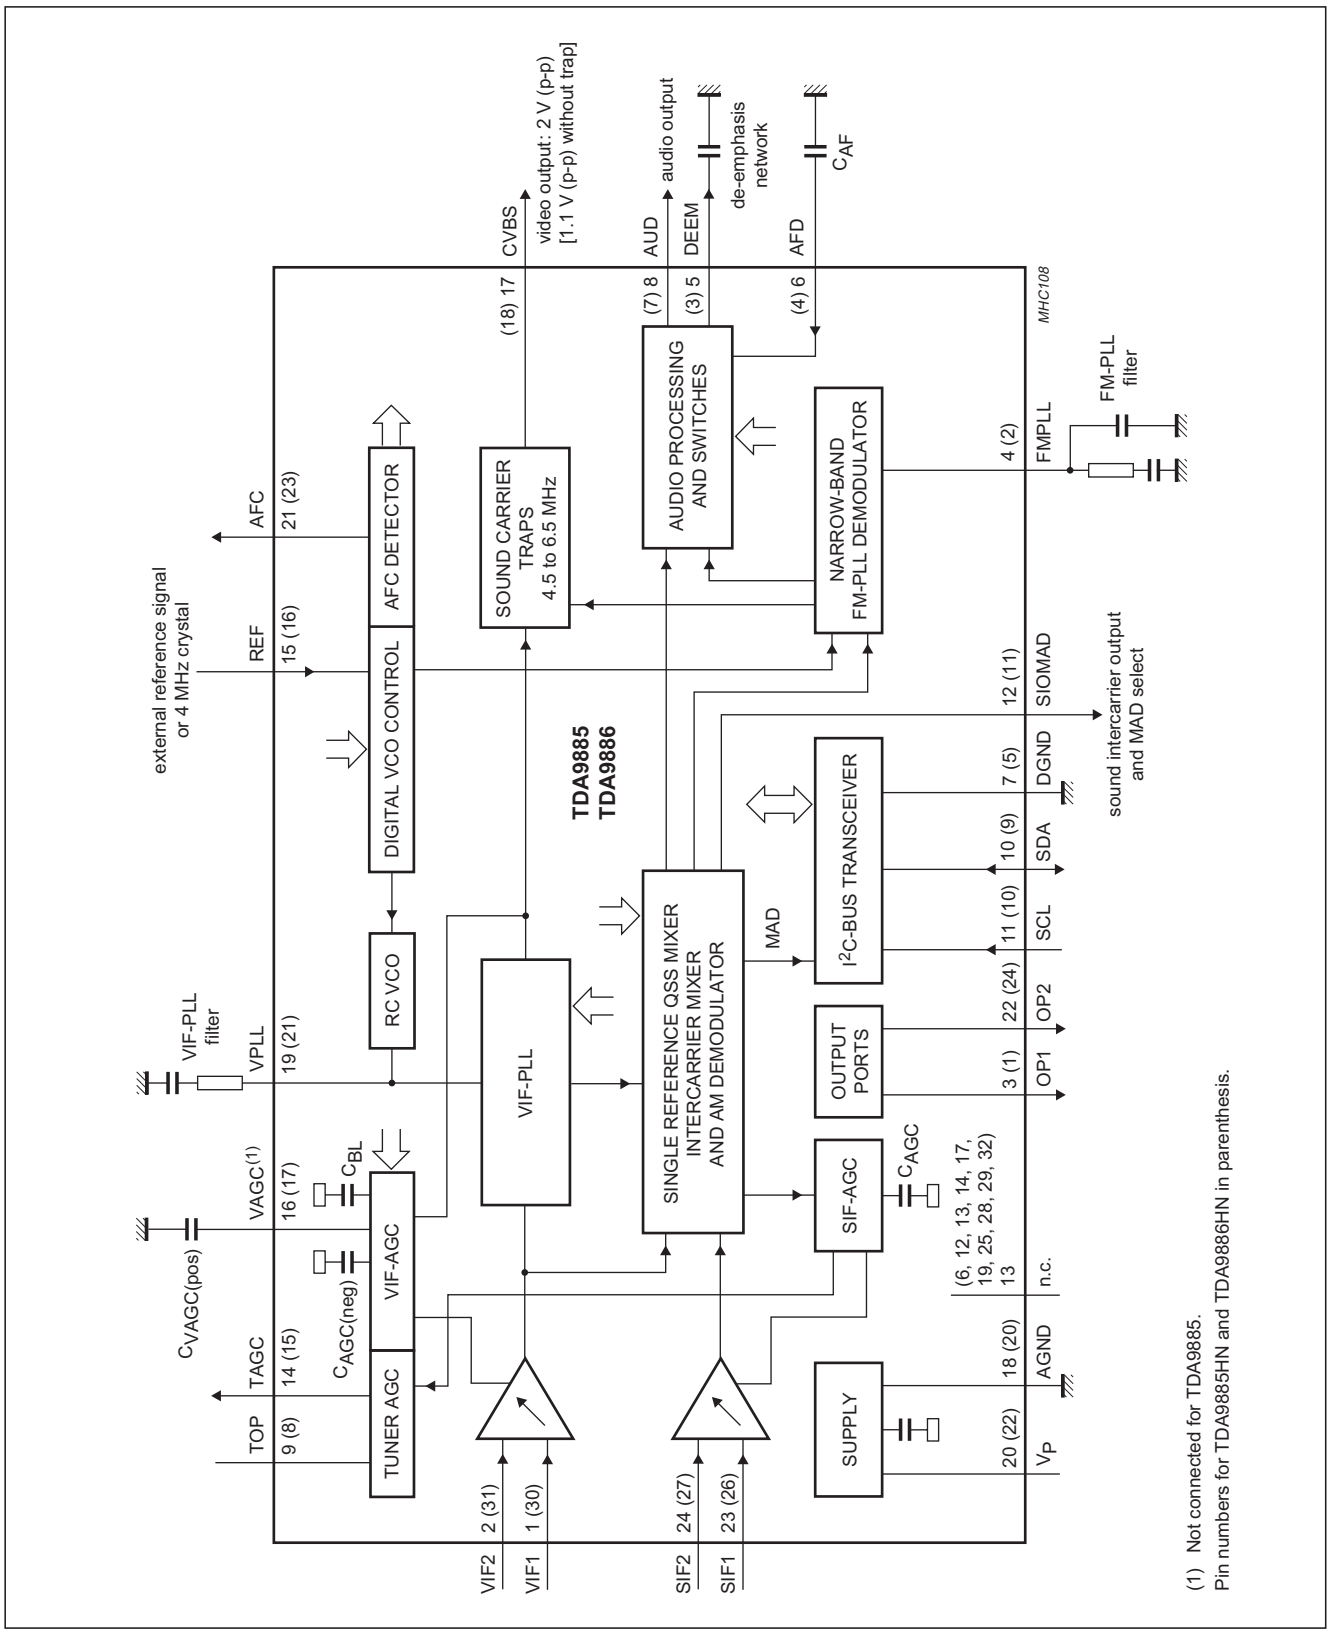


2.3.2. Pinning



2.4. IC201 (VHITDA9886+-1Y)

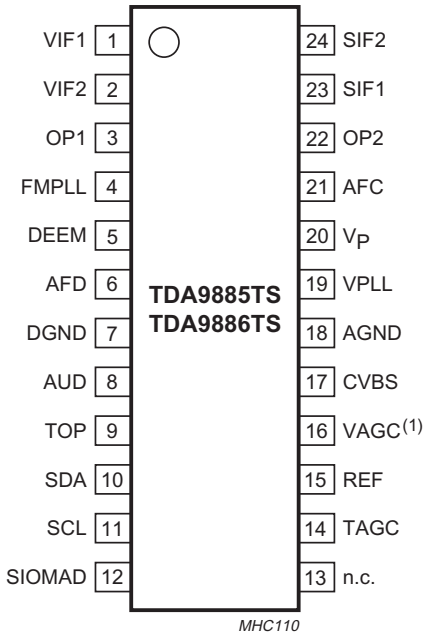
2.4.1. Block Diagram



2.4.2. Pinning

SYMBOL	PIN				DESCRIPTION
	TDA9885T TDA9885TS	TDA9886T TDA9886TS	TDA9885HN	TDA9886HN	
VIF1	1	1	30	30	VIF differential input 1
VIF2	2	2	31	31	VIF differential input 2
n.c.	–	–	32	32	not connected
OP1	3	3	1	1	output port 1; open-collector
FMPLL	4	4	2	2	FM-PLL for loop filter
DEEM	5	5	3	3	de-emphasis output for capacitor
AFD	6	6	4	4	AF decoupling input for capacitor
DGND	7	7	5	5	digital ground
n.c.	–	–	6	6	not connected
AUD	8	8	7	7	audio output
TOP	9	9	8	8	tuner AGC TakeOver Point (TOP) for resistor adjustment
SDA	10	10	9	9	I^2C-bus data input and output
SCL	11	11	10	10	I^2C-bus clock input
SIOMAD	12	12	11	11	sound intercarrier output and MAD select with resistor
n.c.	–	–	12	12	not connected
n.c.	13	13	13	13	not connected
n.c.	–	–	14	14	not connected
TAGC	14	14	15	15	tuner AGC output
REF	15	15	16	16	4 MHz crystal or reference signal input
VAGC	–	16	–	17	VIF-AGC for capacitor
n.c.	16	–	17	–	not connected
CVBS	17	17	18	18	composite video output
n.c.	–	–	19	19	not connected
AGND	18	18	20	20	analog ground
VPLL	19	19	21	21	VIF-PLL for loop filter
V_P	20	20	22	22	supply voltage
AFC	21	21	23	23	AFC output
OP2	22	22	24	24	output port 2; open-collector
n.c.	–	–	25	25	not connected
SIF1	23	23	26	26	SIF differential input 1 and MAD select with resistor
SIF2	24	24	27	27	SIF differential input 2 and MAD select with resistor
n.c.	–	–	28	28	not connected
n.c.	–	–	29	29	not connected

2.4.2. Pinning (Continued)

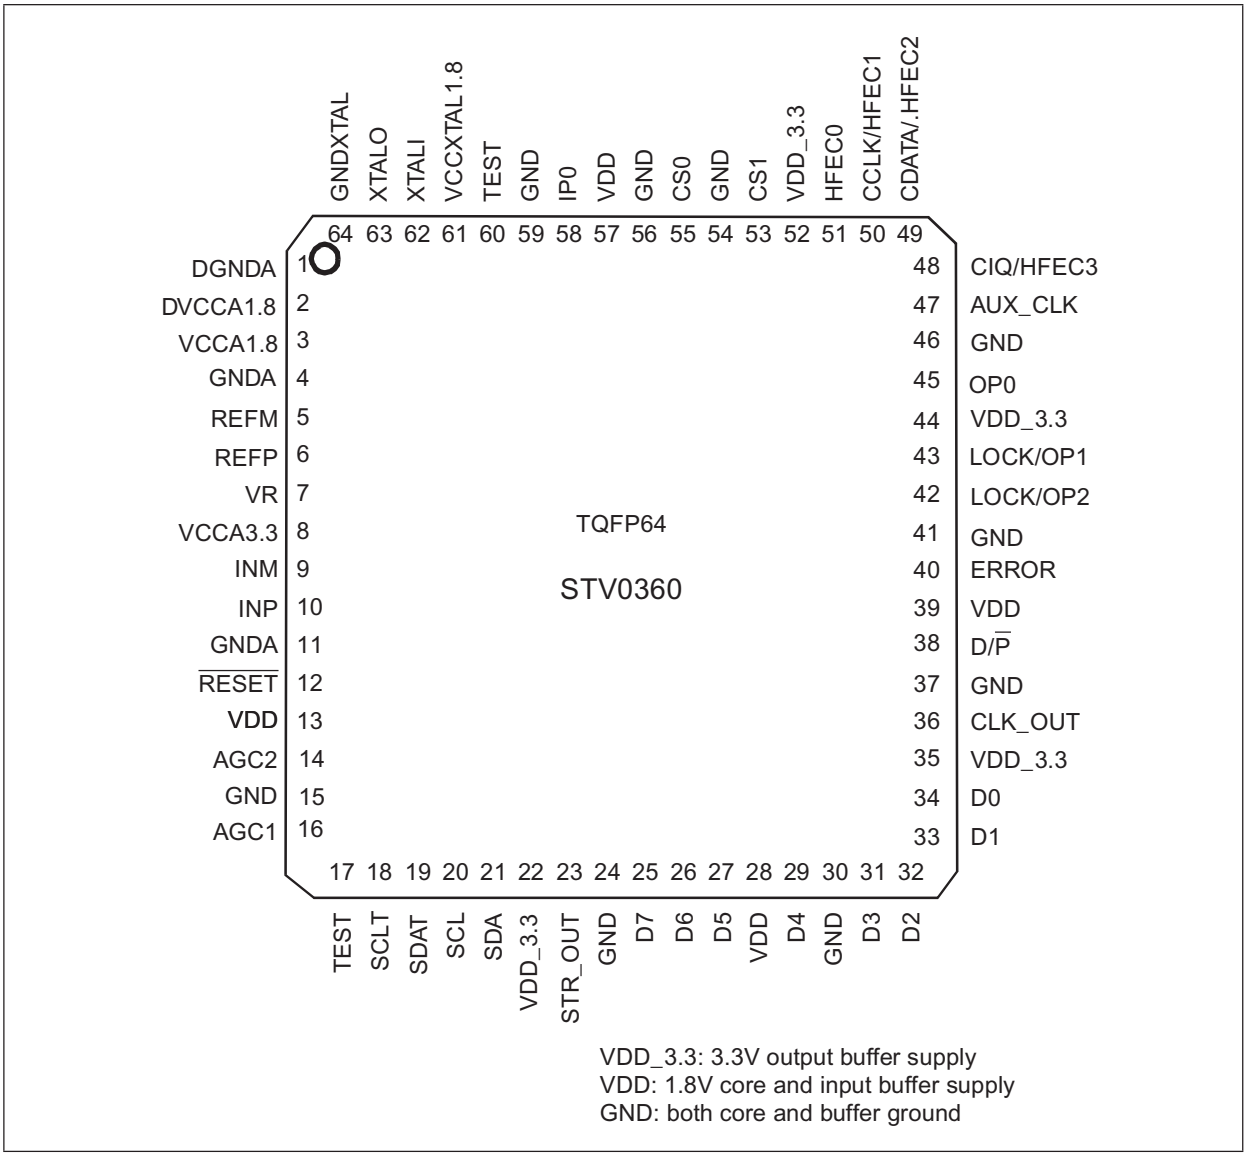


(1) Not connected for TDA9885TS.

Fig.3 Pin configuration for SSOP24.

2.5. IC202 (STV0360)

2.5.1. Pinning



2.5.2. Pin Description

Pin number	Name	Type	Description	Drive (mA)
Clock and resets				
12	$\overline{\text{RESET}}$	I[1]	Hardware reset, active low	-
62	XTALI	Analog	Crystal oscillator input/external clock (1.8 V)	-
63	XTALO	Analog	Crystal oscillator output	-
61	VCCXTAL1.8	Supply	Analog oscillator supply (1.8 V)	-
64	GNDXTAL	Ground	Analog oscillator ground	-
Analog interface				
2	DVCCA1.8	Supply	Analog part digital supply (1.8 V)	-
5	REFM	Analog	Internal negative reference	-
6	REFP	Analog	Internal positive reference	
3	VCCA1.8	Supply	Analog supply (1.8 V)	-
9	INM	Analog	Negative analog input	-
10	INP	Analog	Positive analog input	-
4, 11	GNDA	Supply	Analog ground	-
1	DGNDA	Ground	Analog ground	-
7	VR	Analog	Reference	-
8	VCCA3.3	Supply	Analog supply (3.3 V)	
I^2C interface				
21	SDA	IO[2]	Serial data (open drain)	8
20	SCL	I	Serial clock (open drain)	-
19	SDAT	IO	SDA tuner (open drain)	4
18	SCLT	I	SCL tuner	
MPEG interface				
25, 26, 27, 29, 31, 32, 33, 34	D7/0	O[3]	Serial D7, MPEG data	8/4
36	CLK_OUT	O	MPEG byte or bit clock	4
23	STR_OUT	O	MPEG first byte sync	2
38	D/$\overline{\text{P}}$	O	MPEG data valid/parity	4
40	ERROR	O	MPEG packet error	2
51	HFEC0	O	Hierarchical FEC output bit 0	2
50	CCLK/HFEC1	O	Hierarchical FEC output bit 1 or clock for constellation display	2
49	CDATA/HFEC2	O	Hierarchical FEC output bit 2 or data for constellation display	2
48	CIQ/HFEC3	O	Hierarchical FEC output bit 3 or IQ validation for constellation display	2

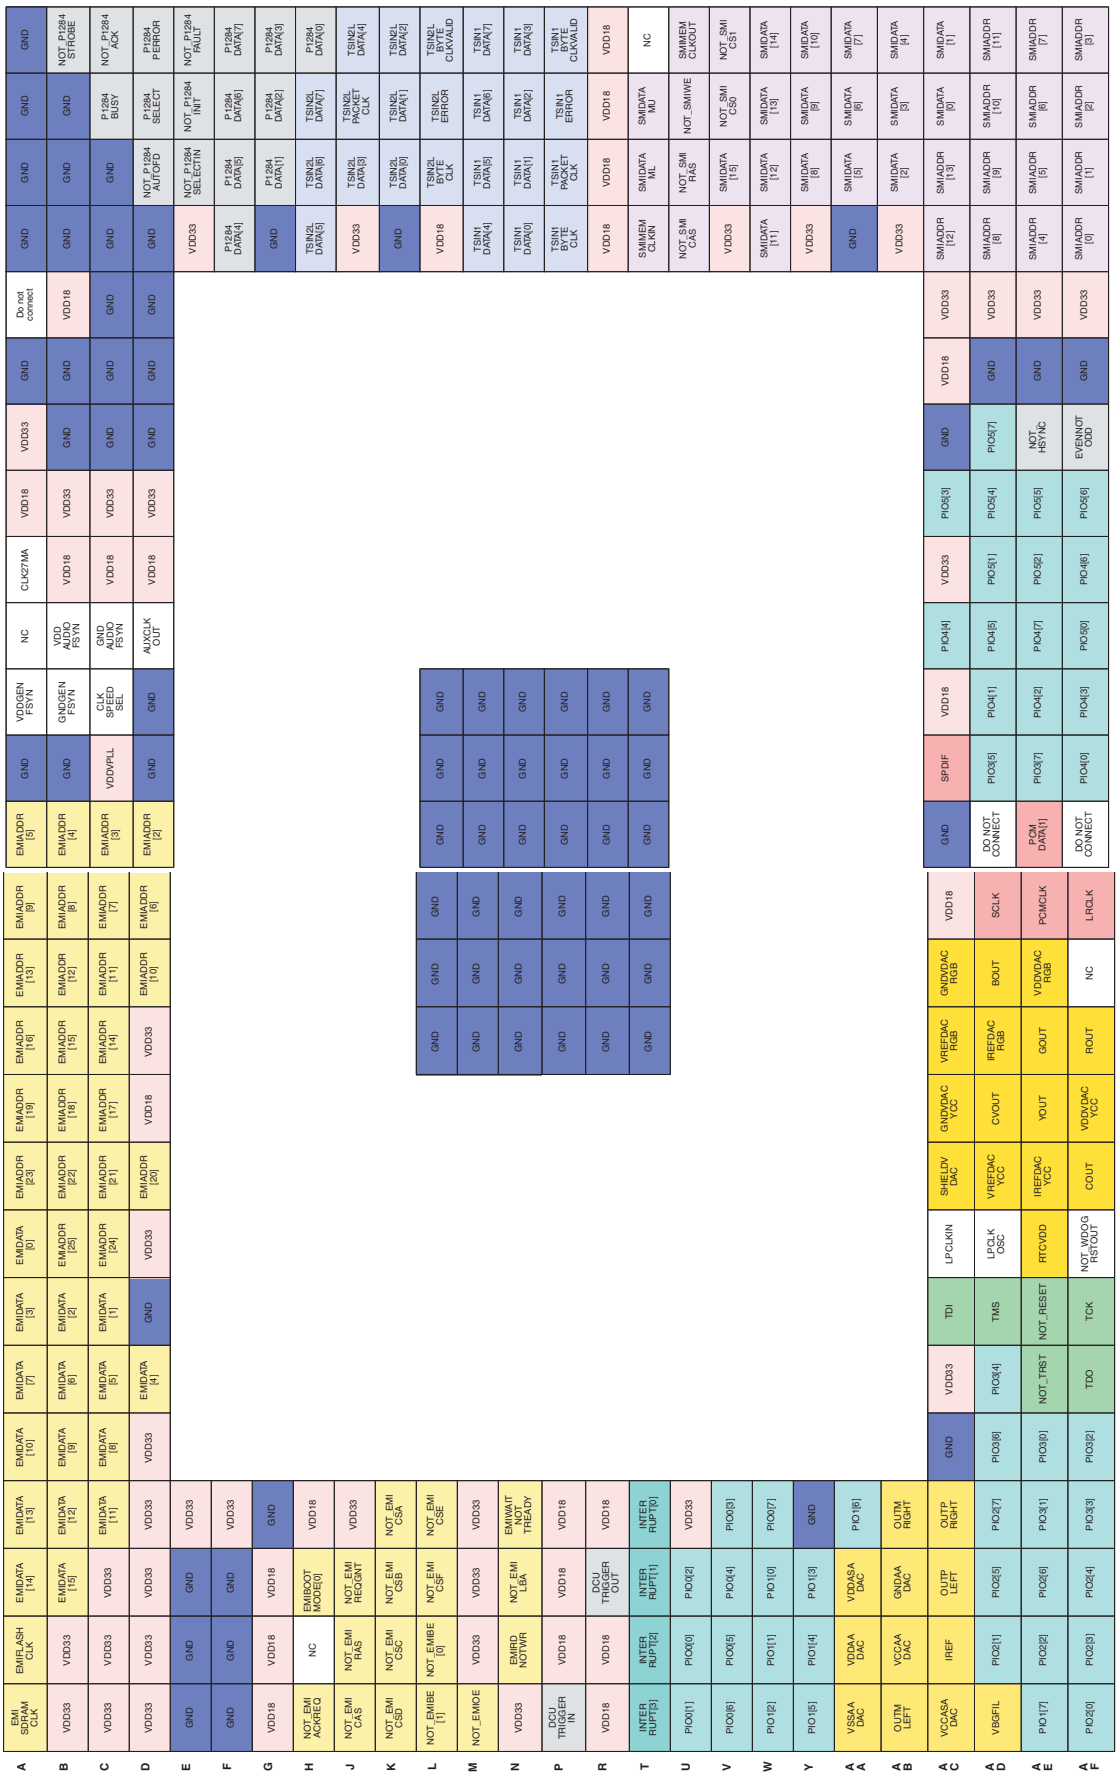
2.5.2. Pin Description (Continued)

Pin number	Name	Type	Description	Drive (mA)
Front end controls				
16	AGC1	IO	RF AGC control ΣΔ	4
14	AGC2	IO	IF AGC control ΣΔ	4
17, 60	TEST		Reserved test mode, must be grounded	
58	IP0	I	General-purpose input port 0 and ADC input for RF level monitoring	-
45	OP0	IO	General-purpose output port 0	4
43	LOCK/OP1	IO	General-purpose output port 1 or lock indicator	4
42	LOCK/OP2	O	General-purpose output port 2 or lock indicator	4
47	AUX_CLK	IO	Auxiliary clock	8
55	CS0	I	Chip select LSB	-
53	CS1	I	Chip select MSB	-
Power supply				
13, 28, 39, 57	VDD	Supply	Digital core supply	
22, 35, 44, 52	VDD_3.3	Supply	Digital IO supply	
15, 24, 30, 37, 41, 46, 54, 56, 59	GND	Ground		

1. All inputs are 3.3 V compatible
2. All bidirectional pads are 3.3 V capable
3. All outputs are 3.3 V capable

2.6. IC4001 (Sti5516)

2.6.1. Pinning



2.6.2. Pin Description

STi5516 pin list

Signal names are prefixed by NOT_ if they are active low; otherwise they are active high.
All signals are only 3.3 V capable unless otherwise indicated as 1.8 V or 5 V tolerant.

Table 2: I/O load capacitance and DC loading

Pad type	Functional pin group	Maximum load capacitance (pF)	Drive (mA)	Notes
C4	Others	75	4	
S8	SDRAM/EMI	75	8	
S8b	SDRAM/EMI	75	8	
E8	EMI (programmable)	35	8	a
		25	6	a
		15	4	a
		5	2	a
P4	PIO	400	4	

a. Typical load, but the maximum is 75 pF

Table 3: Analog power supply pins

Pin	Location	Number	Function
VDDVDACRGB	AE12	1	3.3 V power supply for RGB video DAC
VDDVDACYCC	AF10	1	3.3 V power supply for YCC video DAC
GNDVDACRGB	AC12	1	Ground for RGB video DAC
GNDVDACYCC	AC10	1	Ground for YCC video DAC
SHIELDVDAC	AC9	1	Shield ground for 2 x video DACs
IREFDACRGB	AD11	1	RGB video DAC current reference
IREFDACYCC	AE9	1	YCC video DAC current reference
VREFDACRGB	AC11	1	RGB video DAC voltage reference
VREFDACYCC	AD9	1	YCC video DAC voltage reference
VDDVPLL	C15	1	3.3 V power for video PLL
VDDAUDIOFSYN	B17	1	1.8 V dedicated power for low jitter audio clock frequency synthesizer
GNDAUDIOFSYN	C17	1	Dedicated ground for low jitter audio clock frequency synthesizer
VDDGENFSYN	A16	1	1.8 V dedicated power for nonaudio clock frequency synthesizer
GNDGENFSYN	B16	1	Dedicated ground for nonaudio clock frequency synthesizer
VDDAADAC	AA2	1	3.3 V power for audio DAC
VSSAADAC	AA1	1	Ground for audio DAC command switches

2.6.2. Pin Description (Continued)

Table 3: Analog power supply pins

Pin	Location	Number	Function
VDDASADAC	AA3	1	3.3 V power for audio DAC substrate
VCCAADAC	AB2	1	3.3 V power for audio DAC command switches
GNDAADAC	AB3	1	Ground for audio DAC
VCCASADAC	AC1	1	3.3 V power for audio DAC command switches substrate
IREF	AC2	1	Audio DAC output reference current
VBGFIL	AD1	1	Audio DAC filtered output reference voltage

Table 4: Digital power supply pins

Pin	Location	Number	Function
VDD18	a	24	1.8 V power supply
VDD33	b	35	3.3 V power supply
RTCVDD	AE8	1	Low power controller 1.8 V power supply
GND	c	76	Ground for power supplies

a. A19, B18, B22, C18, D10, D18, G1 to G3, H4, L23, P2 to P4, R1, R2, R4, R23 to R26, AC13, AC16 and AC21.

b. A20, B1, B2, B19, C1 to C3, C19, D1 to D5, D8, D11, D19, E4, E23, F4, J4, J23, M2 to M4, N1, U4, V23, Y23, AB23, AC6, AC18, AC22, AD22, AE22 and AF22.

c. A15, A21, A23 to A26, B15, B20, B21, B23 to B25, C20 to C24, D7, D15, D16, D20 to D23, E1 to E3, F1 to F3, G4, G23, K23, L11 to L16, M11 to M16, N11 to N16, P11 to P16, R11 to R16, T11 to T16, Y4, AA23, AC5, AC14, AC20, AD21, AE21 and AF21.

Table 5: RTC pins

Pin	Location	I/O	Function
LPCLKIN[a]	AC8	I	Low power clock input
LPCLKOSC[A]	AD8	I/O	Low power clock oscillator

a. 1.8 V tolerant

2.6.2. Pin Description (Continued)

Table 6: System pins

Pin	Location	I/O	Function	Pad type
CLK27MA[A]	A18	I	Selectable input clock to PLL or for x1 mode	C4
CLKSPEEDSEL[a]	C16	I	PLL speed select	C4
AUXCLKOUT[a]	D17	O	Auxiliary clock for general use	C4
NOT_RESET[B]	AE7	I	System reset	-
NOT_WDOGRSTOUT[a]	AF8	O	Internal watchdog timer reset.	C4

a. 5 V tolerant
b. 1.8 V tolerant

Table 7: JTAG pins

Pin	Location	I/O	Function	Pad type
TDI[A]	AC7	I	Boundary scan test data input	C4
TMS[a]	AD7	I	Boundary scan test mode select	C4
TCK[a]	AF7	I	Boundary scan test clock	-
NOT_TRST[a]	AE6	I	Boundary scan test logic reset	C4
TDO[a]	AF6	O	Boundary scan test data output	C4

a. 5 V tolerant

Table 8: DCU pins

Pin	Location	I/O	Function	Pad type
DCUTRIGGERIN[a]	P1	I	External trigger input to DCU	C4
DCUTRIGGEROUT[A]	R3	O	Signal to trigger external debug circuitry	C4

a. 5 V tolerant

2.6.2. Pin Description (Continued)

Table 9: EMI pins

Pin	Location	I/O	Function	Pad type
NOT_EMIRAS or NOT_CI_IORD[a]	J2	O	Row address strobe for SDRAM	C4
NOT_EMICAS or NOT_CI_IOW[a]	J1	O	Column address strobe for SDRAM	E8
NOT_EMICSA	K4	O	Peripheral chip select A	E8
NOT_EMICSB	K3	O	Peripheral chip select B	E8
NOT_EMICSC	K2	O	Peripheral chip select C	E8
NOT_EMICSD	K1	O	Peripheral chip select D	E8
NOT_EMICSE	L4	O	Peripheral chip select E	E8
NOT_EMICSF	L3	O	Peripheral chip select F	E8
NOT_EMIBE[1:0]	L1, L2	O	External device data bus byte enable. 1 bit per byte of the data bus.	E8
NOT_EMIOE or NOT_CI_OE	M1	O	External device output enable.	E8
NOT_EMILBA or NOT_CI_WEA	N3	O	Flash device load burst address.	E8
EMIWAITNOTTREADY[b]	N4	I	External memory device target ready indicator	C4
EMIRDNOTWR	N2	O	External read/write access indicator. Common to all devices.	E8
EMIDATA[15:0]	c	I/O	External common data bus.	E8
EMIADDR[25:2][d]	e	O	External common address bus	E8
NOT_EMIREQGNT	J3	O	Bus request/grant indicator	E8
NOT_EMIACKREQ[b]	H1	I	Bus grant/request indicator	C4
EMIBOOTMODE0[b]	H3	I	External power-up port size indicator	C4
EMISDRAMCLK	A1	O	SDRAM clock	E8
EMIFLASHCLK	A2	O	Peripheral clock	E8

a. Or equivalent ATA HDD interface signal.

b. 5 V tolerant

c. B3, A3, A4, B4, C4, A5, B5, C5, A6, B6, C6, D6, A7, B7, C7 and A8.

d. EMIADDR[19:20] are used as ATA HDD interface function: ATA CS0 and CS1. There is no interconnect configuration control register bit to select this function. The addresses are just reused as chip selects.

e. B8, C8, A9, B9, C9, D9, A10, B10, C10, A11, B11, C11, A12, B12, C12, D12, A13, B13, C13, D13, A14, B14, C14 and D14.

2.6.2. Pin Description (Continued)

Table 10: Transport stream 2 pins

Pin	Location	I/O	Function	Pad type
TSIN2LBYTECLK[a]	L24	I/O	Transport stream bit clock	C4
TSIN2LBYTECLKVALID[a]	L26	I/O	Transport stream bit clock valid edge	C4
TSIN2LERROR[a]	L25	I/O	Transport stream packet error	C4
TSIN2LPACKETCLK[a]	J25	I/O	Transport stream packet strobe	C4
TSIN2LDATA[7:0][a]	b c	I/O	Transport stream data	C4

a. 5 V tolerant
b. H25, H24, H23, J26, J24, K26, K25 and K24
c. TSIN2LDATA7 is used for data input in serial mode.

Table 11: Transport stream 1 pins

Pin	Location	I/O	Function	Pad type
TSIN1BYTECLK[a]	P23	I	Transport stream bit/byte clock	C4
TSIN1BYTECLKVALID[a]	P26	I	Transport stream bit/byte clock valid edge	C4
TSIN1ERROR[a]	P25	I	Transport stream packet error	C4
TSIN1PACKETCLK[a]	P24	I	Transport stream packet strobe	C4
TSIN1DATA[7:0][a]	b, c	I	Transport stream data in	C4

a. 5 V tolerant
b. M26, M25, M24, M23, N26, N25, N24 and N23.
c. TSIN1DATA7 is used for data input in serial mode.

2.6.2. Pin Description (Continued)

Table 12: Programmable I/O pins

Pin	Location	I/O	Function	Pad type
PIO0[0:7][A]	b	I/O	Parallel input/output pin or alternative function	P4
PIO1[0:7][a]	c	I/O		P4
PIO2[0:7][a]	d	I/O		P4
PIO3[0:7][a]	e	I/O		P4
PIO4[0:7][a]	f	I/O		P4
PIO5[0:7][a]	g	I/O		P4

a. 5 V tolerant
b. U2, U1, U3, V4, V3, V2, V1 and W4
c. W3, W2, W1, Y3, Y2, Y1, AA4 and AE1
d. AF1, AD2, AE2, AF2, AF3, AD3, AE3 and AD4
e. AE5, AE4, AF5, AF4, AD6, AD15, AD5 and AE15
f. AF15, AD16, AE16, AF16, AC17, AD17, AF18 and AE17
g. AF17, AD18, AE18, AC19, AD19, AE19, AF19 and AD20

Table 13: Digital audio pins[a]

Pin	Location	I/O	Function	Pad type
SCLK[B]	AD13	O	Serial clock	C4
PCMDATA[1][b]	AE14	O	PCM data out	C4
PCMCLK[b]	AE13	I/O	External PCM clock input or internal PCM clock output	C4
LRCLK[b]	AF13	O	Left/right clock	C4
SPDIF[b]	AC15	O	Digital audio output	C4

a. Note: Digital audio input pins PCMI_SCLK, PCMI_DATA and PCMI_LRCLK are alternate functions for NOT_CD_REQ[1], I1284HOSTLOGICHIGH, and NOT_CD_REQ[0], on PIO port 3 bits [6:4]
b. 5 V tolerant

2.6.2. Pin Description (Continued)

Table 14: AVSDRAM pins (SMI)

Pin	Location	I/O	Function	Pad type
SMIADDR[13:0]	a	O	Audio/video core SDRAM address bus	S8
SMIDATA[15:0]	b	I/O	Audio/video core SDRAM data bus	S8
NOT_SMICS0	V25	O	Audio/video core SDRAM chip select for 1st SDRAM	S8
NOT_SMICS1	V26	O	Audio/video core SDRAM chip select for 2nd 16 Mbit SDRAM	S8
NOT_SMICAS	U23	O	Audio/video core SDRAM column address strobe	S8
NOT_SMIRAS	U24	O	Audio/video core SDRAM row address strobe	S8
NOT_SMIWE	U25	O	Audio/video core SDRAM write enable	S8
SMIMEMCLKIN	T23	I	Audio/video core SDRAM memory clock input	S8b
SMIMEMCLKOUT	U26	O	Audio/video core SDRAM memory clock output	S8
SMIDATAML	T24	O	Audio/video core SDRAM data bus lower byte enable	S8
SMIDATAMU	T25	O	Audio/video core SDRAM data bus upper byte enable	S8

a. AC24, AC23, AD26, AD25, AD24, AD23, AE26, AE25, AE24, AE23, AF26, AF25, AF24 and AF23.

b. V24, W26, W25, W24, W23, Y26, Y25, Y24, AA26, AA25, AA24, AB26, AB25, AB24, AC26 and AC25.

Table 15: IEEE 1284/1394 pins

Pin	Location	I/O	Function	Pad type
P1284DATA[7:0][A]	b	I/O	1284 data or 1394 AV data	I14
NOT_P1284SELECTIN[a]	E24	I/O	1284 or 1394 AV control signals	I14
NOT_P1284INIT[a]	E25	I/O		I14
NOT_P1284FAULT[a]	E26	I/O		I14
NOT_P1284AUTOFD[a]	D24	I/O		I14
P1284SELECT[a]	D25	I/O		I14
P1284PERROR[a]	D26	I/O		I14
P1284BUSY[a]	C25	I/O		I14
NOT_P1284ACK[a]	C26	I/O		I14
NOT_P1284STROBE[a]	B26	I/O		I14

a. 5 V tolerant

b. F26, F25, F24, F23, G26, G25, G24 and H26.

2.6.3. Pin Description (Continued)

Table 16: Interrupt pins

Pin	Location	I/O	Function	Pad type
INTERRUPT[3:0][A]	[b]	I/O	External interrupts	C4

a. 5 V tolerant
b. T1, T2, T3 and T4.

Table 17: Analog audio DAC (digital-to-analog converter) pins

Pin	Location	I/O	Function
OUTPLEFT	AC3	O	Left channel, differential positive current output
OUTMLEFT	AB1	O	Left channel, differential negative current output
OUTPRIGHT	AC4	O	Right channel, differential positive current output
OUTMRIGHT	AB4	O	Right channel, differential negative current output

Table 18: Analog video DAC pins

Pin	Location	I/O	Function
ROUT	AF11	O	Red output
GOUT	AE11	O	Green output
BOUT	AD12	O	Blue output
COUT	AF9	O	Chroma output
CVOUT	AD10	O	Composite video output
YOUT	AE10	O	Luma output

Table 19: Digital video pins

Pin	Location	I/O	Function	Pad type
NOT_HSYNC[A]	AE20	I/O	Horizontal sync	C4
EVENNOTODD[a]	AF20	I/O	Vertical sync	C4

a. 5 V tolerant

2.6.3. Pin Description (Continued)

Table 20: Port 0 PIO signal assignments

Port 0 bit	Input	Output
Bit 0		SC0_DATAOUT or ASC0_TXD[a]
Bit 1	SC0_DATAIN or ASC0_RXD[a]	
Bit 2	SC0_CG_EXTCLK	
Bit 3		SC0CG_CLK or SMCDSS_CLK[b]
Bit 4		(SCO_RESET)
Bit 5		(SC0_NOT_SETVCC)
Bit 6		SC0_DIR or ASC0_NOTOE[c], (SC0_NOT_SETVPP)
Bit 7	(SC0_DETECT)	

a. ASC0 TX/RX data becomes smartcard TX/RX data when the ASC module is used in smartcard mode.

b. Output function between PIO or smartcard module clock generator alternate function and clock generator module frequency synthesizer clock is selected by bit 28 in the interconnect register CONFIG_CONTROL_A (SMCARDA_DSSSMCLK_NOT_PIOBIT3). If the DSS smartcard mode is selected (bit 28 = 1), this overrides the normal PIO or PIO alternate function output.

c. When ASC0 is used in nonsmartcard mode, the smartcard direction signal becomes an active low ASC TX output enable signal. The signals are in fact the same, that is, SC0_DIR = 0 means smartcard TX is active.

Table 21: Port 1 PIO signal assignments

Port 1 bit	Input	Output
Bit 0		SC1_DATAOUT or ASC1_TXD[a]
Bit 1	SC1_DATAIN or ASC1_RXD[a]	
Bit 2	SC1_CG_EXTCLK	
Bit 3		SC1CG_CLK or SMCDSS_CLK[b]
Bit 4		(SC1_RESET)
Bit 5	YC[1]	YC[1], (SC1_NOT_SETVCC)
Bit 6		SC1_DIR or ASC1_NOTOE[c], (SC1_NOT_SETVPP)
Bit 7	YC[0] (SC1_DETECT)	YC[0]

a. ASC1 TX/RX data becomes smartcard TX/RX data when the ASC module is used in smartcard mode.

b. Output function between PIO or smartcard module clock generator alternate function and clock generator module frequency synthesizer clock is selected by bit 29 in the interconnect register CONFIG_CONTROL_A (SMCARDB_DSSSMCLK_NOT_PIOBIT3). If the DSS smartcard mode is selected (bit 29 = 1) this overrides the normal PIO or PIO alternate function output.

c. When ASC1 is used in nonsmartcard mode the smartcard direction signal becomes an active low ASC TX output enable signal. The signals are in fact the same, that is, SC1 DIR = 0

2.6.3. Pin Description (Continued)

Table 22: Port 2 PIO signal assignments

Port 2 bit	Input	Output
Bit 0		MAFE_HC1 or NOT_ASC4_RTS[a]
Bit 1		MAFE_DOUT or ASC4_TXD[a]
Bit 2	MAFE_DIN or ASC4_RXD[a]	
Bit 3	MAFE_FS or NOT_ASC4_CTS[a]	
Bit 4	MAFE_SCLK	
Bit 5	PWM_CAPTURE0	
Bit 6		PWM_COMPARE0
Bit 7		PWM_OUT0

a. Controlled by bit MAFE_OR_UART4_SEL in interconnect register CONFIG_CONTROL_D (bit 20).

Table 23: Port 3 PIO signal assignments

Port 3 bit	Input	Output
Bit 0	SSC0_MTSR_DIN or SSC0_MRST_DIN	SSC0_MTSR_DOUT or SSC0_MRST_DOUT[a]
Bit 1	SSC0_SCLKIN	SSC0_SCLKOUT
Bit 2	SSC1_MTSR_DIN or SSC1_MRST_DIN	SSC1_MTSR_DOUT or SSC1_MRST_DOUT[b]
Bit 3	SSC1_SCLK	SSC1_SCLK
Bit 4	NOT_CD_REQ[0] or PCMI_LRCLK	I1284PERILOGICHIGH
Bit 5	Slave mode I1284HOSTLOGICHIGH or PCMI_DATA	Master mode I1284HOSTLOGICHIGH
Bit 6	NOT_CD_REQ[1] or PCMI_SCLK	I1284INNOTOUT
Bit 7		PWM_OUT1

a. Output function selected by bit 24 in interconnect configuration register CONFIG_CONTROL_B (COMMS_SSC0_DOUT_MRST_NOTMTSR_MUXSEL)

b. Output function selected by bit 25 in interconnect configuration register CONFIG_CONTROL_B (COMMS_SSC1_DOUT_MRST_NOTMTSR_MUXSEL)

2.6.3. Pin Description (Continued)

Table 24: Port 4 PIO signal assignments

Port 4 bit	Input	Output
Bit 0	TTXTREQUEST or OSDENABLE	OSDENABLE[a]
Bit 1	CFC	TXTDATAOUT[b]
Bit 2	YC[7]	YC[7]
Bit 3	ASC2_RXD	
Bit 4		ASC2_TXD [c]
Bit 5	PWM_CAPTURE2 or YC[6]	YC[6]
Bit 6	SCCG_EXTCLK	PWM_COMPARE2
Bit 7		PWM_OUT2

a. OSDENABLE output function is selected rather than PIO by interconnect configuration register CONFIG_CONTROL_C, bit 2 (CONFIG_OTHER_ALT_PIOPORT4[0]). The output can then be turned off by the MPEG video decoder to use OSDENABLE as an input.

b. TXTDATAOUT function selected by interconnect configuration register CONFIG_CONTROL_C, bit 3 (CONFIG_OTHER_ALT_PIOPORT4[1])

c. After reset, register CONFIG_CONTROL_C bit 4 must be set to 1 to pass PIO data or to use ASC2_TXD in alternate output PIO mode.

Table 25: Port 5 PIO signal assignments

Port 5 bit	Input	Output
Bit 0	IRB_IR_IN[a]	
Bit 1	IRB_UHF_IN[b]	
Bit 2		Infrared transmitter/receiver drive PPM
Bit 3		Infrared transmitter/receiver drive jack (0 or z) open drain jack output [c, d]
Bit 4	YC[5]	ASC3_TXD or YC[5][e]
Bit 5	ASC3_RXD or YC[4]	YC[4]
Bit 6	NOT_ASC3_CTS or YC[3]	YC[3]
Bit 7	YC[2]	NOT_ASC3RTS or YC[2][e]

a. The wake-up from low power mode function is enabled by interconnect configuration register CONFIG_CONTROL_D, bit 21 (RC_IRDA_DATA_IN_EN).

b. The wake-up from low power mode function is enabled by interconnect configuration register CONFIG_CONTROL_D, bit 22 (UHF_IN_EN).

c. PIO needs to be configured as open drain in alternate output mode to use infrared transmitter/receiver drive jack.

d. After reset, bit 5 in CONFIG_CONTROL_C must be set to 1 to pass PIO data or use infrared transmitter/receiver drive jack in alternate function mode.

e. Output function selected by bit 11 in CONFIG_CONTROL_E (CONFIG_OTHER_ALT_PIO_YC)

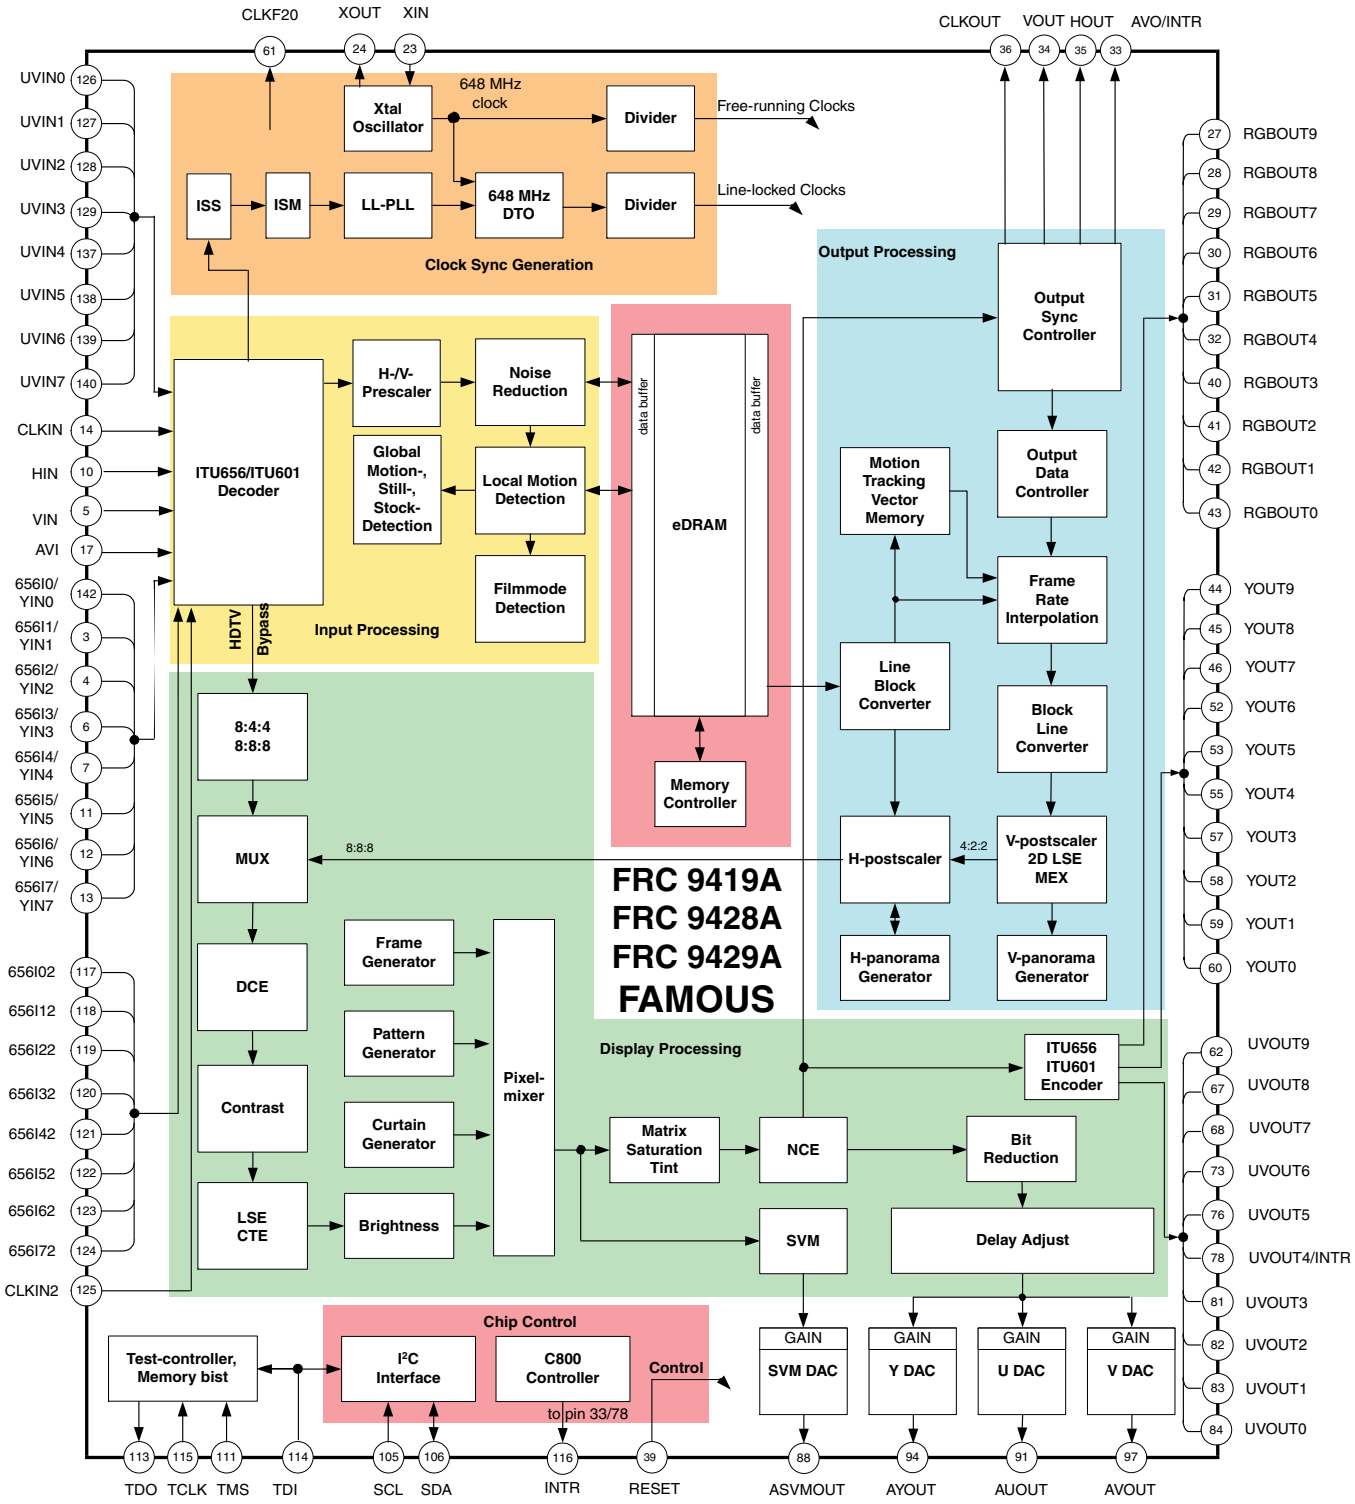
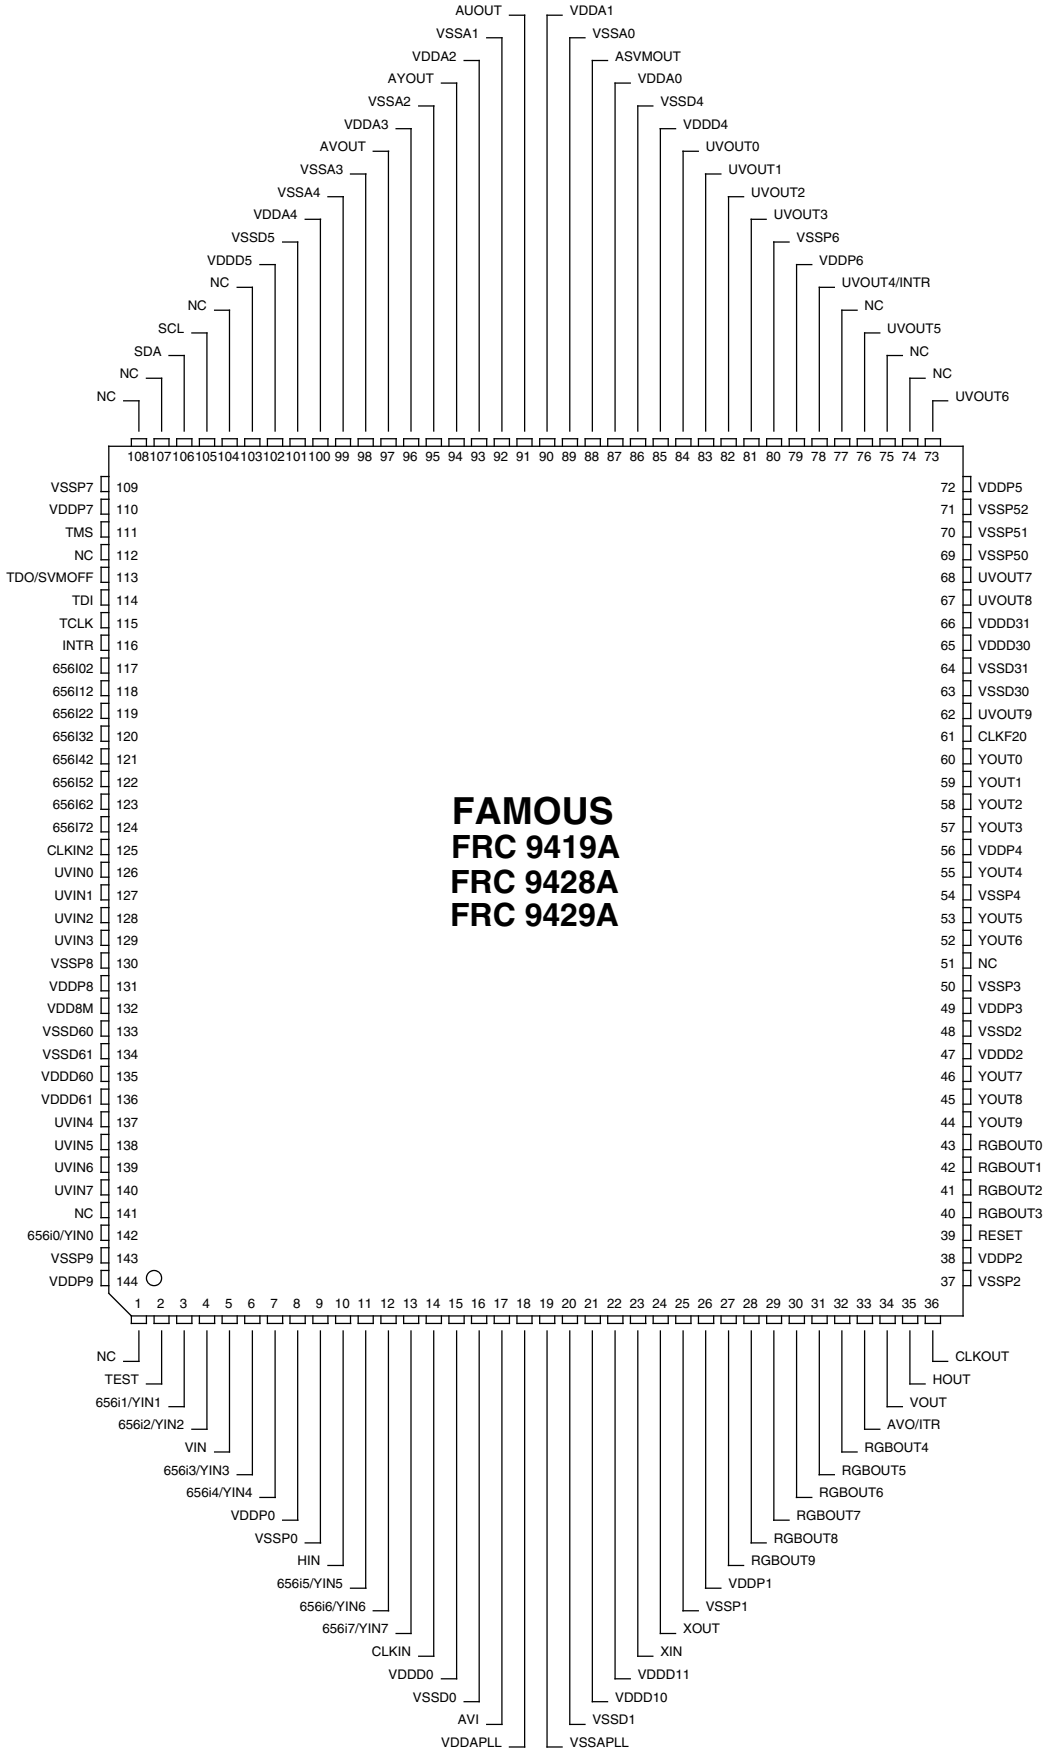
2.7.1. FRC Block Diagram

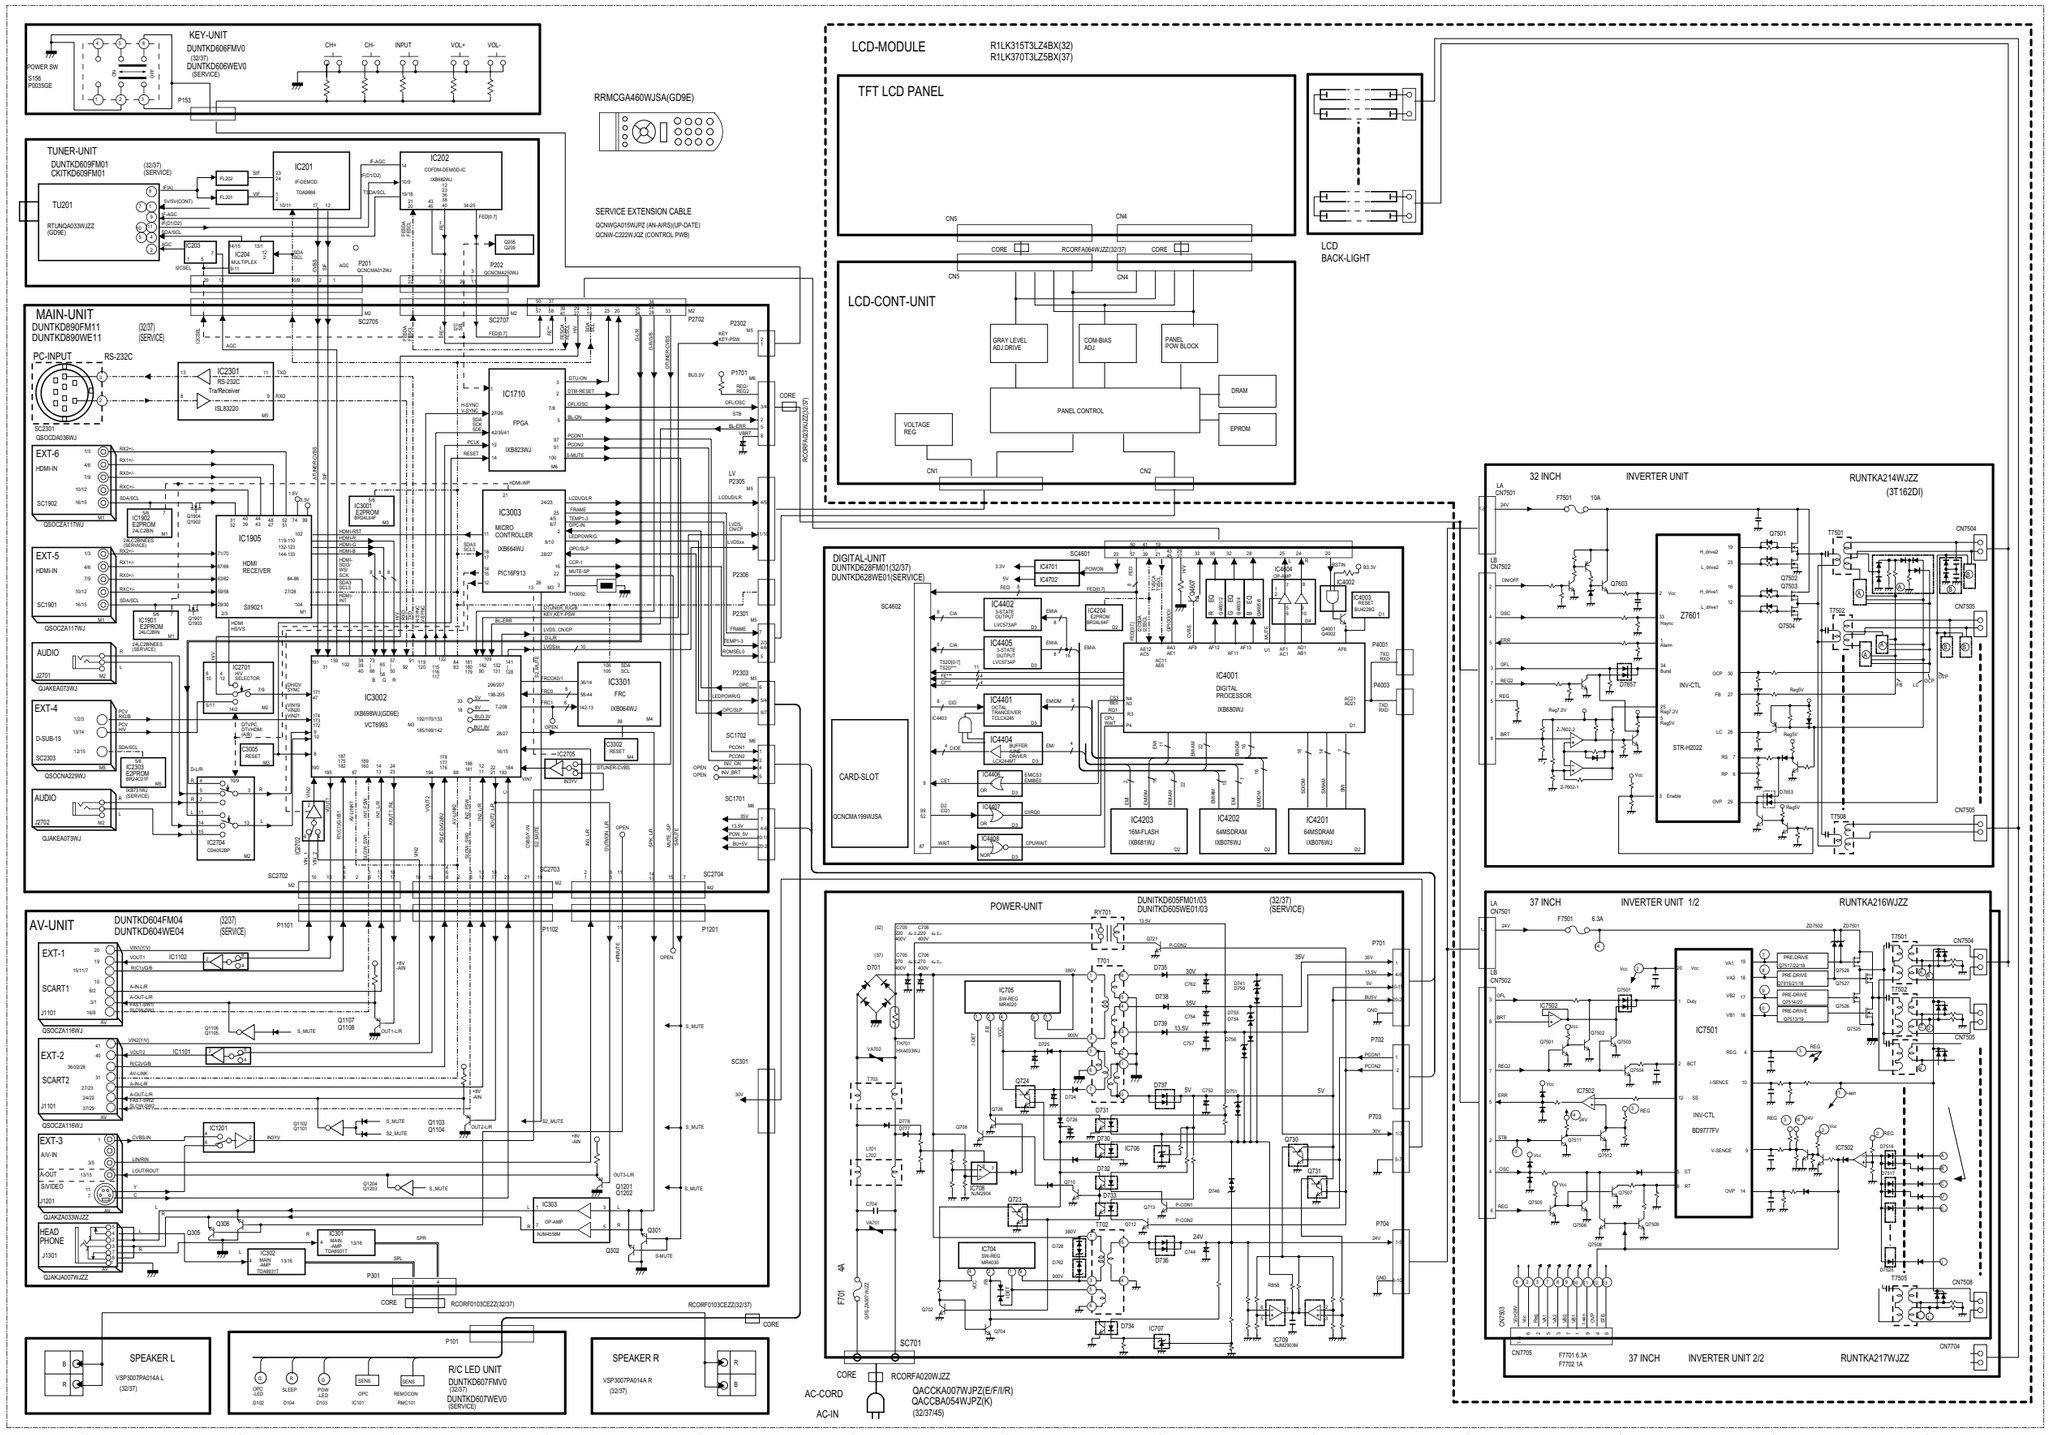


2.7.2. FRC Pinning

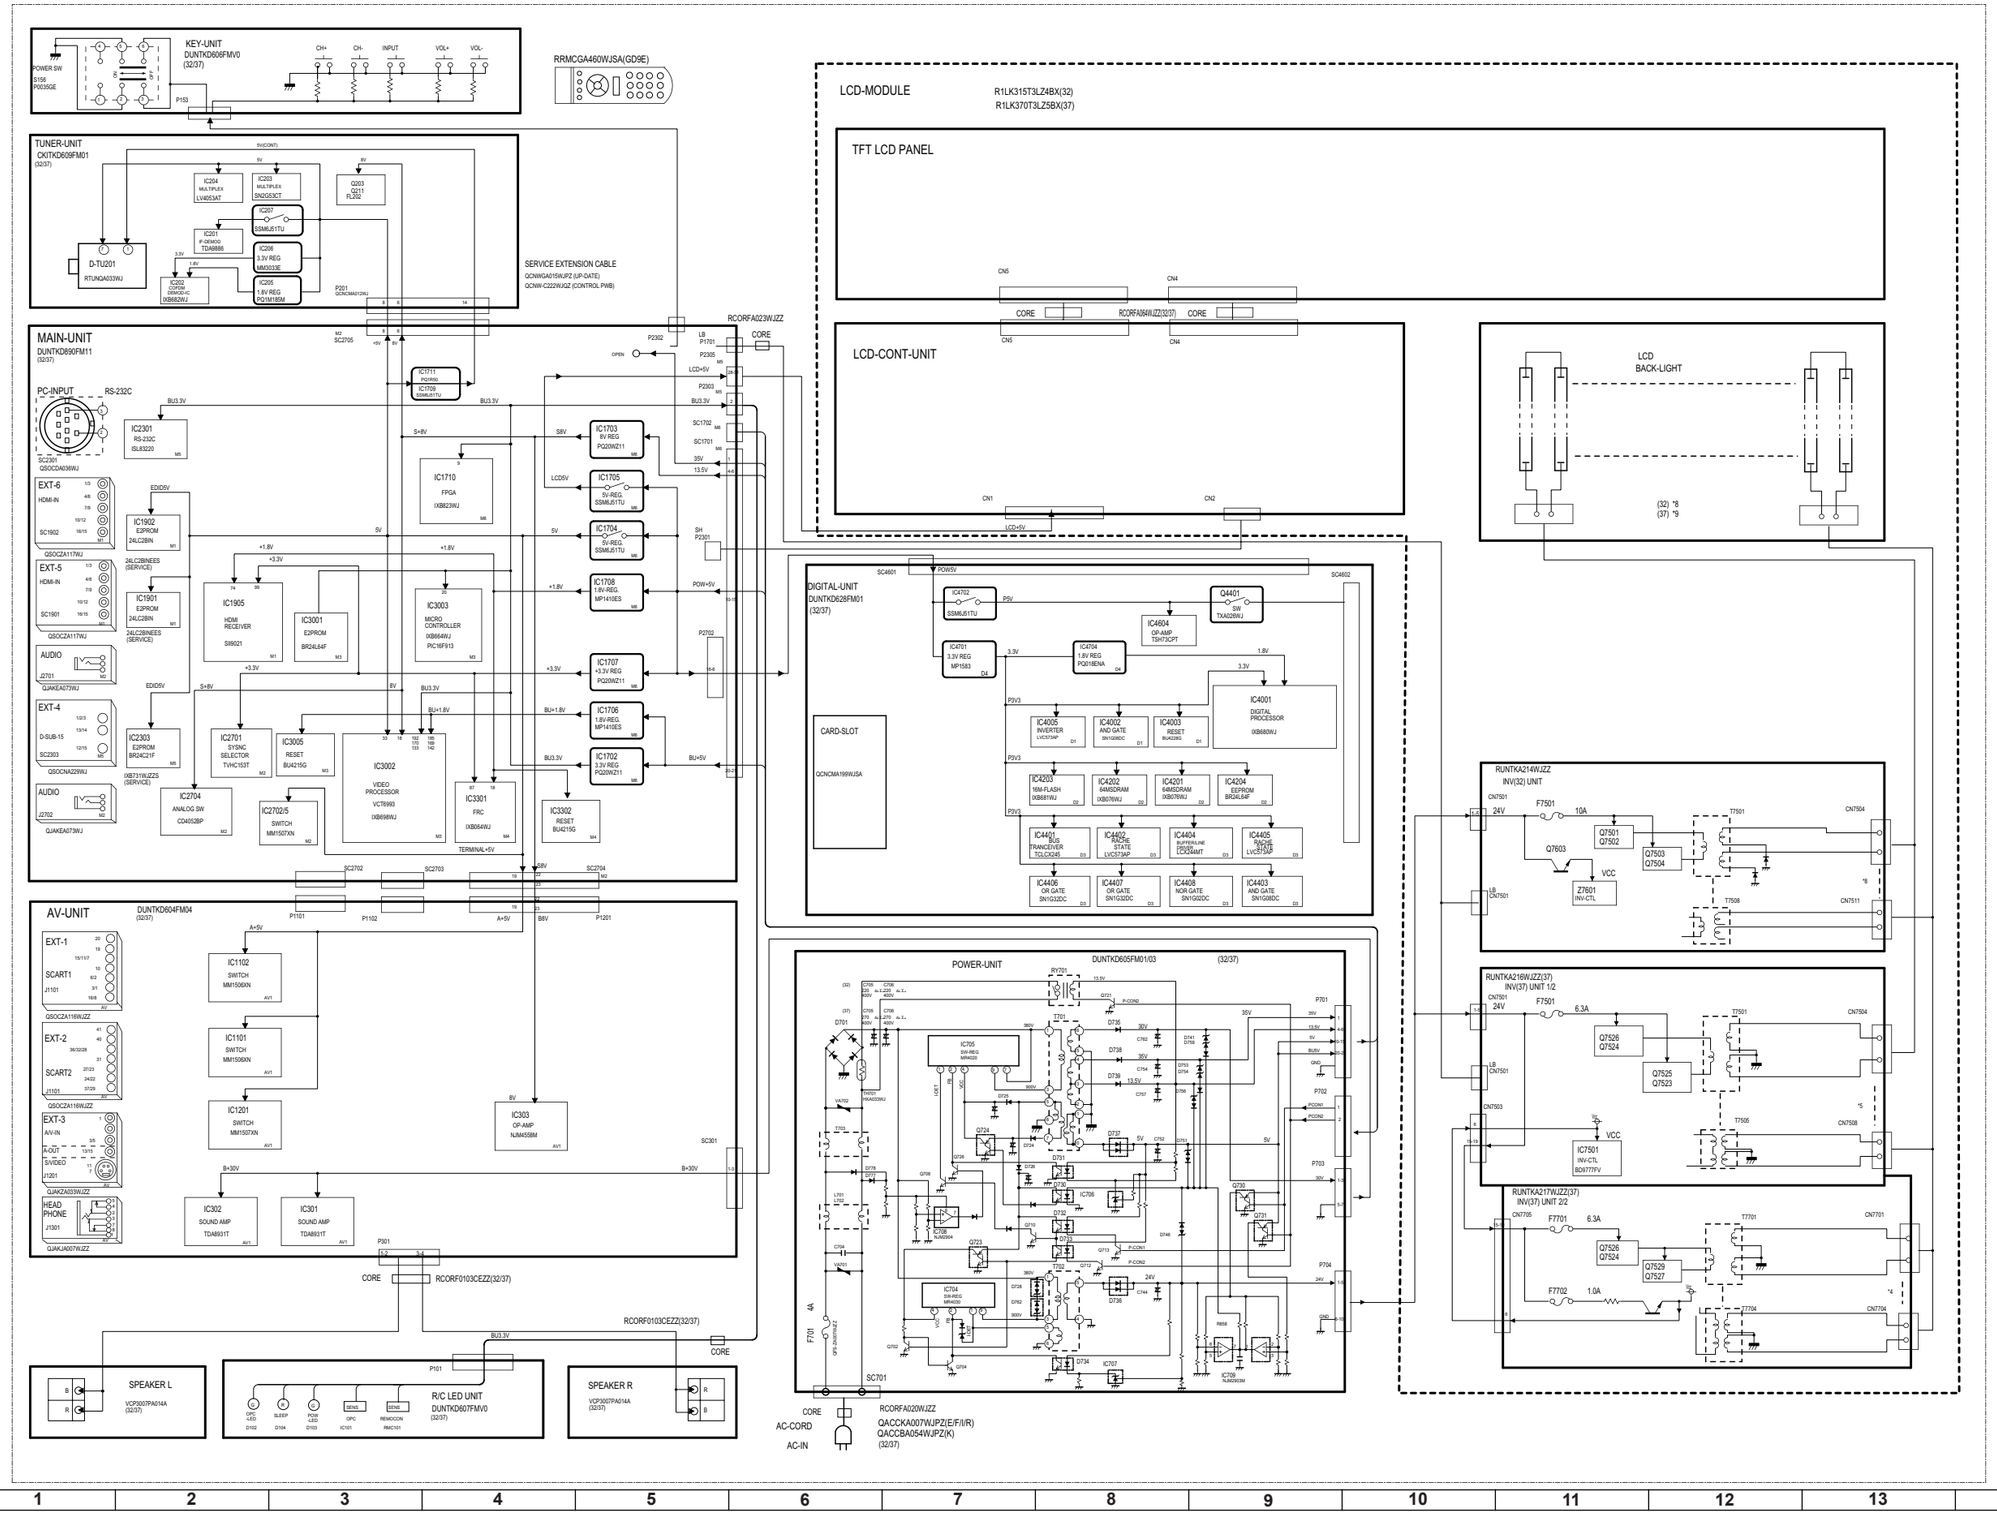


BLOCK DIAGRAM

System Block Diagram



Power-Source Block Diagram



SCHEMATIC DIAGRAMS

Description:

VOLTAGE MEASUREMENT CONDITION:

1. The voltages at test points are measured on exclusive AC adaptor and the stable supply voltage of AC 230V. Signals are fed by a color bar signal generator for servicing purpose and the above voltages are measured with a 20k ohm/V tester.

INDICATION OF RESISTOR & CAPACITOR:

RESISTOR

1. The unit of resistance "Ω" is omitted. (K=kΩ=1000 Ω, M=MΩ).
2. All resistors are ± 5%, unless otherwise noted. (J= ± 5%, F= ± 1%, D= ± 0.5%)
3. All resistors are 1/16W, unless otherwise noted.
4. All resistors are Carbon type, unless otherwise noted.

Ⓒ: Solid Ⓦ: Cement
Ⓢ: Oxide Film Ⓣ: Special
Ⓝ: Metal Coating

CAPACITOR

1. All capacitors are μF, unless otherwise noted. (P=pF=μμ F).
2. All capacitors are 50V, unless otherwise noted.
3. All capacitors are Ceramic type, unless otherwise noted.

(ML): Mylar (TA): Tantalum
(PF): Polypro Film (ST): Styrol

CAUTION:
This circuit diagram is original one, therefore there may be a slight difference from yours.

IMPORTANT SAFETY NOTICE:
PARTS MARKED WITH "⚠" ( ) ARE IMPORTANT FOR MAINTAINING THE SAFETY OF THE SET. BE SURE TO REPLACE THESE PARTS WITH SPECIFIED ONES FOR MAINTAINING THE SAFETY AND PERFORMANCE OF THE SET.

Sharp LCD-TV – XBOX 360 Setup

Sharp LCD-TV's work with the XBOX 360 using the component cable supplied with the XBOX 360 Premium Edition.
Depending on the LCD-TV that you are using, you may have to use the 3 RCA to 15-pin D-sub adapter cable supplied with the Sharp LCD-TV.

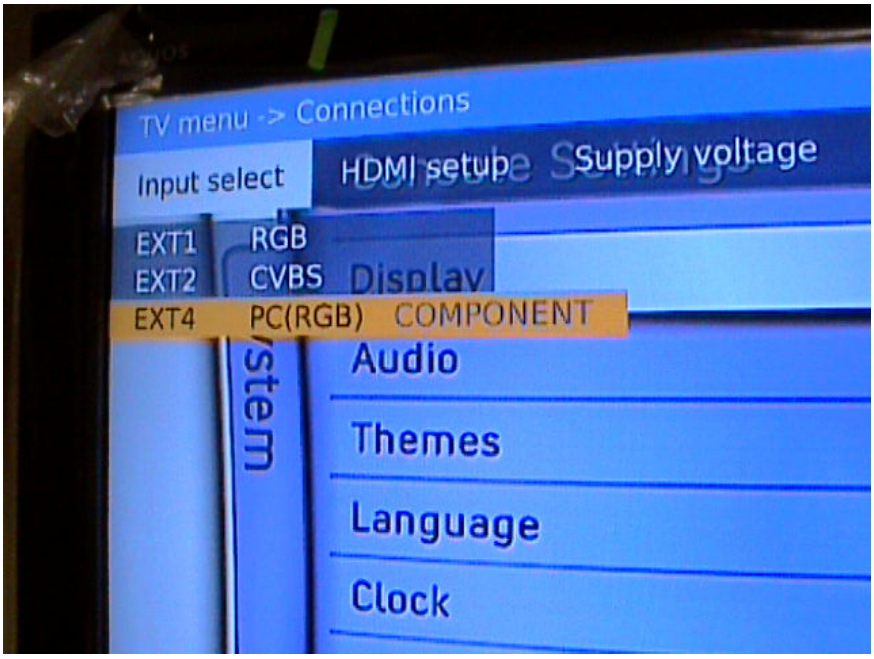
Please ensure you have the following equipment before starting:
3 RCA to 15-pin D-sub adapter (Supplied with Sharp LCD-TV)
HD AV Cable (Supplied with XBOX360 Premium Edition or can be purchased separately)
Remote control for LCD-TV
XBOX 360
XBOX 360 controller

Sharp LCD TV's can be configured to work with the XBOX 360 as follows:

Configuring your Sharp LCD-TV
Before you connect your XBOX 360, please ensure that you have told your LCD-TV that you are going to use component signal input.
Using the Sharp LC-42XD1E as an example:

1. Press the "Menu" button on the remote control.
2. Using the cursor arrows on your remote control, move to "Connections" and press the "OK" button.
3. Using the cursor arrows on your remote control, move to "Input Select" and press the "OK" button.
4. Using the cursor arrows on your remote control, move to "EXT4".
5. Using the cursor arrows on your remote control, more to "COMPONENT" and press the "OK" button
6. Press the "END" button on your remote control.

Note – Please consult you operation manual for other models.



Connecting your XBOX 360

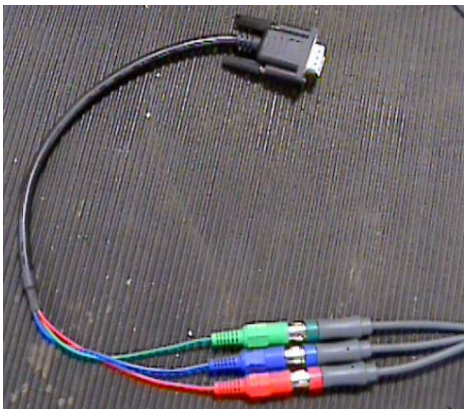
Before you can configure your XBOX 360, you need to ensure the cable to your Sharp LCD-TV has been configured correctly.

Using the HD AV Cable supplied with the XBOX 360 Premium, using the 3 RCA to 15-pin D-sub adapter cable supplied with the Sharp LCD-TV, using the Sharp LC-42XD1E as an example:

Note – Please ensure that all of your equipment is turned off.

1. Connect the HD AV cable to the XBOX 360 and ensure the settings switch has been moved to “HDTV”

2. Connect the HD AV cable to the 3 RCA to 15-pin D-sub adapter cable using the corresponding colours.



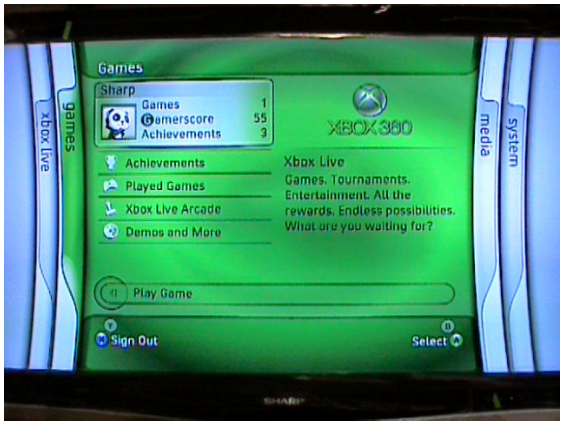
3. Connect the 3 RCA to 15-pin D-sub adapter cable to your LCD-TV.

Configuring your XBOX 360

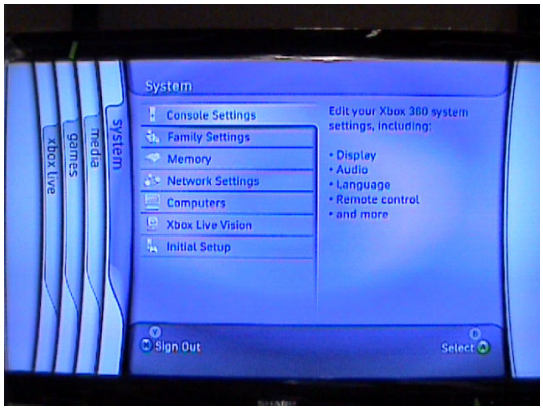
Before you connect your XBOX 360, please ensure that you have told your LCD-TV that you are going to use component signal input and ensure the cable to your Sharp LCD-TV has been configured correctly.

Using the Sharp LC-42XD1E as an example:

1. When you power on the XBOX 360, your unit will output 720P and display the following screen.

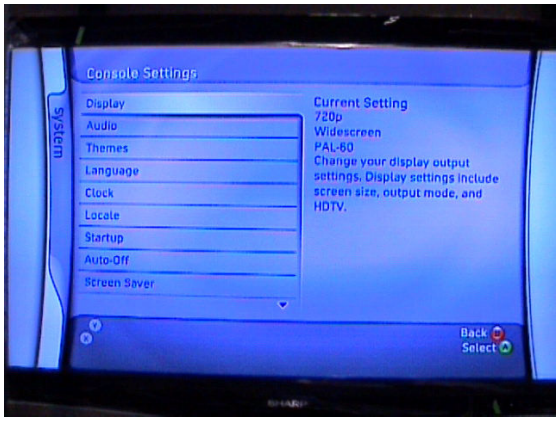


2. Using the cursor keys on your controller, move to “System”.

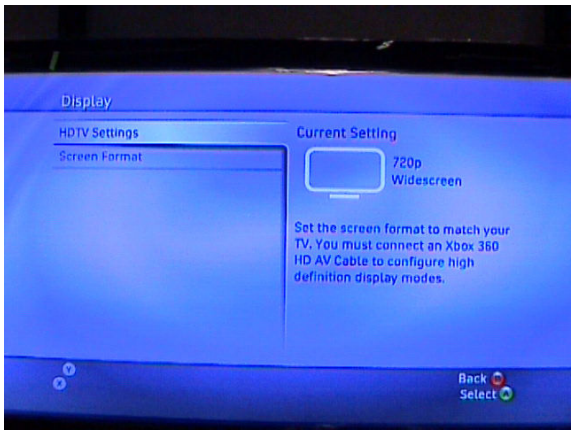


3. Press the “Select” button on your controller.

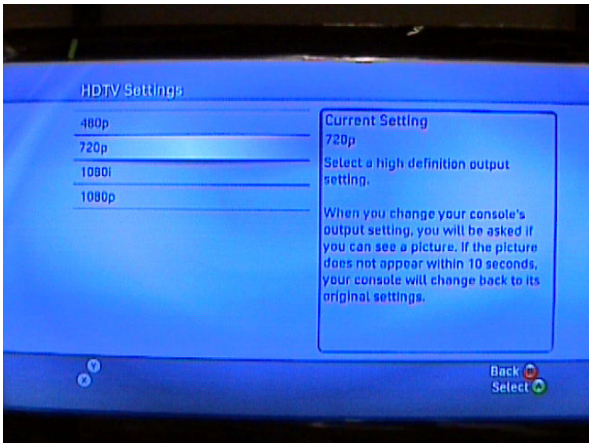
4. Using the cursor keys on your controller, move to “Display”, and press the “Select” button.



5. Using the cursor keys on your controller, move to “HDTV Settings”, and press the “Select” button.

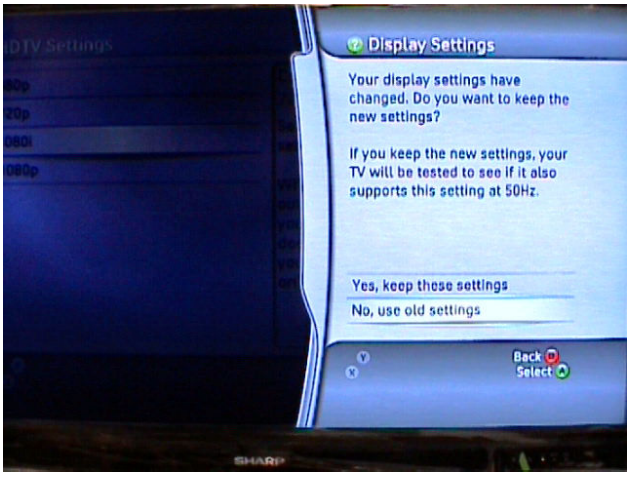


6. Using the cursor keys on your controller, move to the output of your choice, and press the “Select” button.
Note – Sharp LCD-TV’s only support 480p, 720p and 1080i output via component. 1080p is supported via the 2 x HDMI inputs (HDMI cable not available from Microsoft).

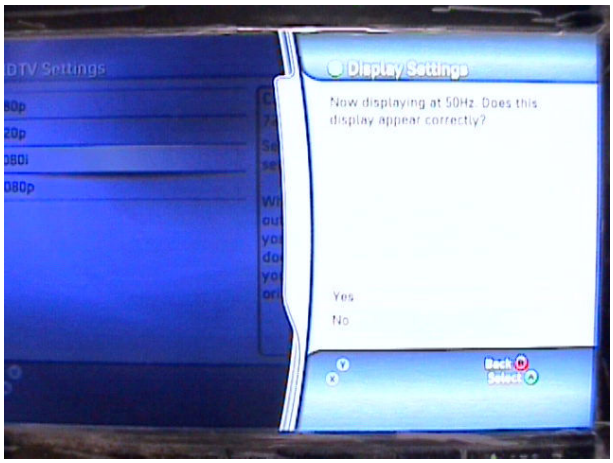


Note – This screen is only available after downloading the XBOX 360 update from XBOX Live. If the XBOX 360 update has not been applied, you can only select 720p and 1080i.

7. After selecting your output, the screen will blank for a few seconds and then display the following.



8. Follow the on-screen instructions using the cursor keys on your controller and pressing the “Select” button. The screen will blank again for a few seconds switching to 50hz. The following will be displayed.



9. Follow the on-screen instructions using the cursor keys on your controller and pressing the “Select” button.

You have now configured your XBOX 360 for use with your Sharp LCD-TV.
If you require additional support or have any questions about your Sharp LCD-TV, please contact the Sharp helpdesk on – 0870 787 4837.

Please keep with the operation manual for future reference
